- (1) Namespace id is defined in the PDS4 Information Model. It is a namespace container for a logical grouping of classes and attributes and is assigned by the steward. Namespace id is often mapped to the namespace prefix defined in XML documents.
- (2) The Namespace id used to create a URL for a mission level dictionary requires the prefix "mission".
- (3) The default namespace and namespace prefix, in an XML Schema file, is null.
- (4) The Schema File Name Prefix typically has a suffix that includes the version number of the dictionary, for example PDS4_PSD_1400.
- (5) The PDS Change Control Board (CCB) provides oversight by reviewing and approving all changes to the Common Dictionary.
- (6) The Steward lead field indicates the lead entity within the stewardship group. This entity and the members of the group can change as needed. The steward id should not change.
