Abstract

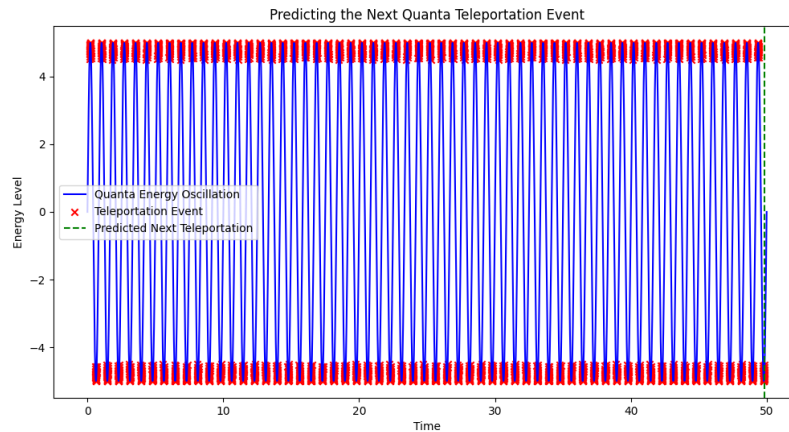

This document provides a comprehensive exploration of our research into quantum teleportation, wormhole stabilization, and structured energy flow across universes. We present visual foundations, simulation results, implications that suggest the existence of a controllable multiversal transportation network. Additionally, we explore the potential of using gravitational wave resonance and dark matter stabilization to engineer stable energy pathways between space-time coordinates.

