

Lost in Training?

RDMTraining4NFDI

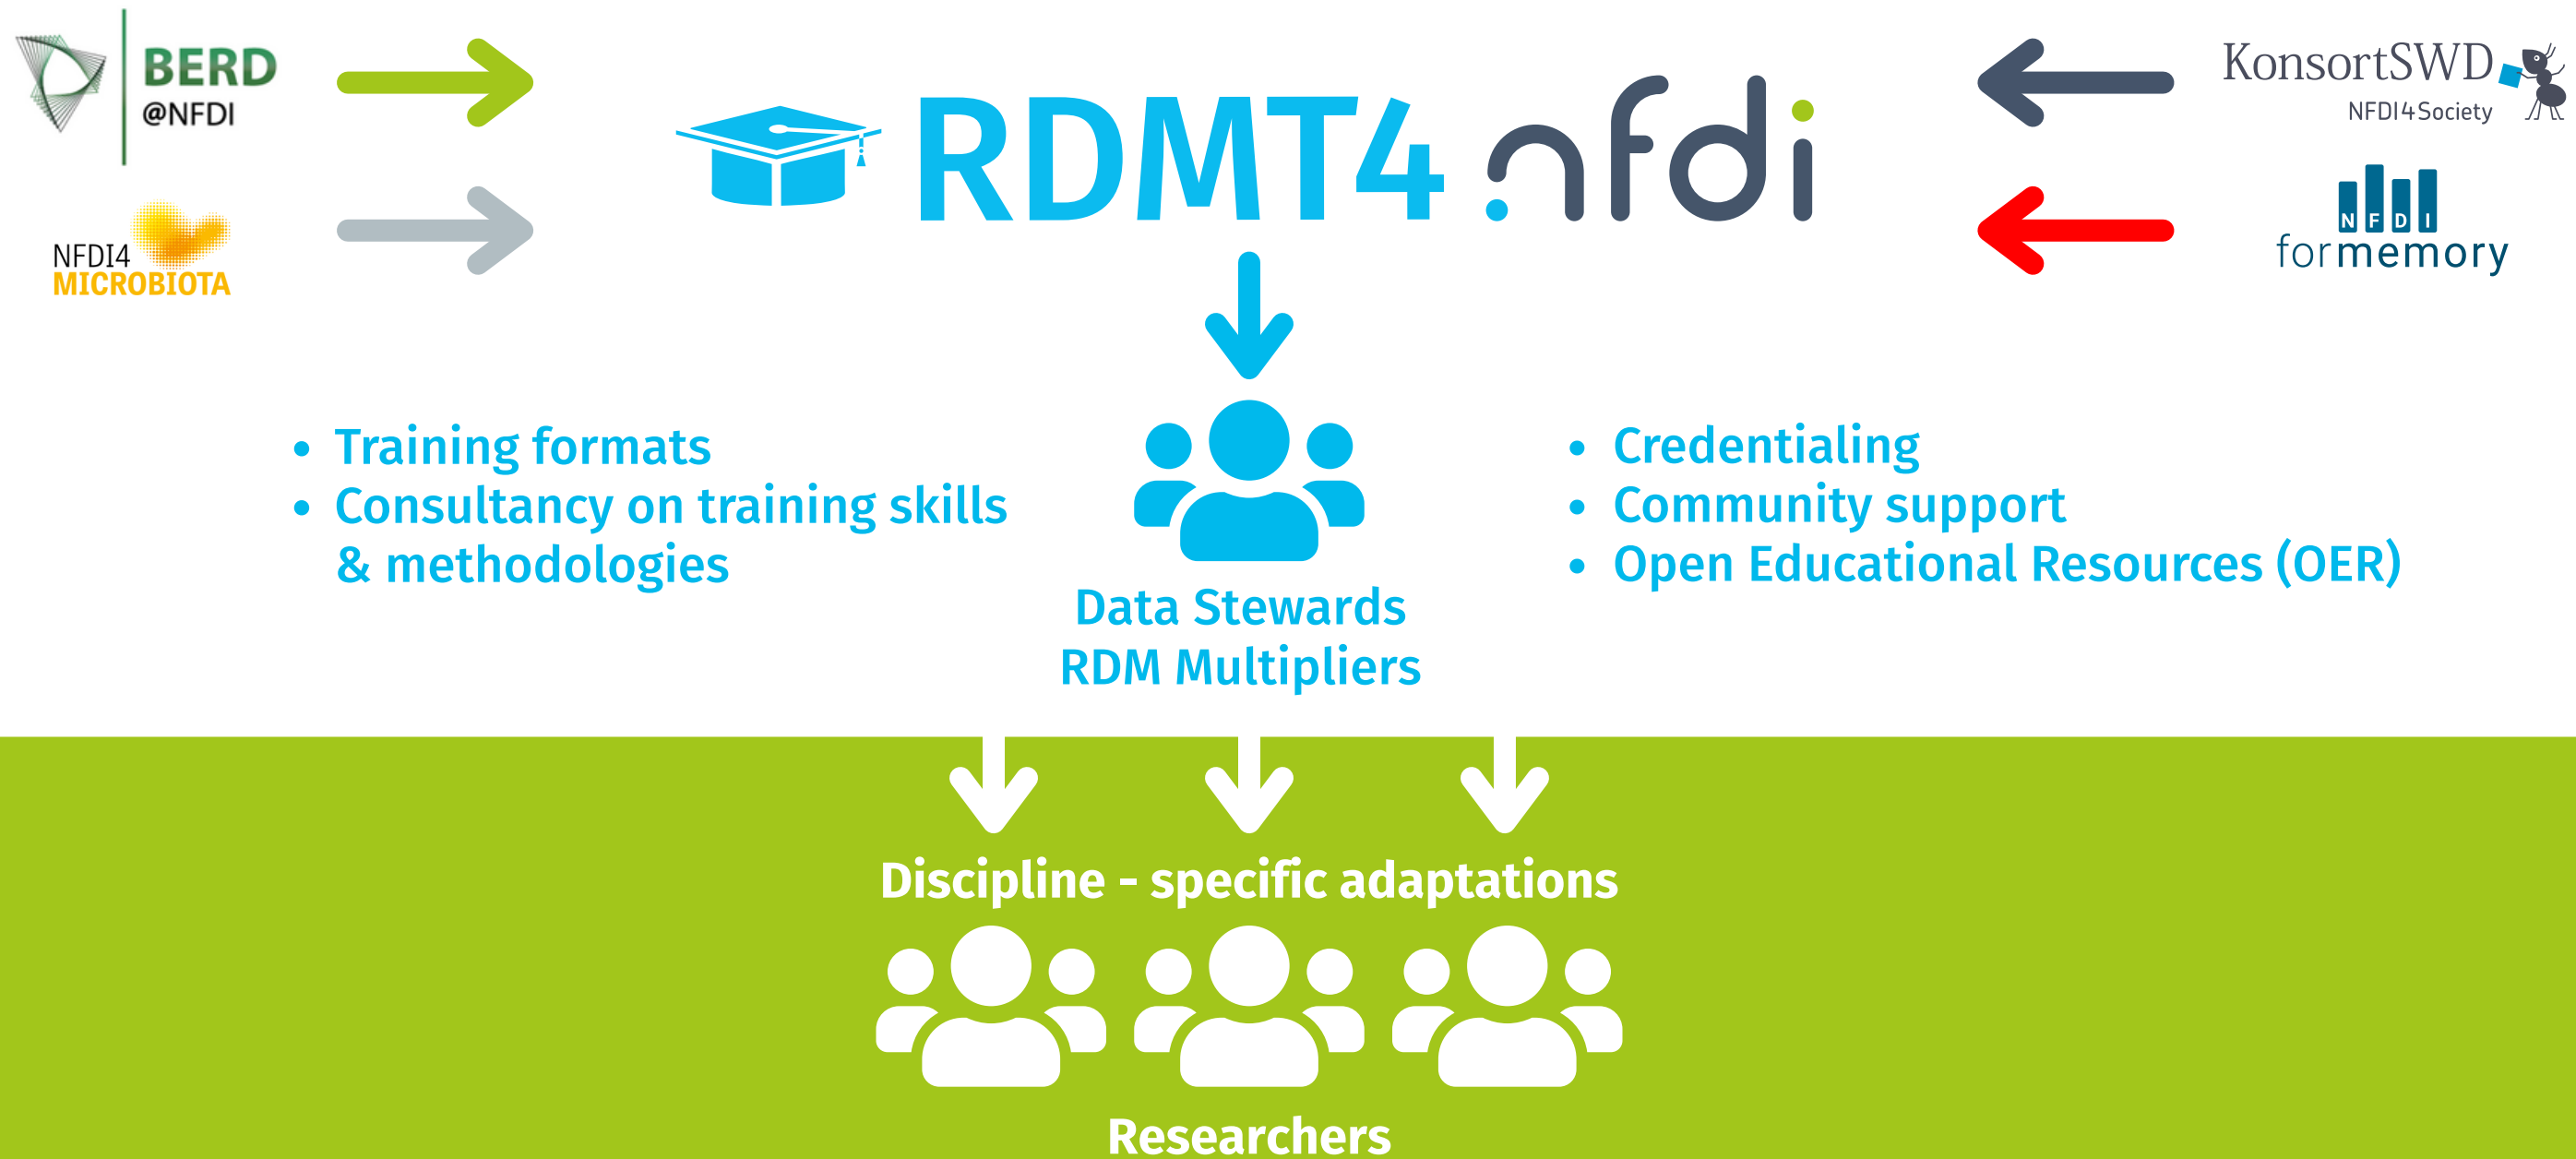

A service aimed at improving research data management (RDM) through tools, training, and community support.

CoRDI, 28th of August 2025
Speaker: Mareike Wohltmann and Sina Bock
DOI: 10.5281/zenodo.17084692

Core Questions

- Which RDM training materials and content are **relevant for whom**?
- How can generic RDM training materials be **adapted to subject-/discipline** specific needs?
- Which training **formats** are suitable for which target group?
- Which training format does most **effectively teach** RDM skills?
- How might a **credentialing framework** look like?
- How can we contribute to **simplify** creating, publishing and administering **RDM training materials**?

