Euphresco in a few words

Euphresco was initiated as a network of research programme owners and programme managers funded under the 6th and 7th EU framework programme from 2006 to 2014.

The network started with 23 organisations from 17 countries and is now composed of 70 ca. members from more than 50 countries in 5 continents.

Euphresco became a sustainable network in April 2014 and the network secretariat is hosted by the European and Mediterranean Plant Protection Organization.

Research funding under Euphresco

Euphresco's main objective is to coordinate national programmes on phytosanitary research. The liaison with other national, European and international initiatives ensures a coherent strategy for setting priorities and avoiding overlaps among projects funded under different mechanisms.
So far nine calls have been organised and more than 100 research projects have been funded.

Euphresco organises a round of calls to fund research projects every year and information on the timing and procedures can be found on the website: www.euphresco.net

Euphresco funded projects: examples

Strategies for *Ambrosia artemisiifolia* control (2008-2009).

Evaluating the risk of spread of *Scaphoideus titanus* with propagation material (2008-2009).

Development of validated procedures for whole genome amplification of DNA/RNA for quarantine plant pathogens and pests (2009-2010).

Ring test of diagnostic methods for *Pantoea stewartii* subsp. *stewartii* (2008-2009).

Development and validation of innovative diagnostic tools for detection and identification of *M. enterolobii* in support of integrated plant protection strategies (2012-2013).

Bursaphelenchus xylophilus: methods for early detection (2013-2014).

IPM strategies against Drosophilidae (2014-2016).

Harmonized protocol for monitoring and detection of *Xylella fastidiosa* in its host plants and its vectors (2016-2018).

The application of Next-Generation Sequencing technology for the detection and diagnosis of non-culturable organisms: viruses and viroids (2016-2018).

Detailed information on all the projects funded through Euphresco can be found on the website, section research projects: www.euphresco.net

The Euphresco network and you

Euphresco network is interested in establishing links with organisations from all over the world whose mission is to define, fund or manage research programmes in the phytosanitary area. Such organisations are:

- programme owners: ministries and regional authorities defining research programmes
- programme managers: research funding agencies managing research programmes.

If you work for such an organisation and you are interested in joining the network, contact Euphresco!

Euphresco is also interested in collecting information on phytosanitary research projects in order to map the scientific panorama of the international research area.

If you know about phytosanitary research projects, or if you have expertise in the domain, please contact Euphresco.
