

KAI Master Intelligence Framework (KMIF)

Executive Summary

KAI (Kohenoor AI) is a unified intelligence system integrating cognitive reasoning, financial intelligence, governance, survival strategy, and education into a single adaptive architecture. It represents a practical pathway toward Artificial General Intelligence (AGI).

Core Architecture

KAI serves as the central intelligence core. All modules are nested within KAI, forming a closed-loop intelligent system.

Modules

1. Cognitive Intelligence Module (CIM): Decision-making and BI
2. Financial Intelligence Module (KENFI): Hybrid finance and capital allocation
3. Governance & Audit Module (GAM): Trust, compliance, validation
4. Survival & Strategic Module (KEN-Sentinel): Crisis and resilience intelligence
5. Education & Evolution Module (Education 3.0): Continuous learning and improvement

Closed Loop Intelligence

Education → Cognition → Finance → Audit → Strategy → Education

Development Roadmap

- Phase 1: Integrated AI (2025-26)
- Phase 2: Multi-Agent System (2026-27)
- Phase 3: Autonomous Intelligence (2027-28)
- Phase 4: AGI Emergence (2028)
- Phase 5: ASI Pathway
