Abstract: In the article, the author describes the role of the reforms implemented in New Uzbekistan in social development, turning the country into an all-round prosperous and prosperous country with strong potential and a decent reputation in the world arena, as well as the development strategy of New Uzbekistan as a whole that unites our people towards common goals. it is justified that it is a spiritual basis.

Key words: New Uzbekistan, spiritual potential, state, development, reform, society, human value, social renewal.

In order to turn spiritual potential into a factor of social development in Uzbekistan, it is not enough to determine the main tasks of state policy and management mechanisms for its improvement. At the same time, it is necessary to determine the prospects of rational use of the spiritual potential of the society. It is important to describe in detail the necessity and possibilities of using the existing spiritual authority, especially in the period of large-scale reforms aimed at building the New Uzbekistan and creating the foundations of a new society.

Possibilities and perspectives of rational use of spiritual potential in our country are consistent with the priorities of the reforms being implemented. In other words, whatever goals are aimed at the realization of today's reforms, the moral potential, which has been taken by the state and is managed rationally, will allow to achieve those goals in the near future. It is known that the priorities of social reforms in Uzbekistan are as follows:

- establishing a people-friendly state by increasing human dignity and further developing a free civil society;
- making the principles of justice and the rule of law the most basic and necessary condition for development in our country;
- rapid development of the national economy and ensuring high growth rates;
- conducting a fair social policy, developing human capital;
- ensuring spiritual development and bringing the industry to a new level;
- approach universal problems based on national interests;

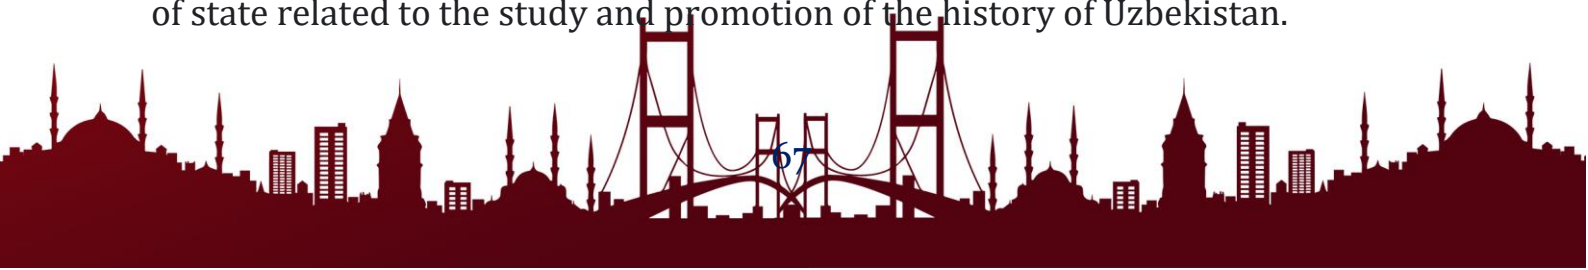

- strengthening the security and defense potential of our country, conducting an open, pragmatic and active foreign policy.

Therefore, the spiritual potential of the society can be used to solve the goals in these directions.

Spiritual potential can be used "in building a people-friendly state by increasing human dignity and further developing a free civil society." During the fundamental reforms in this direction, increasing the social importance of the neighborhood institution, strengthening the role of the Council of People's Deputies and local authorities in solving various social problems, improving the state administration system, developing the "electronic government", improving the quality of the civil service system, creating a new way of communicating with the people. it is planned to achieve important goals such as introduction of mechanisms, strengthening of public control. In the realization of these goals, the moral potential of society can serve as an important foundation.

We believe that, taking into account the possibilities and prospects of using spiritual potential in ensuring spiritual development in Uzbekistan, it is necessary to pay attention to the following:

- Development of the "Concept of the use of spiritual potential in ensuring spiritual development" and defining the specific mechanisms of its implementation;
- to determine the measures of using the factors that ensure the health of the spiritual and spiritual environment, interpersonal relations compatible with social interests, to turn creativity into a national movement in the country;
- development and implementation of a set of measures aimed at improving the culture of reading, making visiting information-library centers a social norm;
- to activate the publication of the works of specialists dedicated to the heritage of ancestors under the heading "Great scientific heritage" based on the state order;
- creation of a fund of works of thinkers and specialists dedicated to the strategic importance of the environment of inter-ethnic harmony and inter-religious tolerance in the society, ways to strengthen it;
- creation of an exemplary school for young artists by organizing exhibitions of unique masterpieces of literature and art in regional centers;
- taking measures to systematically implement the initiatives of the head of state related to the study and promotion of the history of Uzbekistan.

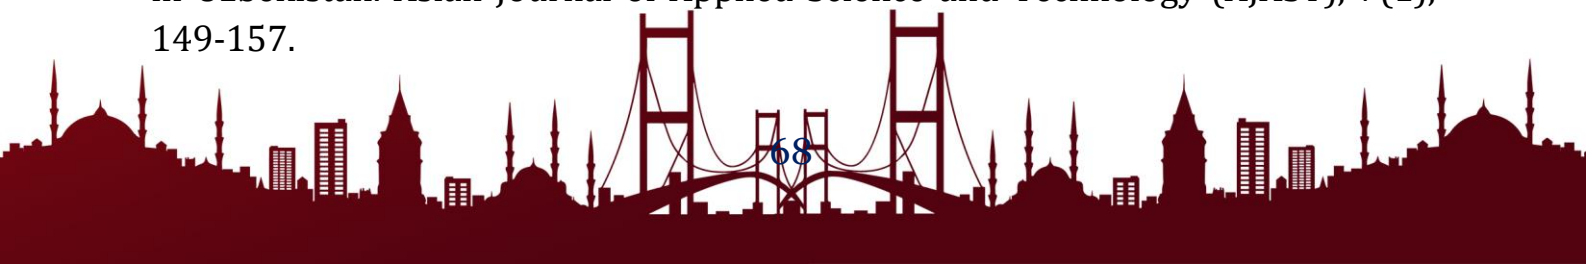

We hope that these proposals will be useful in accelerating the spiritual development of Uzbekistan and making wider use of the spiritual potential of the society.

To conclude, in order to turn the spiritual potential of the society into a factor that accelerates social development, it is necessary to determine the prospects of its rational use. These perspectives should be coordinated with the priorities of the reforms being implemented. Thinking from this point of view, today the main directions of the strategy of building a new Uzbekistan from the spiritual potential of the society are to build a people-friendly state, ensure the rule of law, rapidly develop the national economy, conduct a fair social policy, ensure spiritual development, and the impact of universal problems on Uzbekistan. It will be necessary to use it more widely in reducing and strengthening the country's security and defense potential.
