

**NAME**

**mbm\_stat** – Extract beam statistics from output generated by mbinfo.

**VERSION**

Version 5.0

**SYNOPSIS**

**mbm\_stat** *-Ifile* [*-V -H*]

**DESCRIPTION**

**mbm\_stat** is a perl shellscript that extracts beam statistics from the output of **mbinfo**. The output of contains the base name of the data file, then number of hours of data in the data file, and the percentage of dropped and flagged beams. One line of output for each run of **mbinfo** is generated. This allows **mbm\_stat** to be run on accumulated data such as might be generated by logging the daily mail statistics. Columns are tab delimited.

**MB-SYSTEM AUTHORSHIP**

David W. Caress  
Monterey Bay Aquarium Research Institute  
Dale N. Chayes  
Center for Coastal and Ocean Mapping  
University of New Hampshire  
Christian do Santos Ferreira  
MARUM - Center for Marine Environmental Sciences  
University of Bremen

**ALSO CONTRIBUTED TO THIS PROGRAM**

Suzanne H. O'Hara  
Lamont-Doherty Earth Observatory

**OPTIONS**

- H** This "help" flag cause the program to print out a description of its operation and then exit immediately.
- I** *file*  
Data file to be processed which contains the output of one or more executions of **mbinfo**.
- V** Causes **mbm\_stat** to operate in "verbose" mode so that it outputs more information than usual.

**BUGS**

Too simple to have any really interesting bugs.
