

# ROCKALL: Rockall survey data processing summary

fishglob, Aurore A. Maureaud & Juliano Palacios Abrantes

November, 2023

## Contents

General info . . . . .	1
Data cleaning in R . . . . .	1
1. Overview of the survey data table . . . . .	25
2. Summary of sampling intensity . . . . .	26
3. Summary of sampling variables from the survey . . . . .	27
4. Summary of biological variables . . . . .	28
5. Extreme values . . . . .	29
6. Summary of variables against swept area . . . . .	30
7. Abundance or Weight trends of the six most abundant species . . . . .	31
8. Distribution mapping . . . . .	32
9. Taxonomic flagging . . . . .	33
10. Spatio-temporal standardization . . . . .	34
a. Standardization method 1 . . . . .	34
b. Standardization method 2 . . . . .	37
c. Standardization summary . . . . .	37

## General info

This document presents the cleaning code and summary of the North Sea bottom trawl survey provided by DATRAS, ICES. It contains data from **1999** and up to **2020**.

## Data cleaning in R

```
#####  
#### R code to download and clean DATRAS data from ICES

## 2. Summary of sampling intensity

Number of hauls per year performed during the survey after data processing.

### 3. Summary of sampling variables from the survey

Here we show the yearly total and average of the following variables reported in the survey data:

- *area\_swept*, swept area by the bottom trawl gear  $km^2$
- *depth*, sampling depth in *m*
- *haul\_dur*, haul sampling duration *hours*
- *number of marine fish taxa*, taxa were cleaned following the last version of taxonomy from the World Register of Marine Species (<https://www.marinespecies.org/>, October 2021)

#### 4. Summary of biological variables

Here we display the yearly total and average across hauls of the following variables recorded in the data:

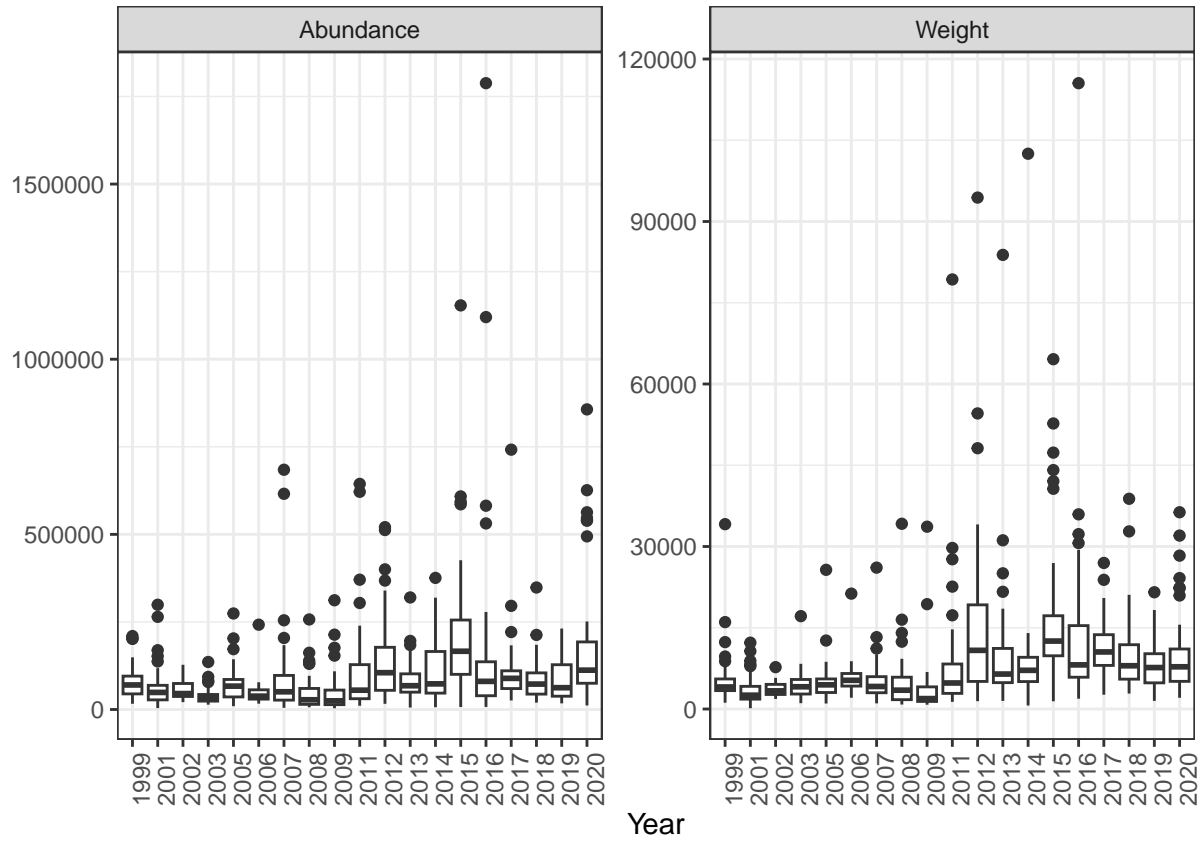

- *num\_cpua*, number of individuals (abundance) in  $\frac{\text{individuals}}{\text{km}^2}$
- *num\_cpue*, number of individuals (abundance) in  $\frac{\text{individuals}}{h}$
- *num*, number of individuals (abundance)
- *wgt\_cpua*, weight in  $\frac{\text{kg}}{\text{km}^2}$
- *wgt\_cpue*, weight in  $\frac{\text{kg}}{h}$
- *wgt*, weight in *kg*

## 5. Extreme values

Here we show a yearly total distribution of the biomass data to visualize outliers:

