Abstract

The concept of the Akashic Records—a cosmic database storing all thoughts, emotions, and actions of every being—has long been preserved in Indian philosophy, Tibetan traditions, and New Age movements. Yet it has remained excluded from scientific discourse due to the lack of observable, repeatable empirical foundations. By establishing a conceptual correspondence with the Instantaneous Teleportation Cosmos (ITC) theoretical framework, this paper explores a possible structural mapping for these traditional claims. ITC theory takes zero-latency transmission between any two points in the universe as its first principle and constructs the basal structure with six core properties (P1 Storage Perfection, P2 Instantaneous Connectivity, P3 Mapping Determinacy, P4 Manifestation Finiteness, P5 Basal Resonance Tunability, P6 Consciousness Coupling). Within this framework, the Akashic Records can be interpreted as corresponding to the universal repository of the basal information layer—its eternal preservation is paralleled by P1, its instantaneous accessibility by P2, its independence from ordinary space and time by P3, its inaccessibility to ordinary individuals by P4, a possible technological pathway by P5, and a theoretical route to direct access through specific states of consciousness by P6. This mapping suggests that the core features attributed to the Akashic Records can be understood as structural consequences of the basal framework, rather than requiring a supernatural explanation.

Keywords: Basal structure; Emergent spacetime; Akashic records; Book of life; Consciousness coupling; Instantaneous Teleportation Cosmos

1. Introduction: From Spiritual Tradition to Scientific Inquiry

In Indian philosophy, Akasha signifies sky, space, or ether—the fundamental element of all existence. The Akashic Records are described as a cosmic memory bank storing every soul's thoughts, emotions, and deeds, encompassing past, present, and future. This notion has been widely disseminated in Western New Age movements and is regarded as a cosmic library accessible through deep meditation and heightened states of awareness.

However, modern science has generally rejected the Akashic Records for three main reasons: first, the lack of observable, repeatable experimental evidence; second, the concept originates from mystical traditions and lacks dialogue with mainstream physical theories; third, its omniscient attribute conflicts with the falsifiability principle of scientific methodology.

In recent years, with the development of quantum information theory and holographic universe principles, a dialogue between the Akashic Records and scientific theories has become possible. Some scholars have noted that the holographic principle—the three-dimensional world is a projection of information on a two-dimensional boundary—closely resembles the Akashic insight that the phenomenal world originates from an invisible information repository. Quantum information theory's stance that “information is the most fundamental building block of reality” also echoes the concept of the Akashic Records as a cosmic database.

This paper explores a structural correspondence between the Akashic Records and the ITC framework ^[1-3]. ITC theory, based on the first principle of zero-latency transmission, constructs a two-layer basal-manifestation model of the universe. It suggests that the Akashic Records, as traditionally described, may be interpreted as a conceptual parallel to the basal information layer within ITC theory, and that certain core features attributed to them could be systematically mapped onto the core properties (P1–P6) of the framework.

2. Overview of the ITC Theoretical Framework

2.1 First Principle and the Basal Structure

ITC theory ^[1] takes zero-latency transmission of matter, information, and energy between any two points in the universe as its first principle. This principle directly yields two core corollaries:

- **Absolute Time:** The universe possesses a unified now, allowing a global time coordinate;

- **Basal Structure:** Spatial distance disappears at the fundamental level, necessitating a non-spatial, absolutely existing basal structure in which all nodes are directly connected without distance or delay.

The basal structure is the most fundamental physical reality of the universe, carrying all information. Its relationship with the manifestation layer (the four-dimensional spacetime we perceive) can be analogized to an information repository and a projection screen.