Bridging Questions and Practice

● RDM Training Materials

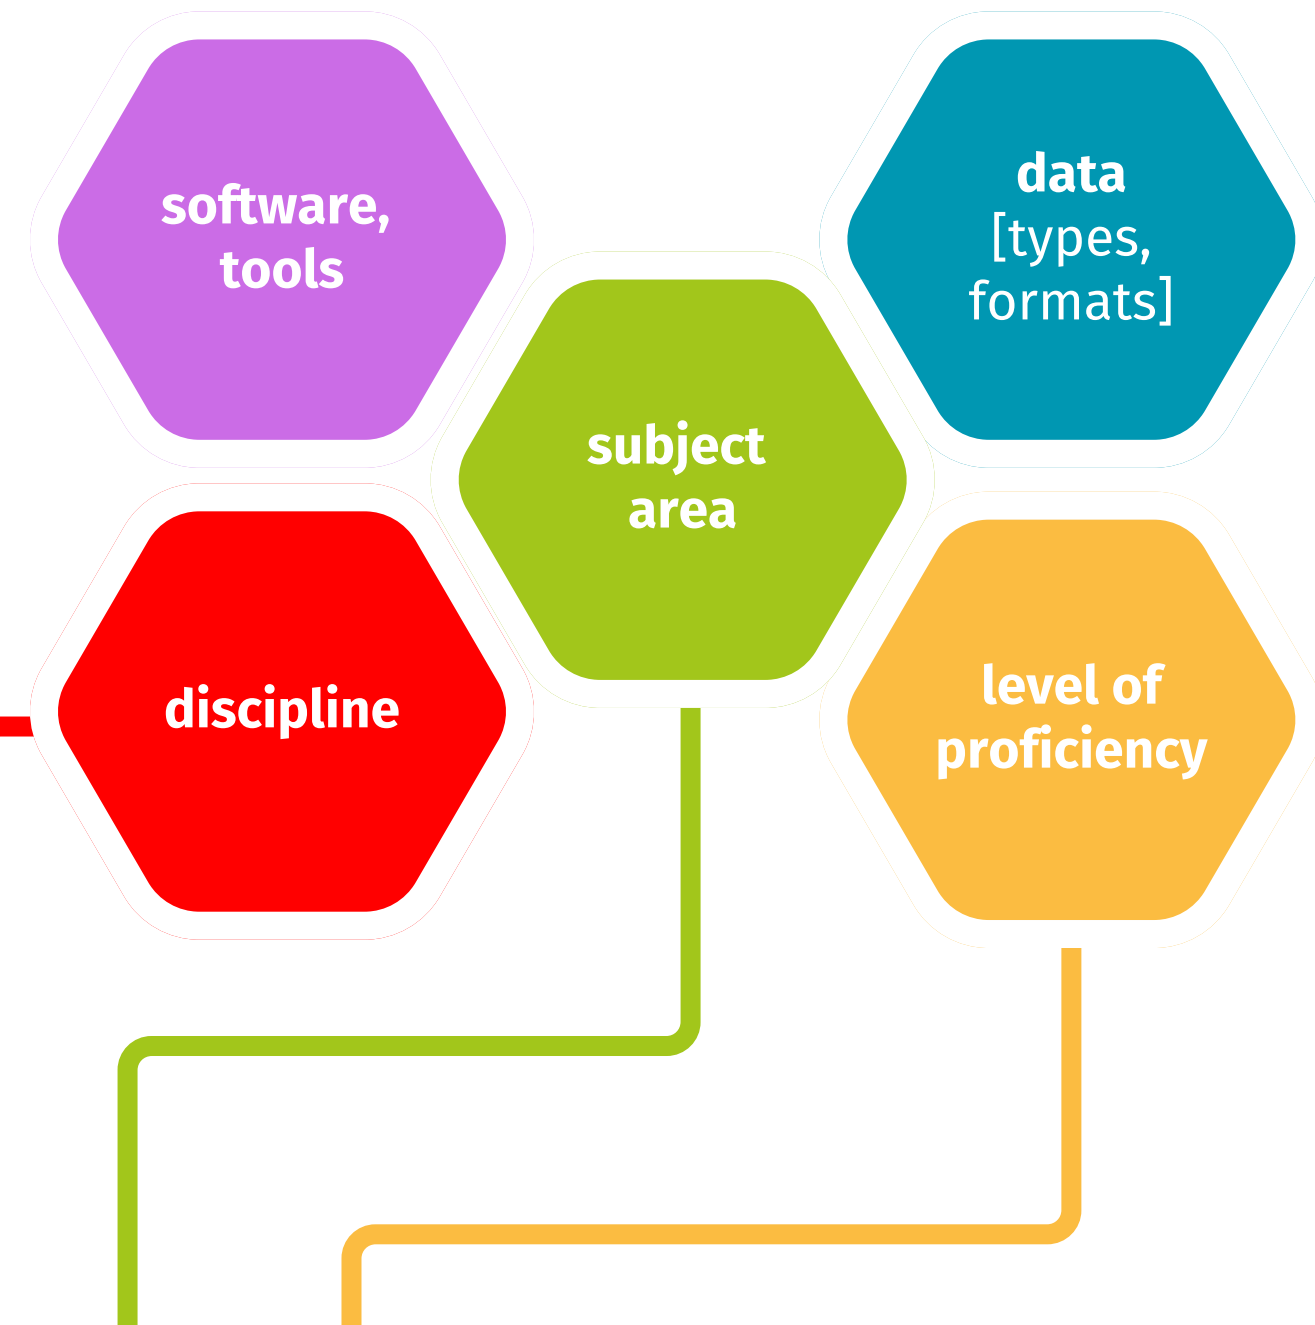

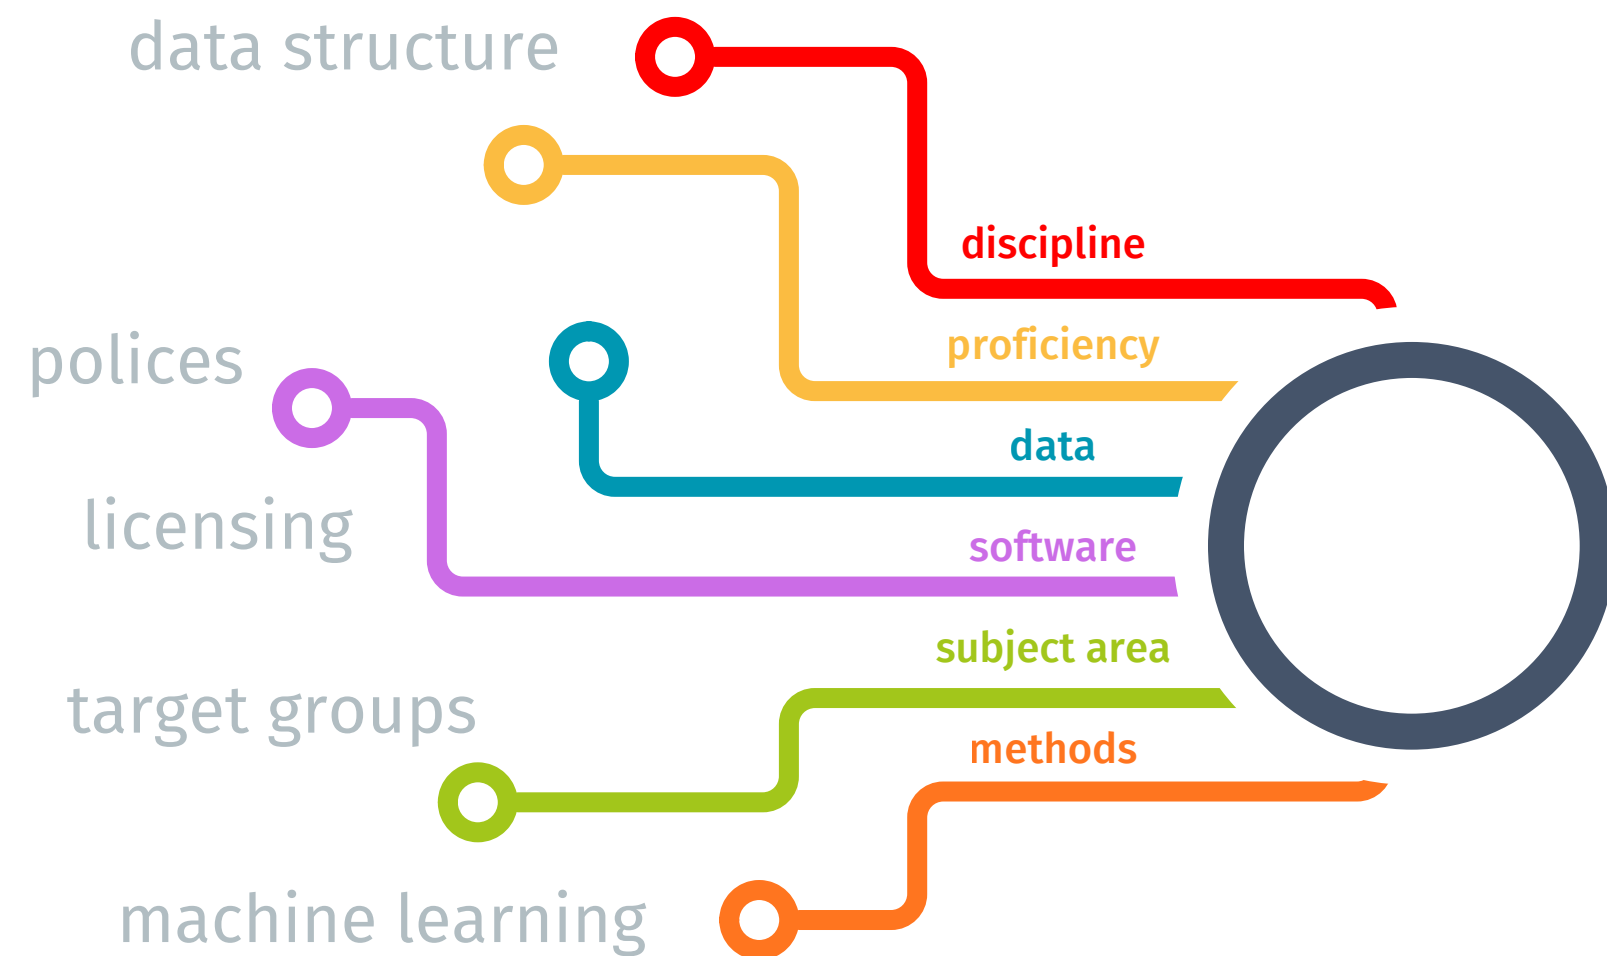

○ Approach:

- Comparing RDM training materials from our use cases
- Different perspectives
 - Concepts: Train-the-Trainer, learning objective matrix, EduBricks
 - Discipline specific views
 - Metadata (schemata): DALIA Interchange Format, DINI/Nestor UAG Forschungsdaten

○ How to **harmonise** terminologies, **adapt** discipline specific subject areas, methods and data types?