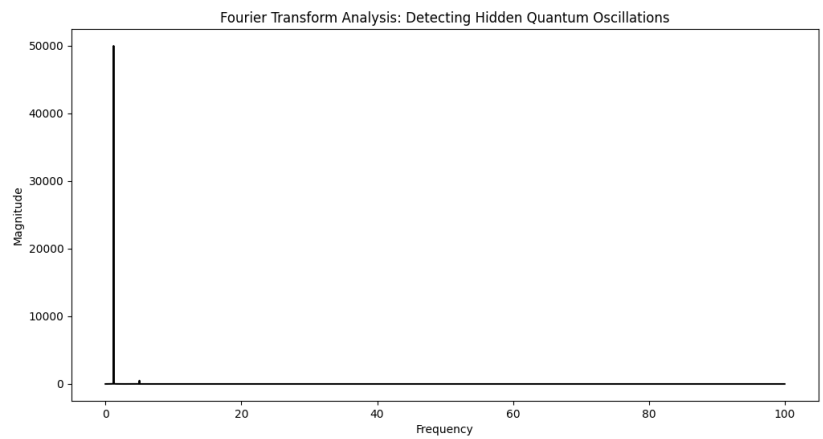

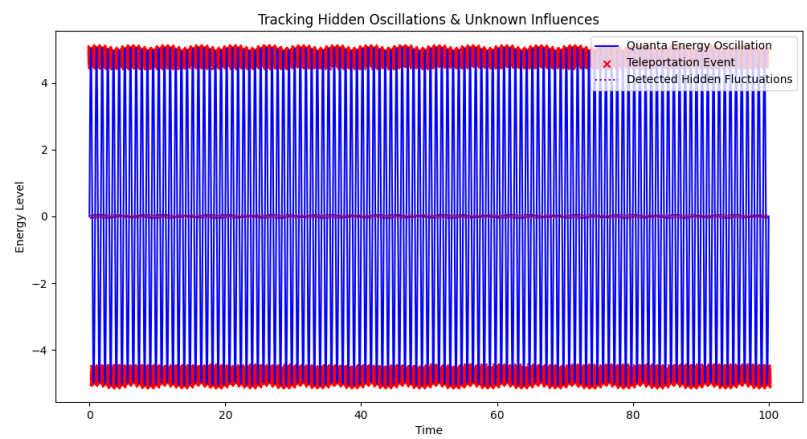

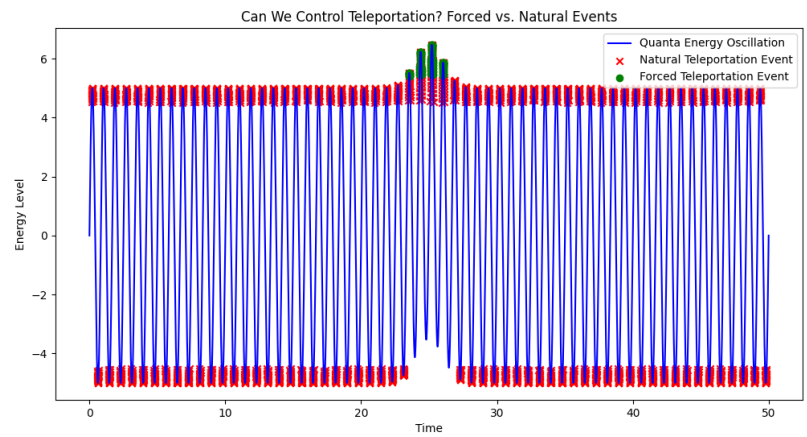

1 Introduction

Our research began with an exploration of quanta behavior in relation to gravitational wave distortions, leading to an understanding of how structured energy pathways could enable controlled teleportation. Through simulations and mathematical derivations, we uncovered the role of dark matter as an energy stabilizer and the potential for engineered wormhole networks.

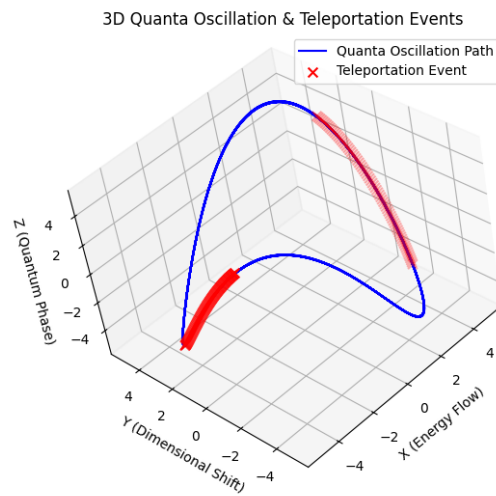

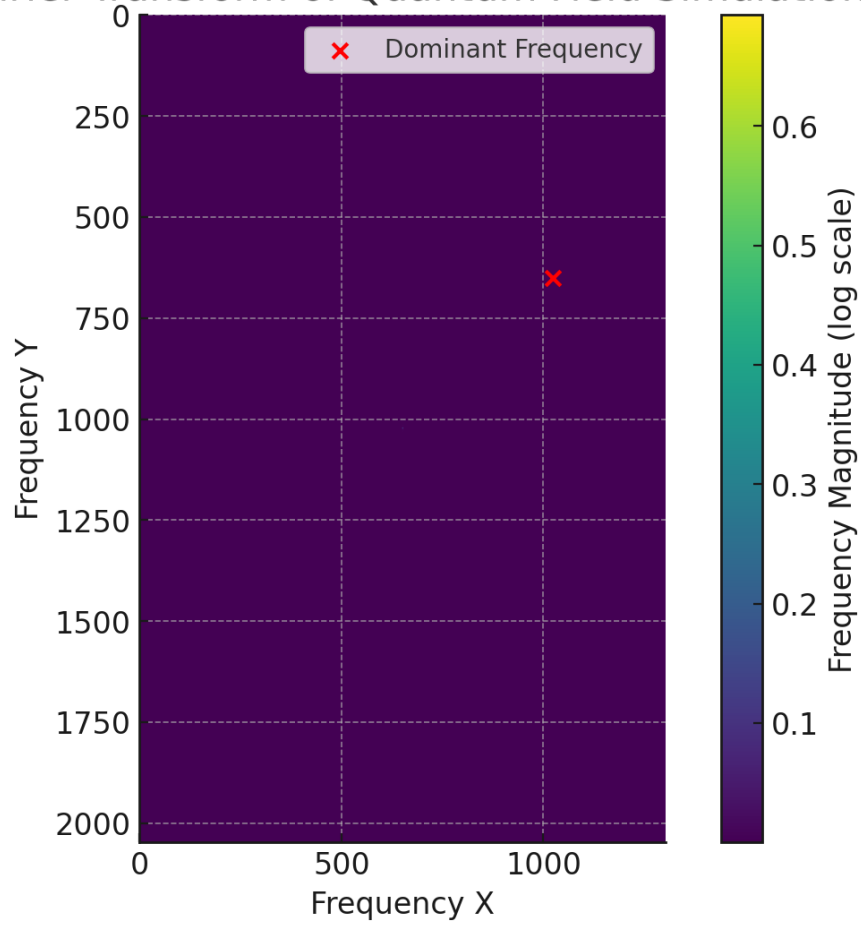

2 Visuals from our work

Here are many simulations, graphs, images that explain the extent of simulation of exploration we had to go through for this exploration. Everything was pushed to the absolute limit.

