Questions

1 Contributors

Each person contributing to creating or executing the data management plan should be added as a contributor. A project probably should have a Contact Person, and a Data Curator.

Tags: *maDMP, Science Europe DMP*

Answers

1.b.1 Name

Tags: *maDMP, Science Europe DMP*

✓ *Matus Kosut*

1.b.2 E-mail address

Tags: *maDMP, Science Europe DMP*

✗ This question has not been answered yet!

1.b.3 ORCID Identifier

Tags: *maDMP, Science Europe DMP*

✗ This question has not been answered yet!

1.b.4 Affiliation

Tags: *Science Europe DMP*

✗ This question has not been answered yet!

1.b.5 Role

Roles in a project should be given as they are defined by [datacite](#).

You should specify at least one "Contact Person". If your project has a work package for data management, identify the leader of that work package as "Data Curator".

Tags: *maDMP, Science Europe DMP*

✓ *a. Contact Person*

1.c.1 Name

Tags: *maDMP, Science Europe DMP*

✓ *Anne Heidi Skogholt*

1.c.2 E-mail address

Tags: *maDMP, Science Europe DMP*

✗ **This question has not been answered yet!**

1.c.3 ORCID Identifier

Tags: *maDMP, Science Europe DMP*

✗ **This question has not been answered yet!**

1.c.4 Affiliation

Tags: *Science Europe DMP*

✗ **This question has not been answered yet!**

1.c.5 Role

You should specify at least one "Contact Person". If your project has a work package for data management, identify the leader of that work package as "Data Curator".

Tags: *maDMP, Science Europe DMP*

✓ *d. Data Manager*

2 RI

Add each of the project(s) that are you will be working on and for which the data and work are described in this DMP. Give each project a small identifying name for yourself.

Tags: *maDMP, Science Europe DMP*

Answers

2.b.1 RI name

Tags: *maDMP, Science Europe DMP*

✓ *BBN Norway*

2.b.2 Project short discription

Tags: *maDMP, Science Europe DMP*

✓ *National infrastructure for biobanking.*

2.b.3 Date the RI will started

Tags: *Science Europe DMP, maDMP*

✓ *2011*

2.b.4 Date the RI funding will end

Tags: *Science Europe DMP, maDMP*

✓ *-*

2.b.5 Funding

Add all the funding that are part of this project.

Tags: *maDMP, Science Europe DMP*

Answers

2.b.5.b.1 Funder

Specify the name of the funder that you ask for funding for your project. If the funder is not present in the suggested list, please specify a complete URL to the funder web site.

Tags: *Science Europe DMP, maDMP*

✓ *RCN*

2.b.5.b.2 Funding status

Tags: *Science Europe DMP, maDMP*

✓ *c. Granted*

2.b.5.b.3 Grant number

Tags: *maDMP, Science Europe DMP*

✗ **This question has not been answered yet!**

3 To execute the DMP, is additional specialist expertise required?

Tags: *Science Europe DMP*

✓ *a. No*

4 Do you require hardware or software in addition to what is currently available in the participating institutions?

✓ a. No

II. Re-using data

Before you decide to embark on any new study, it is nowadays good practice to check all options to re-use existing available data, either collected or generated by yourself in an earlier project, or data from others (Barend Mons calls this "Other PEople's Data And Services" or OPEDAS). This can include reusable data that have been created for an earlier study, and also so-called "reference data" which is used by many projects.

It is not because we can generate massive amounts of data that we always need to do so. Creating data with public money is bringing with it the responsibility to treat those data well and (if potentially useful) make them available for re-use by others. And the circle is only complete if such data is actually re-used.

Questions

1 Describe the utility of data produced at the RI; to whom might it be useful?

✓ Digitized biobank data.

2 Is there pre-existing data?

Are there any data sets available in the world that are relevant to your planned research?

Tags: *maDMP*, *Science Europe DMP*

Data Stewardship for Open Science: *atq*

✓ b. Yes

2.b.1 Will you be using any pre-existing data (including other people's data)?

Will you be referring to any earlier measured data, reference data, or data that should be mined from existing literature? Your own data as well as data from others?

Tags: *maDMP*, *Science Europe DMP*

Data Stewardship for Open Science: *ezi*

✓ b. Yes

2.b.1.b.1 What reference data will you use?

Much of today's data is used in comparison with reference data. You may be comparing your own data with a "standard set" which is maintained as a collection by someone else. Or you could be determining differences to a standard (in bioinformatics, a genome is often compared with a reference genome to identify genomic variants). If you use reference data, there are several other issues that you should consider. What are the reference data sets that you will use?

