

**Facility Information Summary**

AER Reporting Year	2018
Licence Register Number	P0522-01
Name of site	Barclay Chemicals Manufacturing Limited Damastown
Site Location	Damastown Way, Damastown Industrial Park, Dublin 15
NACE Code	2020
Class/Classes of Activity	5.15 The production of plant health products and biocides
National Grid Reference (6E, 6 N)	305971, 241127

A description of the activities/processes at the site for the reporting year. This should include information such as production increases or decreases on site, any infrastructural changes, environmental performance which was measured during the reporting year **and an overview of compliance with your licence listing all exceedances of licence limits (where applicable) and what they relate to e.g. air, water, noise.**

Barclay Chemicals Manufacturing Ltd is based in Damastown Industrial Estate, Damastown, Mulhuddart, Dublin 15 and operates a facility that manufactures various agrochemical products. The formulation of pesticides, plant growth regulators and the intermediates involves the storage, use and transfer of a number of hazardous/flammable chemicals. The manufacturing process involves the blending and amination of raw inputs to form final products. Final product is then pumped to packaging lines where it is filled into suitably sized containers. Production on-site and infrastructure (equipment, utilities, tanks/vessels, bunds, sumps, pipework, and drainage) remain the similar to the previous year of reporting. Environmental performance for 2018 has been good, with no incidents or complaints of an environmental nature during the course of the year. There have been no non compliances with Condition of the licence (P0522-01) in 2018.

**Declaration:**

All the data and information presented in this report has been checked and certified as being accurate. The quality of the information is assured to meet licence requirements.

Are you required by your licence to undertake integrity testing on bunds and containment structures? If yes please fill out table B1 below listing all **new bunds and containment structures** on site, in addition to all bunds which failed the integrity test - all bunding structures which failed including mobile bunds must be listed in the table below, please include all bunds outside the licenced testing period (mobile bunds and chemstore included)

1 Please provide integrity testing frequency period  
 Does the site maintain a register of bunds, underground pipelines (including stormwater and foul), Tanks, sumps and containers? (containers refers to "Chemstore" type units and mobile bunds)  
 2 How many bunds are on site?  
 3 How many of these bunds have been tested within the required test schedule?  
 4 How many mobile bunds are on site?  
 5 Are the mobile bunds included in the bund test schedule?  
 6 How many of these mobile bunds have been tested within the required test schedule?  
 7 How many sumps on site are included in the integrity test schedule?  
 8 How many of these sumps are integrity tested within the test schedule?  
 9 Please list any sump integrity failures in table B1  
 10 Do all sumps and chambers have high level liquid alarms?  
 11 If yes to Q11 are these failsafe systems included in a maintenance and testing programme?  
 12 Is the Fire Water Retention Pond included in your integrity test programme?

Please provide an interpretation of groundwater monitoring data in the interpretation box below or if you require additional space please include a groundwater/contaminated land monitoring results interpretation as an additional section in this AER

At all sampling points pH levels and Chemical Oxygen Demand Levels have remained consistent year on year. No Groundwater Threshold Value for relevant parameters has been exceeded.

The chlorine containing compounds, Chloroform, Chlorodibromomethane and Bromodichloromethane were detected as being present at the GW1 sample location. Similar results for the same constituents have been recorded in recent years. A review of MSDS's for materials stored/used on-site determined there were no Chlorine-containing raw materials, intermediates or finished product present on-site. Trihalomethanes typically originate as a result of the discharge of water which has undergone chlorination treatment. As such, this is considered a possible explanation for the presence of such compounds in groundwater at the site. It is not considered such substances have arisen in groundwater as a result of on-site processes.