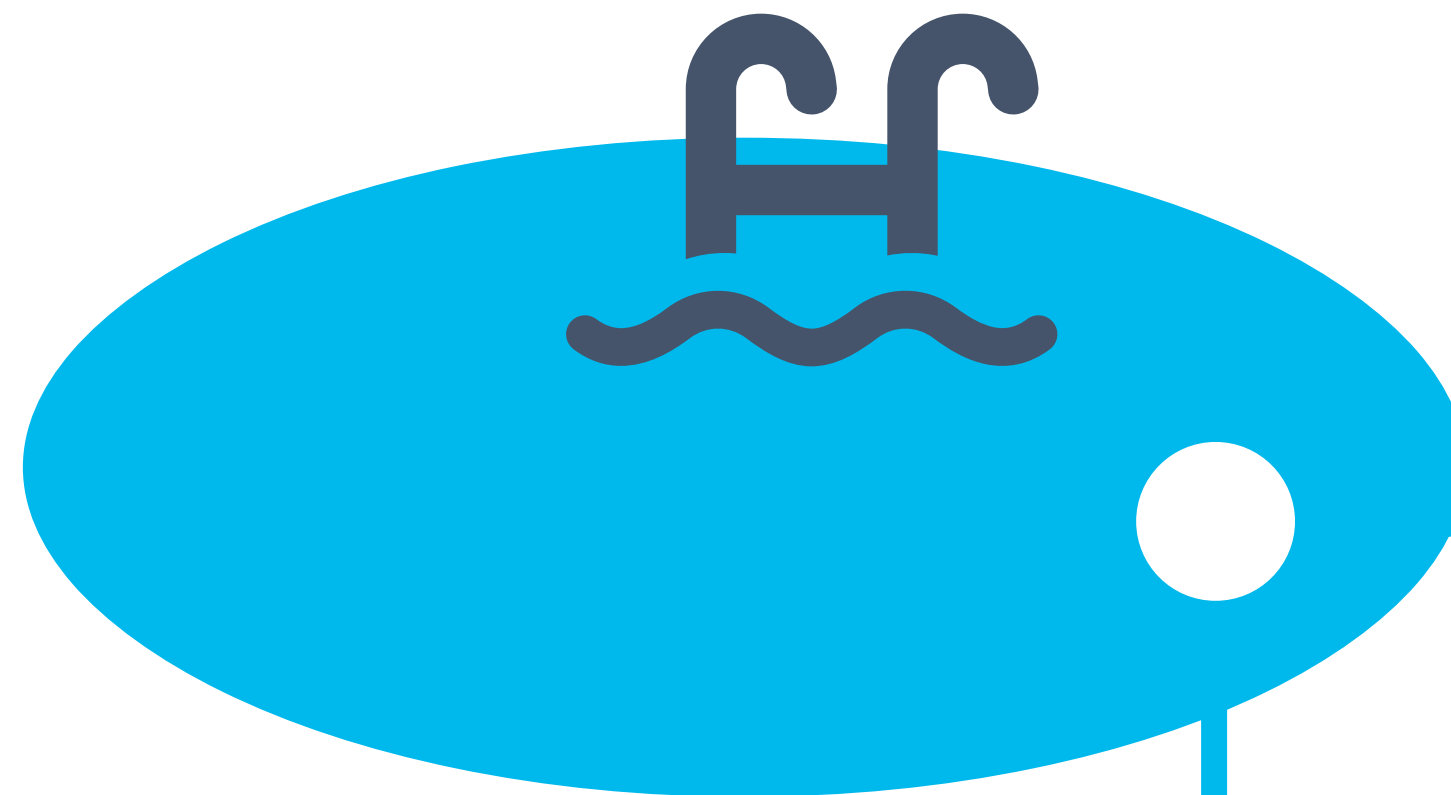

○ How to **operationalise** learning objectives and quality indicators?