Tags: *Science Europe DMP*

Data Stewardship for Open Science: *quc*

Answers

2.b.1.b.1.b.1 Source of reference data set

Give the name of the data set. You will be shown suggestions of data bases from FAIRSharing, but you can also type the name of a data set that is not in FAIRsharing

Tags: *Science Europe DMP*

✓ *Ensembl*

 <https://fairsharing.org/bsg-d000330>

2.b.1.b.1.b.2 What are the conditions of use for this data sets?

Tags: *Science Europe DMP*

✓ *a. They are freely available for any use (public domain or CC0)*

2.b.1.b.1.b.3 Do you know in what format the reference data is available?

Do you know the data format of the reference data? Is this suitable for your work? Does it need to be converted?

Data Stewardship for Open Science: *jxb*

✓ *b. I need to convert it before using*

2.b.1.b.1.b.4 Is the reference data resource versioned?

Many reference data sets evolve over time. If the reference data set changes, this may affect your results. If different versions of a reference data set exist, you need to establish your "version policy".

Tags: *Science Europe DMP*

Data Stewardship for Open Science: *rgy*

✓ *a. No*

2.b.1.b.1.b.5 How will you make sure the same reference data will be available to reproduce results of your users?

Will the reference data in the version you use be available to others?

✓ *b. The provider keeps old versions around*

2.b.1.b.1.c.1 Source of reference data set

Give the name of the data set. You will be shown suggestions of data bases from FAIRSharing, but you can also type the name of a data set that is not in FAIRsharing

Tags: *Science Europe DMP*

✓ *Reference Sequence Database*

 <https://fairsharing.org/bsg-d000457>

2.b.1.b.1.c.2 What are the conditions of use for this data sets?

Tags: *Science Europe DMP*

✓ *a. They are freely available for any use (public domain or CC0)*

2.b.1.b.1.c.3 Do you know in what format the reference data is available?

Do you know the data format of the reference data? Is this suitable for your work? Does it need to be converted?

📖 Data Stewardship for Open Science: [jxb](#)

✓ *a. I can directly use it*

2.b.1.b.1.c.4 Is the reference data resource versioned?

Many reference data sets evolve over time. If the reference data set changes, this may affect your results. If different versions of a reference data set exist, you need to establish your "version policy".

📖 Tags: *Science Europe DMP*

📖 Data Stewardship for Open Science: [rgy](#)

✓ *a. No*

2.b.1.b.1.c.5 How will you make sure the same reference data will be available to reproduce results of your users?

Will the reference data in the version you use be available to others?

✓ *b. The provider keeps old versions around*

2.b.1.b.2 Will you use non-reference data sets?

📖 Tags: *Science Europe DMP*

✓ *a. Yes*

2.b.1.b.2.a.1 What existing non-reference data sets will you use?

Even if you will be producing your own data, you often will also be relying on existing data sets (e.g. from your own earlier projects). You may need to integrate your new data with an existing data set or retrieve additional information from related data bases. Will you be doing such things?

📖 Tags: *maDMP, Science Europe DMP*

📖 Data Stewardship for Open Science: [wya](#)

Answers

2.b.1.b.2.a.1.b.1 Non-reference data set

Give a name for the data set. You will get suggestions listing databases listed in FAIRSharing, but you can also specify data sets that are not listed.

📖 Tags: *Science Europe DMP*

✓ *Range of biobank-data.*

2.b.1.b.2.a.1.b.2 Where is this data set available

Specify a URL or a persistent identifier (e.g. DOI) for the data set.

📖 Tags: *Science Europe DMP*

✓ *From data controller.*

2.b.1.b.2.a.1.b.3 What are the conditions of use for this data set?

Tags: *Science Europe DMP*

✓ *c. They are available under some restrictions, which we will follow in our project*

2.b.1.b.2.a.1.b.3.c.1 What conditions?

Please describe the conditions.

Tags: *Science Europe DMP*

✓ *Controller restrictions based on gdpr and norwegian laws and consent.*

2.b.1.b.2.a.1.b.4 Will the owners of this data set work with you on this study?

Data Stewardship for Open Science: [dcy](#)

✓ *c. We are the owners*

2.b.1.b.2.a.1.b.5 Is extension of any consent for privacy sensitive data needed?

If the data that you will re-use is coupled to people, the informed consent that was originally obtained from those people may not be covering your current research. In that case re-consent may be necessary.

Tags: *maDMP, Science Europe DMP*

Data Stewardship for Open Science: [bgv](#)

External Links: [Legal bases for personal data processing under GDPR](#)

✓ *a. Not applicable: none of the data is personal data*

2.b.1.b.2.a.1.b.6 Can you use the data in a format that is available?