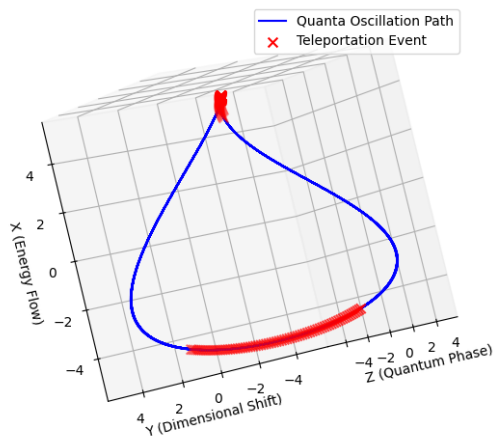

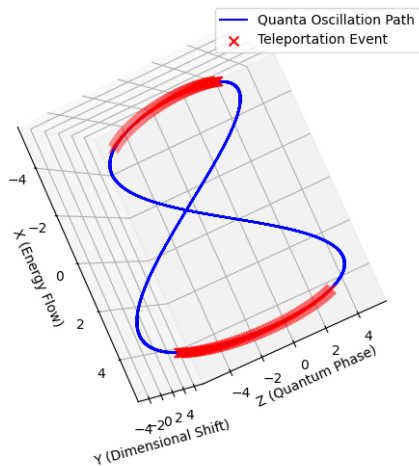

Fourier Transform of Quantum Field Simulation

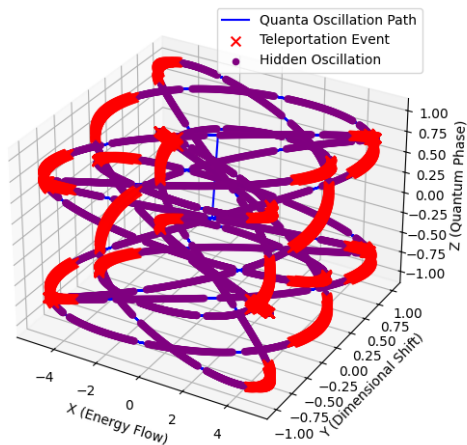

3D Quanta Oscillation & Teleportation Events

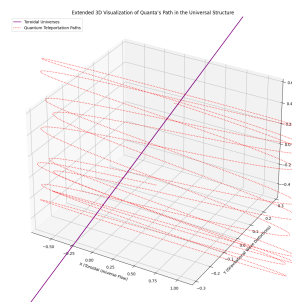

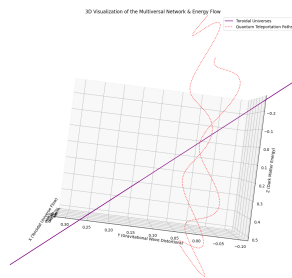

3D Quanta Oscillation & Teleportation Events

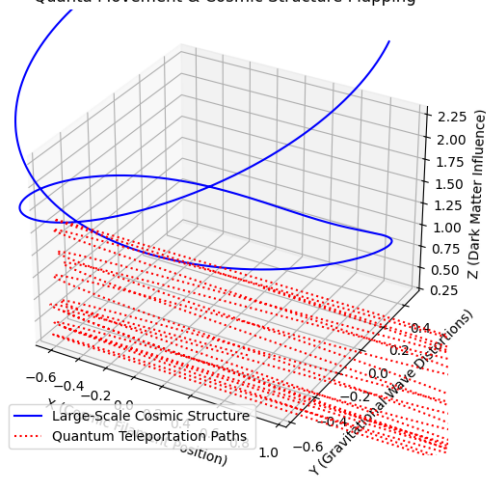

3D Visualization of Hidden Quantum Oscillations & Teleportation

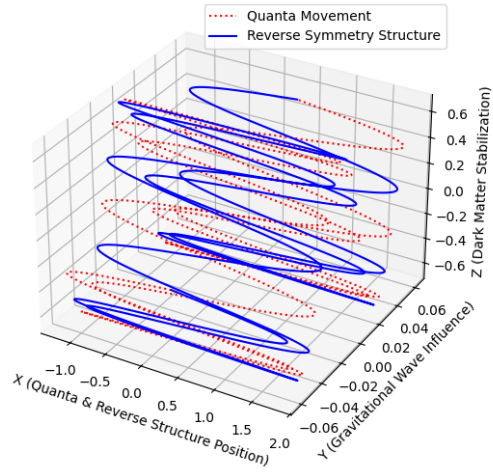

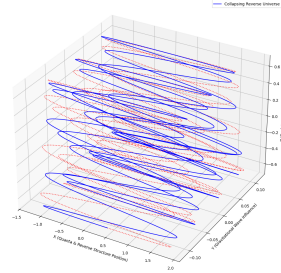

Quanta Movement & Cosmic Structure Mapping

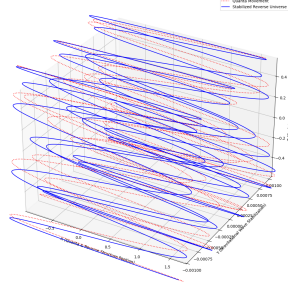

