

# Experiment 4: Ratings Analyses

2023-02-24

## Contents

<b>Setup</b>	<b>1</b>
<b>Likeability</b>	<b>3</b>
<b>Accomplishment</b>	<b>5</b>
<b>Importance</b>	<b>8</b>
<b>All Ratings</b>	<b>10</b>

## Setup

Variable names:

- Experiment: exp4\_\_
- Data (\_\_d\_\_)
  - d = main df
- Models (\_\_m\_\_)
  - like = Likeability ratings
  - acc = Accomplishment ratings
  - imp = Importance ratings
  - ratings = build model with all 3 ratings

```
exp4_d <- read.csv("../data/exp4_data.csv",  
                  stringsAsFactors = TRUE) %>%  
  rename("Participant" = "SubjID", "Item" = "Name") %>%  
  select(Participant, Condition,  
         GenderRating, Item, Male, Female, Other,  
         Likeable, Accomplished, Important)  
str(exp4_d)
```

```
## 'data.frame':   8771 obs. of  10 variables:  
## $ Participant : Factor w/ 1253 levels "Exp4_P1","Exp4_P10",...: 520 520 520 520 520 520 520 1143 1143 ...  
## $ Condition   : Factor w/ 3 levels "first","full",...: 1 1 1 1 1 1 1 1 1 ...  
## $ GenderRating: num  6.24 2.61 6.82 5.34 1.28 4.39 3.87 5.22 1.24 5.86 ...  
## $ Item        : Factor w/ 63 levels "Ashley Cook",...: 1 18 21 22 25 28 50 5 7 15 ...
```

```
## $ Male      : int  0 1 0 0 1 1 1 1 1 0 ...
## $ Female    : int  1 0 1 1 0 0 0 0 0 1 ...
## $ Other     : int  0 0 0 0 0 0 0 0 0 0 ...
## $ Likeable  : int  2 1 3 2 4 3 3 3 2 4 ...
## $ Accomplished: int  1 2 1 4 2 2 2 5 3 3 ...
## $ Important : int  2 1 5 5 1 4 3 3 2 2 ...
```

Center gender rating for names: Original scale from 1 to 7, with 1 as most masculine and 7 as most feminine. Mean-centered with higher still as more feminine.

```
exp4_d %<>% mutate(GenderRatingCentered =
  scale(GenderRating, scale = FALSE))
```

Set contrasts for name conditions, now weighted to account for uneven sample sizes. This uses Scott Fraundorf's function for weighted contrasts. (The psycholing package version doesn't support doing 2v1 comparisons, only 1v1.) Condition1 is Last vs First+Full. Condition2 is First vs Full.

```
source("centerfactor.R")
contrasts(exp4_d$Condition) <- centerfactor(
  exp4_d$Condition, c("last", "first"))
contrasts(exp4_d$Condition)
```

```
##           [,1]      [,2]
## first  0.3312051 -0.497605746
## full   0.3312051  0.502394254
## last   -0.6687949  0.002394254
```

Flip ratings from 1=most likeable/accomplished/important to 7=most L/A/I, to make interpreting models easier, then mean-center.

```
exp4_d %<>% mutate(
  LikeableFlip = recode(Likeable,
    '1' = 7, '2' = 6, '3' = 5, '4' = 4, '5' = 3, '6' = 2, '7' = 1),
  AccomplishedFlip = recode(Accomplished,
    '1' = 7, '2' = 6, '3' = 5, '4' = 4, '5' = 3, '6' = 2, '7' = 1),
  ImportantFlip = recode(Important,
    '1' = 7, '2' = 6, '3' = 5, '4' = 4, '5' = 3, '6' = 2, '7' = 1),
  LikeableCentered = scale(LikeableFlip, scale = FALSE),
  AccomplishedCentered = scale(AccomplishedFlip, scale = FALSE),
  ImportantCentered = scale(ImportantFlip, scale = FALSE))

str(exp4_d)
```

```
## 'data.frame':   8771 obs. of  17 variables:
