Join The SEISMEC Shift

SEISMEC aims to find the right balance between disruptive technology and human-centricity in the brand-new Industry 5.0 paradigm.

The project will show how workers' empowerment and industrial competitiveness are complementary forces that can only be balanced via fair and ethical digital practices and a careful exploration of key empowerment factors: our CAPS framework.

SEISMEC will shape a future of work that is both productive and enriching, with a focus on creating sustainable work environments that prioritize employee well-being and fulfilment.