A (future) RDM Knowledge Base

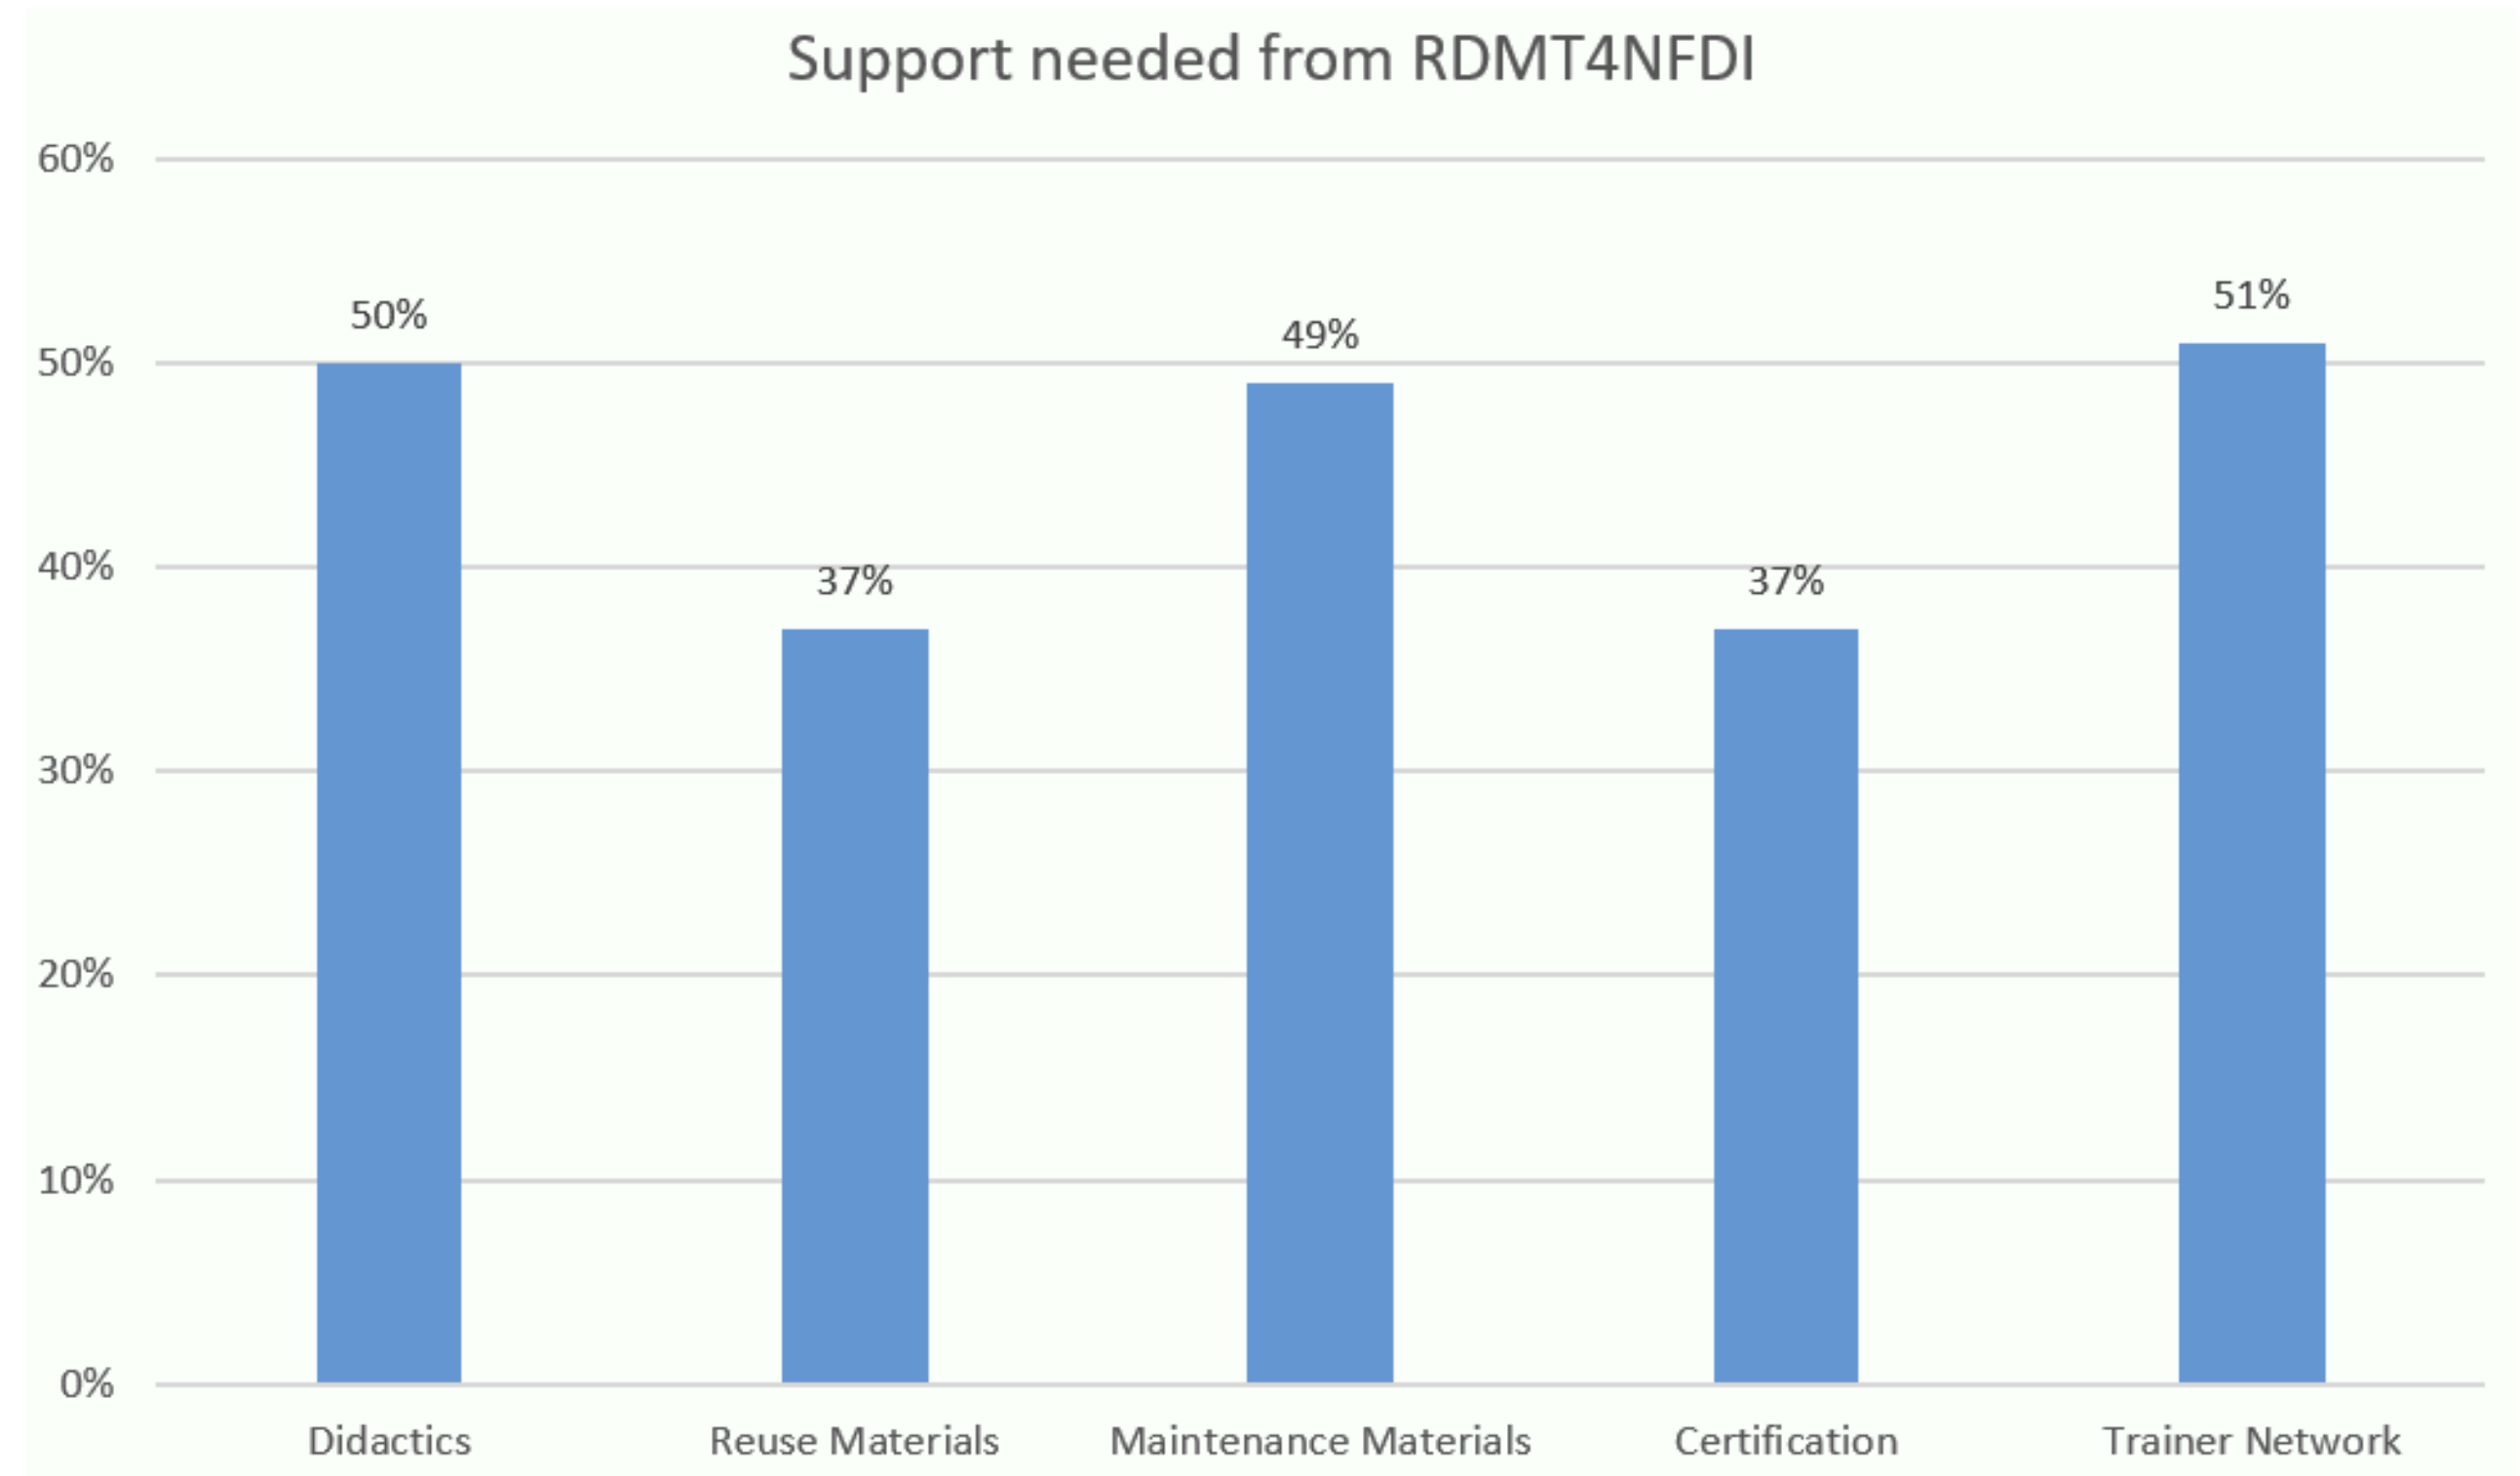

Further Steps

We plan to establish a referral system in order to build a cross-consortium NFDI **pool of materials, resources and methods** for all multipliers of research data management.