2.2 Six Core Properties

ITC theory derives six core properties of the basal structure from its first principle and quantum phenomena ^[1]:

- **P1 Storage Perfection:** Information in the basal structure never decays or distorts; storage fidelity is 100%. Every macro-event and micro-conscious activity, once occurred, is eternally and completely recorded at the basal level.
- **P2 Instantaneous Connectivity:** Basal nodes are connected without distance or delay; any node's information can be accessed instantaneously. The basal structure is globally connected, allowing any information to be accessed instantaneously regardless of spatial distance.
- **P3 Mapping Determinacy:** The projection mapping from the basal state to the probability distribution in the manifestation layer is deterministic. The same basal state can simultaneously manifest as different worlds according to different projection rules, forming the “One Basal, Many Manifestations” cosmological picture.
- **P4 Manifestation Finiteness:** Manifestation of information in the manifestation layer requires a local time τ , and single outcomes are random. Ordinary individuals are locked into current manifestation rules, receiving information only through sensory channels and unable to directly perceive the basal layer.
- **P5 Basal Resonance Tunability:** External physical fields (especially electromagnetic fields) at specific frequencies can resonate with the basal structure, modulating P4 parameters (node projection density ρ and manifestation time τ), thereby altering manifestation appearances. This provides an engineering pathway for spacetime editing.
- **P6 Consciousness Coupling:** Specific states of consciousness (such as no-thought or subject-object extinction in deep meditation) can directly couple with the basal structure, temporarily suspending P4 constraints on the observer's own information cluster. This enables direct reading—bypassing sensory channels to directly access basal information.

These six properties mutually support each other, forming the complete ITC framework. P1 guarantees the eternality of information; P2 ensures its instantaneous accessibility; P3 defines the projection rules; P4 accounts for the limitations of ordinary perception; P5 provides an external modulation pathway; and P6 represents the inner coupling capacity of consciousness.

3. Conceptual Mapping Between the Akashic Records and ITC Theory

3.1 Cosmic Information Repository and P1 Storage Perfection

The Akashic Records are described as storing all thoughts, emotions, and actions eternally. Their core characteristic is that information never perishes and encompasses all existence. In ITC theory, P1 offers a conceptual parallel to the idea of eternal preservation: information in the basal structure never decays or distorts, with 100% storage fidelity. This means that every event, macro or micro, once it has occurred in the universe, possesses an eternal, complete record at the basal level. P1 offers a conceptual parallel to the description of the Akashic Records as a cosmic information database—information does not vanish but is transferred to the basal layer for permanent preservation.

3.2 Non-spatial Existence and P2 Instantaneous Connectivity

The Akashic Records are described as existing on a non-physical plane, imperceptible and inaccessible. Their inaccessibility stems from their mode of existence transcending ordinary spacetime. In ITC theory, the basal structure itself is non-spatial, and its nodes are guaranteed by P2: basal nodes are connected without distance or delay, allowing instantaneous access to any node's information. This means the Akashic Records are not far away somewhere in the universe but exist at the basal layer, instantaneously connected to all spatial points. Their inaccessibility is not due to distance but because their dimension transcends the manifestation layer—ordinary individuals cannot directly perceive the basal layer, just as a two-dimensional being cannot perceive a three-dimensional object.

3.3 “Past, Present, Future as One” and P3 Mapping Determinacy

The Akashic Records are described as non-linear time, with past, present, and future integrated as one. In ITC theory, P3 stipulates that the mapping from basal state to manifestation-layer probability distribution is deterministic. However, **the same basal state can simultaneously manifest as different worlds according to different projection rules**—the “One Basal, Many Manifestations” principle. In the manifestation layer, time appears as a linear sequence, but at the basal level, the quantum states of all moments coexist and are eternally preserved. What appears as the past in the manifestation layer corresponds to the determinate information of moments

that have already occurred, while the future corresponds to the probabilistic information inherent in the quantum state of the present moment—the two coexist in different forms at the basal level. This aligns closely with the description of time integration found in the Akashic Records.

3.4 “Inaccessible to Ordinary People” and P4 Manifestation Finiteness

Akashic tradition emphasizes that its information cannot be casually accessed by ordinary individuals; it requires deep meditation or special states of consciousness. P4 explains this limitation: manifestation of information in the manifestation layer requires a local time τ , and single outcomes are random. Ordinary individuals are locked into current manifestation rules, receiving information only through sensory channels. Under normal conditions (when P4 constraints are in effect), basal information must undergo P3 mapping and P4 manifestation to enter consciousness—a process in which the information is translated into sensory data, while the original information at the basal level cannot be directly presented. This is precisely the physical origin of the inaccessibility of the Akashic Records. However, in the special state where P6 is activated, consciousness can bypass this pathway and achieve direct reading.