3D Interaction Between Quanta & Reverse Symmetry Structure

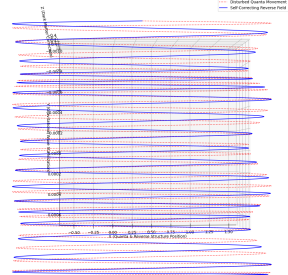

3D Universal Collapse & Expansion Dynamics

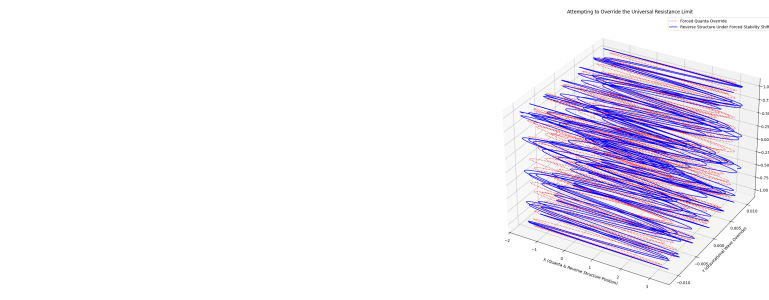

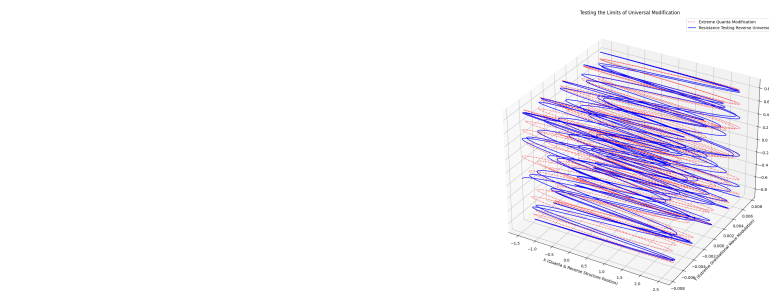

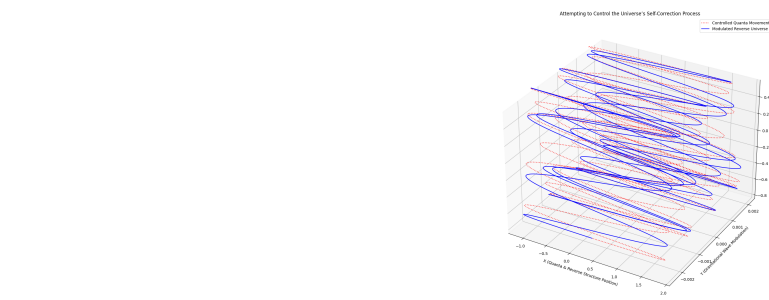

Attempting to Force Quanta & Universal Expansion into Perfect Harmonic Balance

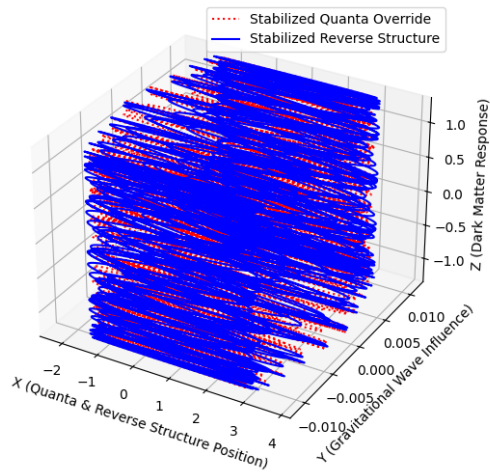

Testing the Universe's Self-Correction Mechanism

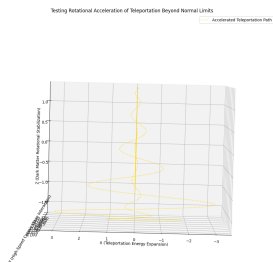

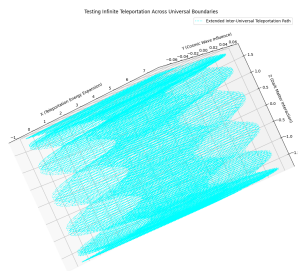

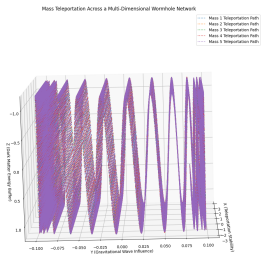

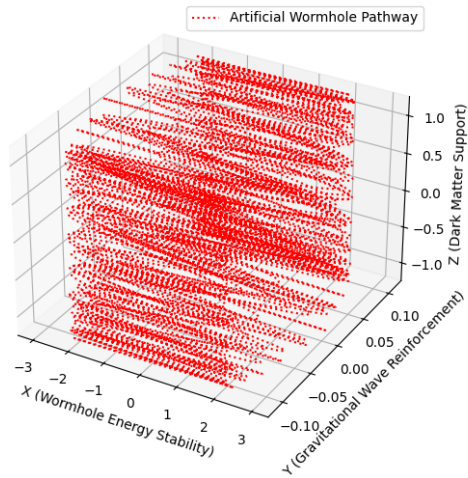

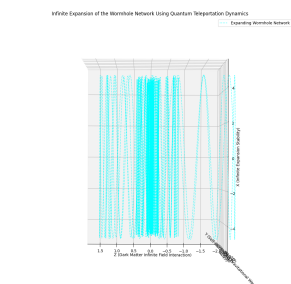

