Gender Economics *in* GCC Economies

Policy Transitions toward Women's Economic Empowerment

*An international edited volume on gender, policy and
economic transformation in the Gulf region*

Edited by:

Pedro A. Martin-Cervantes
(University of Valladolid (Spain))

Rozina Shaheen
(Effat University (Saudi Arabia))

UVa

Scope and Thematic Areas

Gender economics has become a central pillar in understanding economic development, social transformation and policy design across the Gulf Cooperation Council (GCC) countries.

This edited volume aims to bring together cutting-edge research addressing the evolving role of women in the economy, focusing on labour markets, education, leadership, digital transformation and institutional change in the region.

The volume welcomes contributions that provide both theoretical and empirical insights, with a strong emphasis on policy relevance and international comparability.

The volume is structured around four thematic areas:

Part I. Foundations and Long-Run Trajectories

Economic, historical and structural perspectives on gender in the Middle East

Part II. Human Capital and Family Structures

Education, labour participation and social dynamics

Part III. Leadership and the Knowledge Economy

Institutions, governance, ICT, AI and digital transformation

Part IV. Financial Inclusion and Policy Design

Comparative perspectives, microfinance and SDG-oriented policies

This volume will be published as part of the Springer Nature book series:

Perspectives on Development in the Middle East and North Africa
