

## Oracle feedback

At the Technical University of Košice, a virtual assistant called Oracle has been created. It processes data from the evaluation of student solutions to assignments and uses them to provide personalized feedback via email. This feedback includes their achieved result, percentile, the average score of all students for the given assignment, and three graphs illustrating the student's work on the assignment.

The Oracle has been improved to provide new information for students. Now, it can analyze their code, find issues, and provide advice on fixing them. Besides that, it will show them the correct formatting for their code so they can keep practicing clean code using coding conventions.

The virtual assistant is used during students' first year at the university while they take ZAP (Základy algoritmickej a programovanej) and PVJC (Programovanie v jazyku C) courses. You probably took those or similar courses at the university. We would like to ask you for your feedback about the Oracle and about the new improvements. It won't take you more than 5 minutes, but it'll help us a lot. First, [check examples of the emails](#) to see how they look like. Then please fill out this form. Thank you.