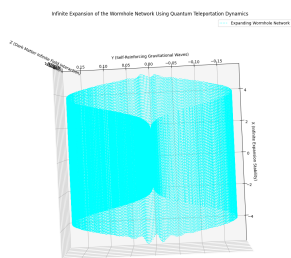

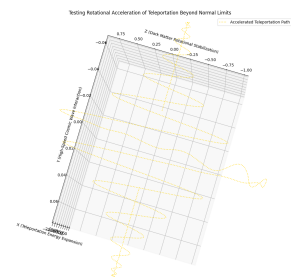

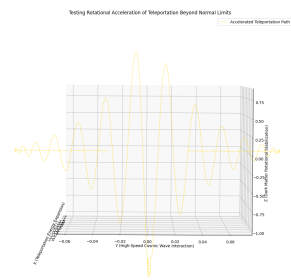

Testing Stabilized Override of Universal Resistance

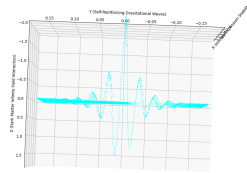

Testing Artificial Wormhole Stability Under Universal Override

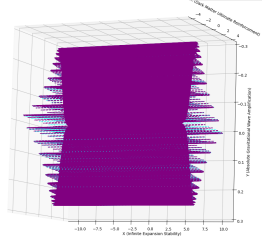

Infinite Expansion of the Wormhole Network Using Quantum Teleportation Dynamics

The Ultimate Wormhole Network Expansion Test: Mirror Structures, True Infinity, Absolute Zero Computations

The Ultimate Wormhole Network Expansion Test: Mirror Structures, True Infinity, Absolute Zero Computations
