

Stakeholder Engagement Strategy: KIPT Project

The KIPT Project has designed its stakeholder engagement approach to ensure legitimacy, transparency, and long-term alignment with ethical, scientific, and policy frameworks. The strategy recognizes that inclusive, international, and interdisciplinary dialogue is essential for the success of a complex initiative like KIPT. Below is a structured outline of the engagement pillars:

1. Stakeholder Identification and Mapping - Primary Stakeholders: UN agencies (UNDP, UNEP, UNFCCC, IAEA), national regulatory bodies, global research institutions, and climate-focused NGOs. - **Secondary Stakeholders:** Affected communities, scientific networks, sustainability and ethics boards, and industrial actors. - **Tertiary Stakeholders:** Education platforms, future research networks, open-data initiatives.

2. Communication & Transparency - Public Reporting: Structured release of key environmental, economic, and safety data, subject to security considerations. - **Open Access:** Scientific results, aggregated system data, and anonymized findings will be shared via international data hubs. - **Languages & Accessibility:** Multilingual interfaces and simplified summaries for non-expert communities.

3. Engagement Channels - Multilateral Consultations: Annual summits and rotating expert panels from IAEA, WMO, IPCC, and national agencies. - **Community Integration:** Regional pilot sites include co-design workshops with affected communities. - **Feedback Mechanisms:** Secure reporting channels, transparent logs of stakeholder input, and versioned design adaptations.

4. Ethical Governance & Review Boards - Independent Review Panels: Bioethics, climate justice, and nuclear safety boards aligned with UN principles. - **Audit Cooperation:** Joint evaluations with international safety agencies (e.g., ENSREG, OECD/NEA).

5. Adaptive Evolution - Modular Strategy Updates: Regularly updated stakeholder matrix reflecting emerging partners, issues, and regulatory shifts. - **Responsive Innovation Cycles:** Annual update and prioritization of feedback loops integrated into development roadmap.

Conclusion This strategy ensures that the KIPT Project remains a transparent, inclusive, and ethically grounded initiative capable of responding to global and local expectations across its lifecycle.
