I picked up this book hoping to understand why our economy seems so disconnected from environmental issues, and wow, it really opened my eyes! The author makes a fascinating point about how we humans think we're the center of everything, but in reality, we're just lucky to have this one habitable planet. What really got me thinking was how economics could learn from physics - I mean, physics has been studying how the universe works forever, right?

The book gets pretty deep when it talks about quantum theory and redefining value, but I love how it connects these big ideas to real problems like climate change and AI. Sometimes it felt a bit over my head, but I appreciate how it challenges traditional economic thinking. If you're worried about where our world is heading, this book offers a fresh perspective on how we might fix things.
