# R REPLICATION RESEARCH

Now open for submissions!

## Re-Doing Research

We publish Replications, Reproductions, Re-Creations, Re-Appraisals, Multiverse-Analyses, and conceptual articles on repeatability research (tutorials, comments, perspectives) from almost all disciplines.

## Quality and Transparency

All empirical submissions undergo in-house **reproducibility checks**, peer review is **open and signed** by default, and reviewers and editors can trigger a **social responsibility review**. Quality Assurance reports get published on Zenodo.

## Community-built and -owned

We built our journal together with a community of **over 50 people**. Anybody can join our discussions and contribute to our vision of free, transparent, and high-quality **scholarly-led publishing**.

## Diamond Open Access

R2 is free to read, free to publish, and free from commercial interests. It is owned by the **MüCOS** and **FORRT**, supported by the **University of Münster** and hosted by the **HBZ Cologne**.