3.5 “Access Through States of Consciousness” and P6 Consciousness Coupling

The most central claim of Akashic tradition is that through meditation, contemplation, and other states of consciousness, individuals can touch this cosmic information repository. The sixth core property of the ITC framework, P6 (Consciousness Coupling), provides a direct coupling mechanism through which specific states of consciousness can directly couple with the basal structure, temporarily suspending P4 constraints on the observer’s own information cluster and enabling direct reading of basal information. When an observer enters deep meditative states such as no-thought or subject-object extinction, their attachment to manifestation-layer rules (e.g., I am the body, space has obstacles) is temporarily suspended. At this moment, P6 is activated, allowing consciousness to bypass sensory channels and directly access basal information. This provides a conceptual analogy to what Akashic tradition describes as touching the cosmic information repository.

3.6 “External Energy Assistance” and P5 Basal Resonance Tunability

Some spiritual traditions also mention using specific energy fields or rituals to assist in accessing the Akashic Records. P5 provides a technological pathway for this: external physical fields at specific frequencies can modulate P4 parameters, assisting consciousness in entering a state coupled with the basal structure, or enhancing the effects of P6.

4. Unified Framework: From “One Basal, Many Manifestations” to the Akashic Records

The “One Basal, Many Manifestations” principle of ITC theory states that the same basal structure can simultaneously project multiple different manifestation worlds; they coexist on the same basal layer but are mutually invisible due to different projection rules. Within this framework, the Akashic Records receive a unified interpretation:

- **Basal layer:** P1 Storage Perfection—the cosmic information repository, information preserved eternally;
- **Connectivity layer:** P2 Instantaneous Connectivity—all information interconnected, globally accessible;
- **Projection layer:** P3 Mapping Determinacy—past, present, future as one, multi-dimensional existence;
- **Constraint layer:** P4 Manifestation Finiteness—inaccessible to ordinary individuals;
- **External modulation:** P5 Basal Resonance Tunability—external energy assistance;
- **Conscious access:** P6 Consciousness Coupling—direct access through meditation/contemplation.

5. Theoretical Significance and Philosophical Implications

5.1 A Conceptual Mapping for the Akashic Records

The Akashic Records have long been excluded from scientific discourse due to a lack of dialogue with mainstream physical theories. Through the systematic correspondence of P1–P6, the ITC framework offers a self-consistent conceptual mapping that parallels certain features of the Akashic Records as traditionally described. Within this framework, the Akashic Records can be interpreted as a logical correspondence to the basal structure, rather than requiring a supernatural explanation.

5.2 Bridging Science and Spirituality

The parallels between quantum information theory, holographic principles, and the Akashic Records have been noted by several scholars. The ITC framework goes further by translating the core spiritual claim—states of consciousness can access the cosmic information repository—into the physical mechanism of P6 Consciousness Coupling. This offers a unified conceptual framework for dialogue between science and spirituality.

5.3 A Modern Scientific Expression of Mind-Matter Unity

The philosophical concept of mind-matter unity acquires concrete physical meaning in the ITC framework: mind (consciousness capable of P6 coupling) and matter (the manifestation-layer projection of the basal structure) are unified in the basal structure itself. The Akashic Records, as the basal information repository, are both the source of matter and an object accessible to mind—a profound expression of mind-matter unity.

6. Conclusion

This paper has explored a structural correspondence between the Akashic Records and the basal information layer within the ITC framework. The analysis suggests that:

- The Akashic Records correspond, within the ITC framework, to the universal repository of the basal information layer;
- P1 guarantees the eternal preservation of information;
- P2 guarantees global accessibility of information;
- P3 explains the projection rules of information;
- P4 explains why ordinary individuals cannot directly access it;
- P5 suggests a possible external modulation pathway;
- P6 points to a theoretical possibility of direct access through states of consciousness.

Within the ITC framework, the Akashic Records can be understood as a logical correspondence to the basal structure, rather than a supernatural mystery. This unified framework offers a new perspective for understanding the relationship between consciousness, information, and ultimate reality of the cosmos, and may open a conceptual space for dialogue between scientific and spiritual perspectives.
