

P1	Mild	It's speed is ok	It's a little bit small	
P2	Mild	Currently nothing to say	Heavy and makes me feel tired	
P3	Mild	更准确清晰，容易选择	幅度大，目标小的时候选择比较困难	
P4	Mild	Good sensitivity	Na	
P5	Mild	Appeared to move at same rate as my head	Sensitive to small movements	Selecting targets was easier when they were closer together. Fine horizontal movements were harder at the bottom targets (head bent forward) than at the top targets
P6	Mild	move quickly	It's hard to target at very small point	
P7	Mild	the speed is suitable for me	hard to choose a correct target	
P8	Mild	It seemed to be in control, better than previous. Or may be I am just getting used	None	Covering long distance was easy/i was in control. But, small targets were hard to localize. I was feeling this
P9	Mild	nothing	it was somehow small for me	
P10	Mild	better than the two cursors I used 20mins ago	still hard to select targets precisely	very annoyed after 45 mins doing this job
P11	Mild	...	felt shifted again to the left a bit sometimes i felt its deaccelerating when near by the targerts maybe it was just me	
p12	Mild	The speed was better than the first cursor.	sometime needs more accuracy.	
P13	Mild	easily moving	very fast moving	
P14	Mild	I felt more in control	Less sensitive than the low and middle cursers, hence needs extra effort	
P15	Mild	This was well targated and precise	It was alright	
P16	Mild	It was easy then the last time	nothing	
P17	Mild	The movement was smooth without any lags	A bit too sensitive	

P18	Mild	needed a lot of movement of the neck to select the location.	nothing	
P21	Mild	speed	It's too heavy	
P19	Mild	speed and accuracy	selecting targets with neck movements is difficult	
P20	Mild	More continuity when aiming. No jumping	It sometimes felt as if it took curved paths when I was trying to go from one place to another in a straight line,.	
P25	Mild	no discomfort of my neck	none	
P26	Mild	moving speed	nothing	
P27	Mild	For smaller distances and larger targets, it was really easy and accurate to control at higher speeds	When the targets were smaller or further apart, it was tougher to control the cursor to be accurate and fast	
P22	Mild	Easier to control	Nothing	
P23	Mild	it's more precise though	so precise that i missed quite a lot in this round	
P28	Mild	It is accurate	In some rounds the cursor may be too small to fit in the circle	None
P24	Mild	Excellent tracking of motion	Bulky and heavy	
P1	Middle	It's ok	There aren't big differences between 4 levels of speed	
P2	Middle	Fun	It is truly heavy for me, I felt a bit tired when doing the second test.	
P3	Middle	有代入感，真实的，非常有趣	光标有时会偏移，这让我有些头晕，有时画面会模糊不清	
P4	Middle	Good for short distances	Bad for far distances	
P5	Middle	Moved at the same speed as my head	Don't know	It felt when I tried to move it, the cursor more often followed an arc than a line.

P6	Middle	clear instructions given on the screen	too sensitive to select the point (finish the target)	
p7	Middle	it is so quick	my eyes feel uncomfortable.	
P8	Middle	I don't know why, but the sense of control is getting better and better.	None	This time the headset was also fitting very well - I felt.
P9	Middle	speed was more comfortable	it was demanding to catch small circles	
P10	Middle	didn't like it at all after above 30 mins selecting selecting and selecting	hard to select targets precisely	annoyed by small targets more than far targets
P11	Middle	was easy to use	it was hard to select targets while on bigger circle diameter and smaller radius	
p12	Middle	the speed and ability to control	sometimes , it is over my control.	
P13	Middle	easily controllable	nothing	
P14	Middle	It feels more like I got used to the curser, other than that I find no big difference.	The curser felt more sensitive to the head movement.	
P15	Middle	It was snappy and well calibrated	Sometimes it was a little difficult to follow	
P16	Middle	It stayed near the target as i wanted	it was slightly difficult to move the cursor compared to previous round	
P17	Middle	Good pace	Difficult to control compared to High cursor	
P18	Middle	handly	nothing	
P21	Middle	nothing	heavy	
P19	Middle	I felt quite in control of the cursor, even though i still missed quite a few targets	it was difficult to precisely select the targets with only neck and eye movements	
P20	Middle	Felt smooth	Tiring to use, felt like I needed to move a lot for a small distance, and not much for longer distance	

P25	Middle	the speed is normal this time.	I was trying to use high speed to approach the target and use low speed to make it precisely. However, if I use different speed in different orientations, the angle of view seems like to be moved and I cannot see the target in the middle, as a result the target is not clear for me because I have shortsightedness (maybe).	
P26	Middle	REALITY	moving speed	
P27	Middle	It matched my head movement the majority of the time	It occasionally drifted, making it hard to control at times	
P22	Middle	Larger	Sometimes felt off centre/had to tilt head in slightly awkward position	
P23	Middle	it reacts precisely when I move my head to the target	it's too small	the HMD is a bit too heavy
P28	Middle	The moving speed is fit	It had to be precise in some occasions	None
P24	Middle	Bright and easy to keep track	Position went off track sometimes, hence requiring greater head movement to move the cursor from one point to another.	
P1	Low	The speed is more suitable	Nothing	
P2	Low	Fun and interesting	A bit heavy for me to control.	
P3	Low	更易选择，更不容易偏移	头部幅度大的时候容易头晕	
P4	Low	Na	Na	
P5	Low	Seemed to follow my head	Had to move my neck too much when targets were far apart	Mild fatigue began to affect my accuracy
P6	Low	sensitive	heavy	

