Ideas for Social Researches − Chapter 13 − Gender Disparities....1
1 − Gender disparity in Chinese tourists travelling abroad....1
2 − Gender disparity in foreign low-skilled workers in Cyprus....1
3 − Lifetime of disparities with prevalence of young adult healthy females....1

1 − Gender disparity in Chinese tourists travelling abroad

If you will go to Irkutsk city in Russia, you will notice that gender balance in East Asian (mainly, Chinese) tourists is skewed: the most part of them are groups of females or single females. Why? What effects it will have on the future of Chinese society? Do these females prefer to emigrate from China soon, or they are deeply connected to Chinese society and will make influence on its development?

Dates: 2019. Locations: Irkutsk, Russia.

2 − Gender disparity in foreign low-skilled workers in Cyprus

If you will go at weekend to embankment of Limassol or to some local Catholic church at the day of religious holiday, then you will notice that gender balance is extremely skewed in low-skilled female immigrant workers: the most part of them is from Southern Indostan (or maybe also from Bengalia), and the most part of them is represented with young females. It is easy to understand why it happens, but such situation may have different social effects (inside community of migrants and inside local society), especially considering relative isolation of Cyprus from other parts of Europe. These effects should be researched.

Dates: 2010 − 2011. Locations: Limassol and Nicosia, Cyprus.

3 − Lifetime of disparities with prevalence of young adult healthy females

As you can see, only two interesting disparities have been found in 140+ cities/towns/villages located in 30+ countries without any special search. So, it is rather rare phenomenon, especially if we will consider disparities with prevalence of young adult healthy females (and in one of cases, middle class and upper middle class females). That's why, it is good idea to research general rules underlying the process of appearing of such disparities, and how long such disparities can exist until being discovered by males with appropriate sexual interests.