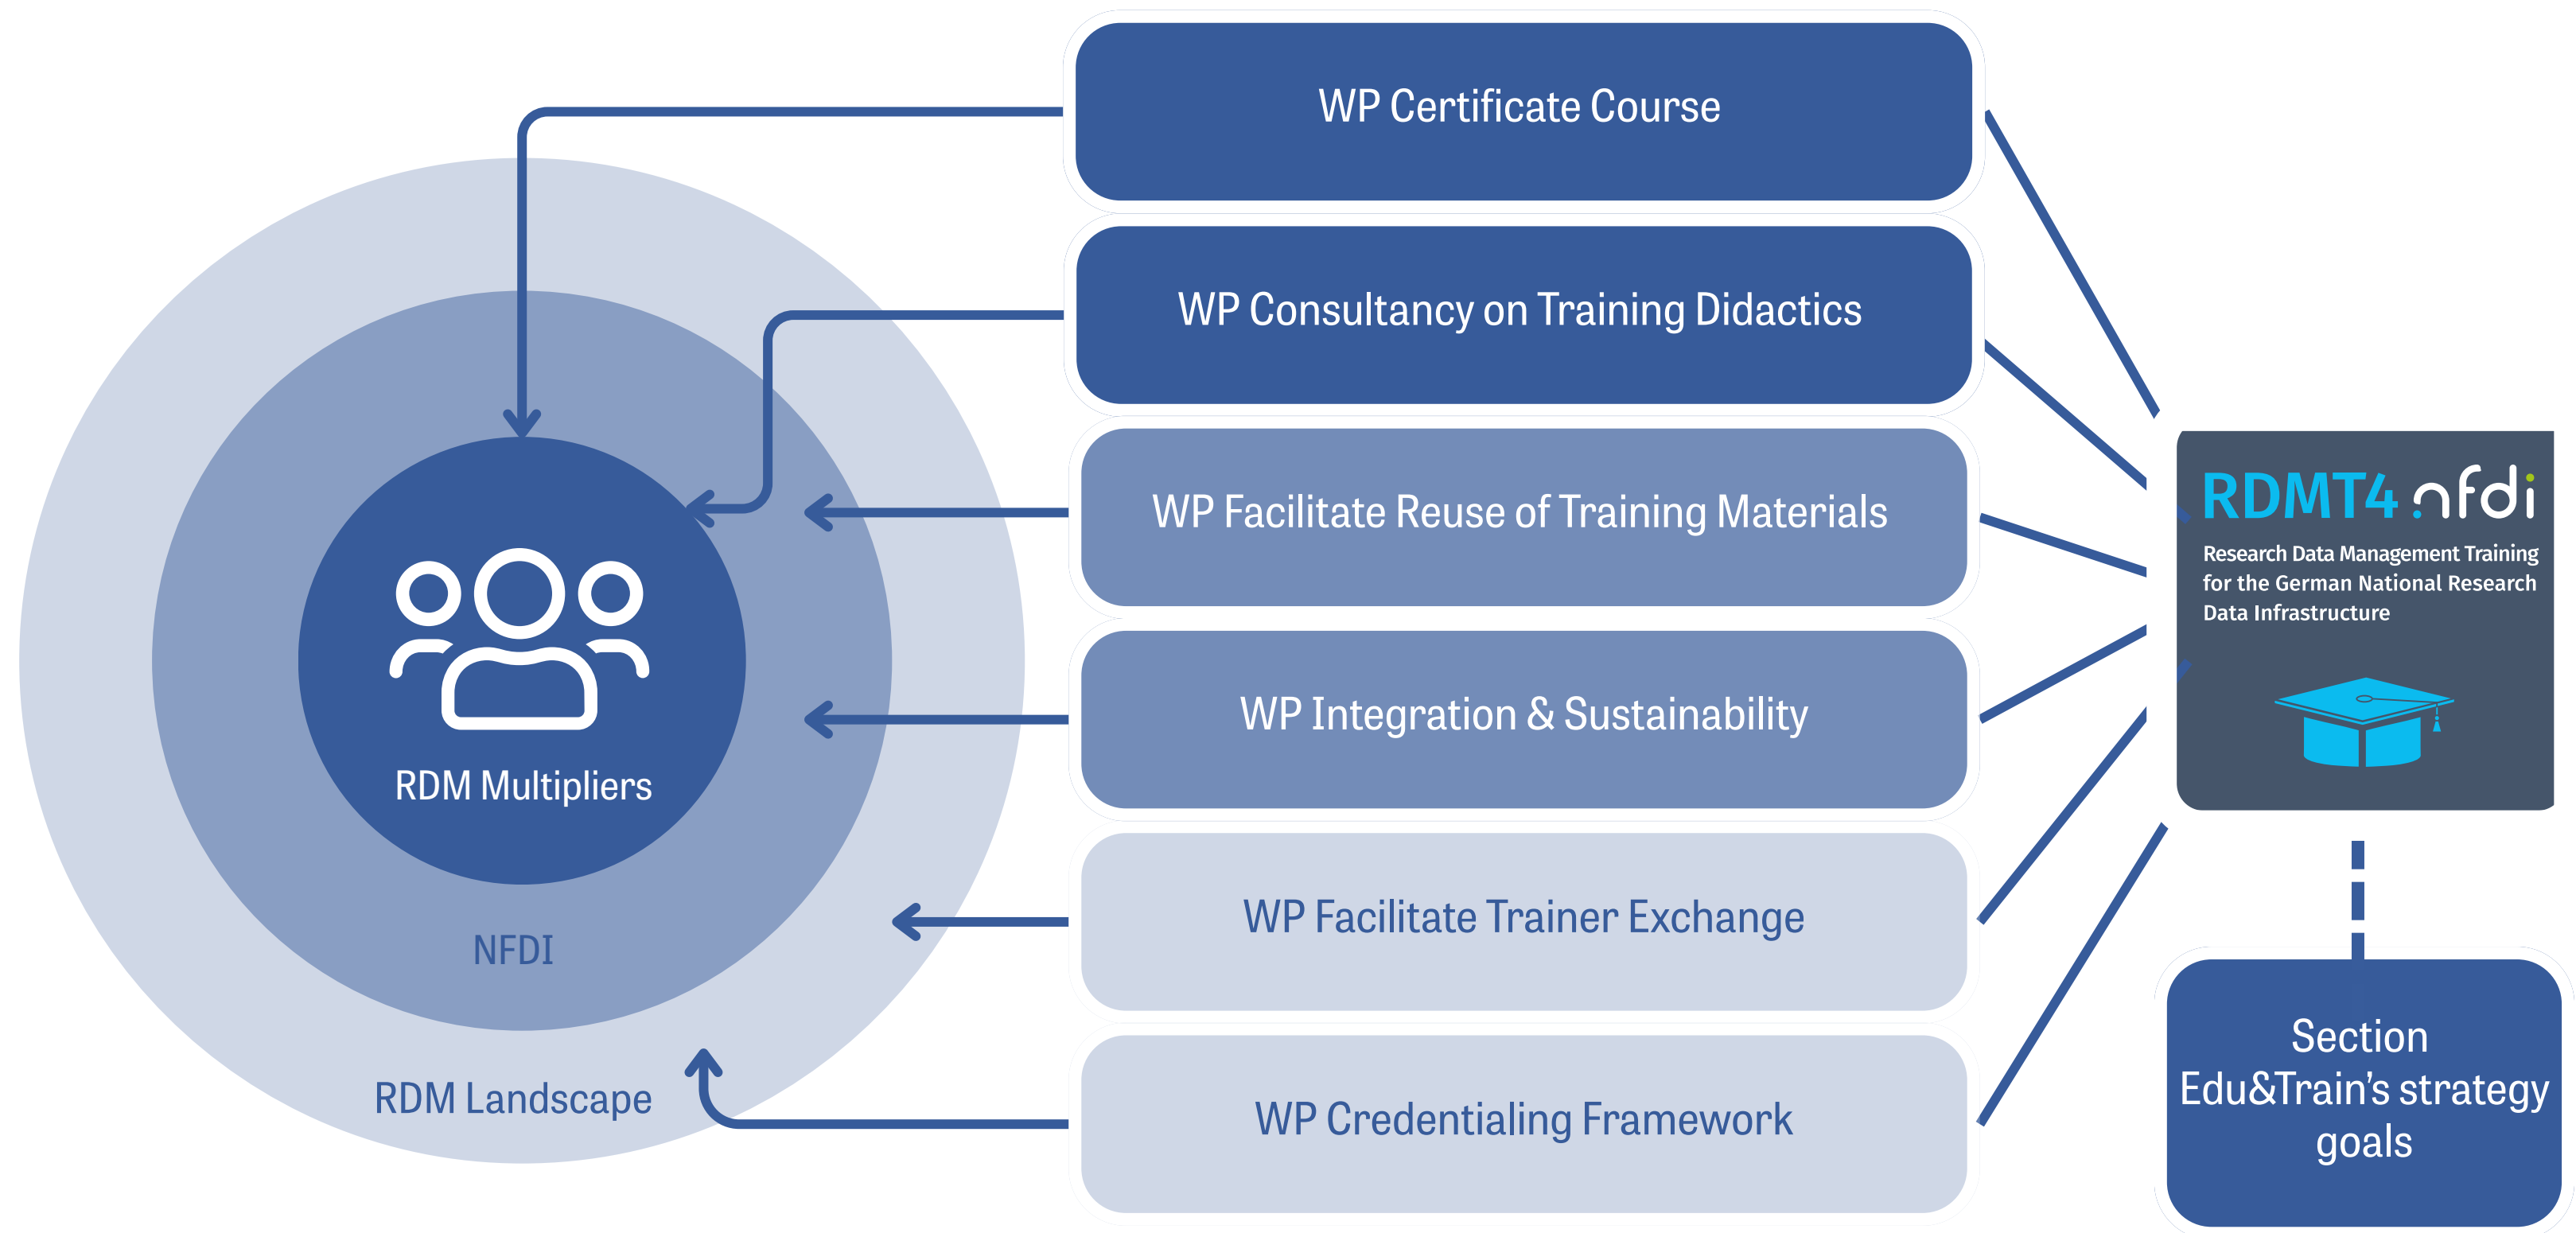

Survey Results

Results from the survey as part of the requirements analysis (June 2025); n = 113. Percentages represent the sum of the answers 'high support,' 'higher support,' or 'maximum support' needed

Outlook Next Phase

Examining Credentialing

- Analysis of different certification types and models
 - e.g. learning badges, microcredentials, certificates, ...
 - Certification process e.g. certificate course NRW
- Awarding of micro-credentials
- Pilot with partner consortia