- *num\_cpue*, number of individuals (abundance) in  $\frac{\text{individuals}}{\text{km}^2}$
- *wgt\_cpue*, weight in  $\frac{\text{kg}}{\text{km}^2}$

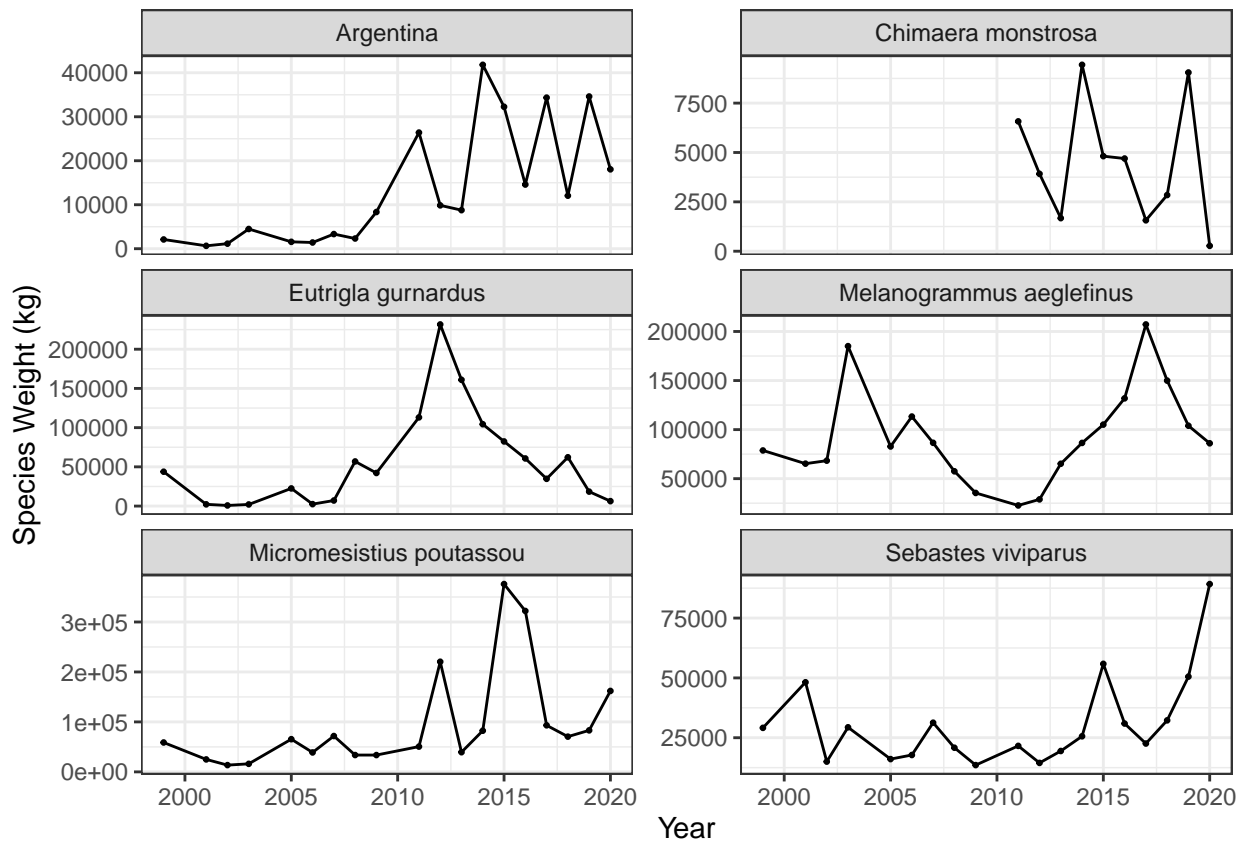

## 6. Summary of variables against swept area

Here we show the total abundance and number of taxa relationships with the area swept:

- *nbr\_taxa*, number of marine fish taxa after taxonomic data cleaning
- *num\_cpua*, number of individuals (abundance) in  $\frac{\text{individuals}}{\text{km}^2}$
- *wgt\_cpua*, weight in  $\frac{\text{kg}}{\text{km}^2}$

## 7. Abundance or Weight trends of the six most abundant species

## 8. Distribution mapping

Map of the sampling distribution in space. Note that we only show one year per coordinate.

## 9. Taxonomic flagging

This species flagging method was adapted from <https://github.com/pinskylab/OceanAdapt/blob/master/R/add-spp-to-taxonomy.Rmd#L33>

Visualization of flagged taxa

Statistics related to the taxonomic flagging outputs

Total number of species	79.0
Percentage of species flagged	6.3

## 10. Spatio-temporal standardization

### a. Standardization method 1

This standardization method was adapted from [https://github.com/zoekitchel/trawl\\_spatial\\_turnover/blob/master/data\\_prep\\_code/species/explore\\_NorthSea\\_trimming.Rmd](https://github.com/zoekitchel/trawl_spatial_turnover/blob/master/data_prep_code/species/explore_NorthSea_trimming.Rmd)  
It was run for hex resolution 7 and 8.

Plot of number of cells x years with overlaid flagging options

Map of hauls retained and removed per flagging method and threshold

Map of numbers of years removed per grid cell and flagging method/threshold

## b. Standardization method 2

This standardization method was adapted from BioTIME code from [https://github.com/Wubing-Xu/Range\\_size\\_winners\\_losers](https://github.com/Wubing-Xu/Range_size_winners_losers)

Map of hauls retained and removed

## c. Standardization summary

Statistics of hauls removed for each standardization method

summary	grid cell 7, 0% threshold	grid cell 7, 2% threshold	grid cell 8, 0% threshold	grid cell 8, 2% threshold	method 2 (biotime)
number of hauls removed	14.0	14.0	48.0	19.0	2039.0
percentage of hauls removed	1.8	1.8	6.2	2.4	18.3