P7	Low	easy to choose	head tuen over	
P8	Low	I could follow a strategy. Move quickly first and then slow down near target in the linear movement. The control allowed me to come up with this strategy.	None.	May be I was getting better with practice.
P9	Low	nothing	color was somehow tiring	
P10	Low	easy to control	hard to select precisely especially when targets are small and far	
P11	Low	no idea	felt too slow not sure	
p12	Low	sometime , for specific occasion it can be control able, for instance the time the the circle dimension has increased	in some occasion , it was too slow.	I think based on different distance between each target the speed should be calibrated .
P13	Low	easily controlable	nothing	
P14	Low	Easy to recognise	Didn't feel entirely in control, it was moving faster than anticipated	
P15	Low	Would prefer a little faster	It was alright	
P16	Low	It was more precise then last round	It was little stiff to move the cursor	
P17	Low	cursor speed was a bit slower compared to the Mild Cursor which made it a bit easier to align it with the dots	-	
P18	Low	easy functionality	nothing	
P21	Low	speed	It's way too heavy	
P19	Low	more accurate selection	a lot of quick head and neck movements	

P20	Low	Felt like I had complete control, felt like it came naturally	I can imagine it might get a bit tiring after some time, because I did need to move my head around a bit	
P25	Low	easy to control	none	
P26	Low	high reality	precision is low	
P27	Low	Over short periods of time, it felt like I could select smaller targets more precisely	Although I could initially select small targets precisely, I became more fatigued over time which made this difficult	This cursor quickly became unpleasant to use
P22	Low	visible	Quite small	
P23	Low	It's bigger somehow	it's not at the centre of the sight though, I had to shake my head more	
P28	Low	The speed is adaptable	The cursor may move over the distance	None
P24	Low	Responsiveness	It's causing dry eyes and mild headache after usage	
P1	High	It's ok	It's too sensitive	
P2	High	Currently nothing	Heavy, and the position of point would slightly change	
P3	High	更加准确，没有模糊情况	有时光标有偏移，但是可以接受	
P4	High	Not sure	Very sensitive	
P5	High	Ratio of cursor range to head movement was an improvement on the low speed.	Nothing in particular	It is very easy to overshoot when adjusting head position. I'm also beginning to suspect that the names for the cursor speeds are misleading
P6	High	Broad view	The circles in the corner which requires a big movement of my head is very hard to see them clearly.	
P7	High	it's more quicker to select the target	hard to choose a correct one	

P8	High	color was distinguishable easily	I couldn't tell whether I had to situate the cursor dot completely inside the target	The objects were a bit blurry - may be because of my condition on one eye - keratoconus.
P9	High	the higher speed allowed me to choose circles	due to speed sometimes I have missed especially for the small circles centre points	
P10	High	better than others	couldn't select targets precisely	each speed may have its own proper target distance to help select precisely, but small size of targets is really annoying
P11	High	nothing :D	felt shifted to the right making me having weird head tilt	
p12	High	the cursor was so accurate.	The speed of the cursor was high for me .	
P13	High	easily controlable	nothing	
P14	High	Movement speed	Too sensitive, and sometimes jumps distance and out of sync with my head	
P15	High	It was alright	Could be a little precise	
P16	High	It was easy to control	Nothing	
P17	High	Good enough speed to align with the circles with precision	Took extra effort to move it down	
P18	High	easily controllable	selecting the target on the bottom and left was difficult and needed more attention.	
P21	High	nothing	It's too heavy and presses my face	
P19	High	it felt like i could select the targets more accurately	it is hard to be precise with only neck and eye movements	
P20	High	It moves fast	lose control with rapid movement	

P25	High	this cursor is more stable when moving on a low speed, compared with the slower cursor	if moving fast, it is hard to control the position	I think there is a threshold between low speed and high speed, and it is connected incontinuously.
P26	High	nothing	nothing	
P27	High	It seemed to accurately match my head movements without drifting	It sometimes felt like I had to move my head further than expected to select the targets	
P22	High	:/	Harder to control,required more awkward neck positions	
P23	High	it's more precise	still quite small when choosing the target in the bigger field	
P28	High	The cursor is clear for participants to choose and the feedback is swift	The cursor was still moving while the participant wished to stop	I may suggest to consider the device's weight as a factor within the experiment
P24	High	The motion tracking is responsive	Causing slight neck fatigue after using
