Summary

This layer consists of habitat validation (ground truthing) data collected in the context of "Reposidonia: Mapping Posidonia meadows in Kythros island" project. The methodology includes circumnavigation with a boat, snorkelling/apnea and the use of an ROV (Remotely Operated Vehicle) for bigger depths. The project was implemented by iSea and funded by the CSR donation initiative of "Potamitis Vekris Law Firm". The final mapping product was produced in collaboration with terraSolutions mer.
