On January 21, the National Health and Health Commission confirmed the first confirmed case of pneumonia imported from Zhejiang Province with a novel coronavirus infection.

The patient was a 46-year-old male who lived in Wuhan for a long time. I drove from Wuhan to Wenzhou on January 3, and went to the hospital on January 4 for fever symptoms. Isolation treatment was performed at the designated hospital in Wenzhou on January 17.

Tested by the Provincial Center for Disease Control and Prevention, the patient specimens were positive for the new coronavirus nucleic acid. On January 20, the specimens were sent to the Chinese Center for Disease Control and Prevention for viral nucleic acid review and the test was positive. On January 21, a diagnosis of pneumonia confirmed by a new coronavirus infection was confirmed by an expert from the diagnostic team under the Epidemic Leading Group of the National Health and Health Commission. The patient is now in a stable condition and his close contacts are in medical observation.

According to the "Diagnosis and Treatment Scheme for Pneumonia of New Coronavirus Infection" (trial version 2), it has been confirmed by provincial and municipal CDC laboratory tests. As of 12:00 on January 21, except the first confirmed case, the provincial The diagnostic expert group confirmed 4 cases of pneumonia of new coronavirus infection, and reported 5 cases of pneumonia of new coronavirus infection, including 1 in Hangzhou, 2 in Wenzhou, 1 in Zhoushan, and 1 in Taizhou. All cases had a history of residence, travel and close contact in Wuhan. At present, 5 patients are in stable condition. Medical observation was performed on 88 close contacts. No respiratory-related symptoms such as fever were found.

Since the National Health and Health Commission announced the unexplained pneumonia epidemic in Wuhan, our province has attached great importance to the prevention and control of pneumonia caused by new coronavirus infections. In accordance with the requirements of the provincial party committee and government, all relevant departments have

cooperated in a coordinated manner, and each work is scientific, orderly and effective Carry out. Medical institutions at all levels throughout the province have strengthened the allocation of power for pre-screening, triage, and fever, and standardized the monitoring, screening, diagnosis, and treatment of suspicious cases; the province has launched a patriotic health campaign to strengthen environmental management and do a good job Management of the farmer's market and comprehensive implementation of various prevention and control measures.

Experts remind that there is a high incidence of respiratory infectious diseases in winter and spring, and indoor and public places must maintain indoor air circulation. The public should wash their hands frequently, pay attention to personal hygiene, and wear masks when going to crowded places. If you have fever or respiratory infection symptoms, especially if the fever persists, go to a medical institution for a fever clinic.
