[# 大连 执 Diagnostic1 例 新 肺炎 # Case] Today, a new patient with pneumonitis infected by a new coronavirus was diagnosed in Shandong. The patient was a 37-year-old male from Wuhan and worked in Rizhao, Shandong. Due to fever and other symptoms, he went to Rizhao City for treatment on the 17th, and went to Qingdao for treatment by himself that night. After pre-examination and triage, I learned that he had a history of living in Wuhan within two weeks before the onset of illness and was immediately admitted to hospital for isolation and treatment. At present, the patient's vital signs are stable. Eight close contacts in Qingdao and 45 in Rizhao are undergoing medical observation. (CCTV reporter Dou Xiaolei)

Wuhan. You can only be wronged before a disaster. It is migrant workers returning home to bring the virus to the local area. The consciousness in remote areas is weak. Especially some elderly people will not go to the hospital for headaches and brain heat, which will hurt more people.