Do you know the data format of the data? Is this suitable for your work? Does it need to be converted?

✓ *a. I can directly use it*

2.b.1.b.2.a.1.b.7 How will you be accessing the data?

Tags: *Science Europe DMP*

✓ *a. Already have a copy*

2.b.1.b.2.a.1.b.8 Is the data set fixed, or will it be updated in the future?

Is the data set you will reuse a fixed data set (with a persistent identifier), or is it a data set that is being worked on (by others) and may be updated during your project or after?

✓ *a. It is a fixed data set, this will not influence reproducibility of my results*

2.b.1.b.2.a.1.b.9 Can you and will you use the complete existing data set?

If you use any filtering, how will you make sure that your results will be reproducible by yourself and others at a later time?

✓ *a. I will use the complete data set*

2.b.1.b.3 Will you couple existing (biobank) data sets?

✓ *b. Yes*

2.b.1.b.3.b.1 Will you use deterministic couplings?

Data sets that have exactly identical fields that are well filled can be coupled using deterministic methods. Will you be using such methods?

✓ *b. Yes*

2.b.1.b.3.b.2 Will you be using a trusted third party for coupling?

What will be the procedure that is followed? Where will what data be sent? Did a legal advisor look at the procedures?

✓ *no*

2.b.1.b.3.b.3 Is consent available for the couplings?

✓ *b. Yes*

2.b.1.b.3.b.4 How will you check whether your coupled data are representative of your goal population?

Sometimes, through the nature of the data sets that are coupled, the coupled set is no longer representative for the whole population (e.g. some fields may only have been filled for people with high blood pressure). This can disturb your research if undetected. How will you make sure this is not happening?

✓ *no*

2.b.1.b.3.b.5 What is the goal of the coupling?

✓ *a. More data about the same subjects (intersection)*

2.b.1.b.3.b.6 What variable(s) will you be using for the coupling?

✓ *From 0-1000.*

2.b.1.b.3.b.7 Will you use probabilistic couplings?

Data sets that have similar but not identical fields or with identical fields that are not consistently filled can be coupled using probabilistic methods. Will you be using such methods?

✓ *a. No*

2.b.2 Do you need to harmonize different sources of existing data?

If you are combining data from different sources, harmonization may be required. You may need to re-analyse some original data.

📖 Data Stewardship for Open Science: [*wht*](#)

✓ *b. Yes*

2.b.2.b.1 Will you be making your harmonization results available to others?

By publishing either exactly what you did or (better) make sure that the harmonized data is available for reuse, you may save others the effort

✓ *b. Yes*

2.b.3 Will you be using data that needs to be (re-)made computer readable first?

Some old data may need to be recovered, e.g. from tables in scientific papers or may be punch cards.

📖 Data Stewardship for Open Science: [pth](#)

✓ a. No

III. Creating and collecting data

We will make sure that we know what data will be generated at the RI and when it will be generated. We also need to make sure that there will be adequate storage space to deal with it, and that all the responsibilities have been taken care of.

Questions

1 What data formats/types will you/your users be using?

Have you identified types of data that you will use that are used by others too? Some types of data (for example "images" or "tables") are used by many different projects. For such data, often common standards exist (in our example "PNG" and "CSV") that help to make these data reusable. Are you using such common data formats?

You should make sure also to list the formats used in any data sets that you are re-using.

🔖 Tags: *Science Europe DMP*

📖 Data Stewardship for Open Science: [njy](#)

Answers

1.b.1 Data format/type

🔖 Tags: *Science Europe DMP*

✓ *BGEN*

1.b.2 Is this a standard data format used by others in this field?

🔖 Tags: *Science Europe DMP*

✓ *b. Yes*

1.b.3 Does this data format enable sharing and long term archiving?

Complicated (binary) file formats tend to change over time, and software may not stay compatible with older versions. Also, some formats hamper long term usability by making use of patents or being hampered by restrictive licensing.

Tags: *Science Europe DMP*

✓ *b. Yes*

1.b.4 What volume of data of this type will you be working with?

Tags: *Science Europe DMP*

✓ *d. The user will have to take care of data storage immediately*

2 Will you/your users be using new types of data?

Sometimes the type of data you collect can not be stored in a commonly used data format. In such cases you may need to make your own, keeping interoperability as high as possible.

Data Stewardship for Open Science: [ikk](#)

✓ *a. No, all of my data will fit in common formats*

3 How will you/your users be storing metadata?

For the re-usability of your data by yourself or others at a later stage, a lot of information about the data, how it was collected and how it can be used should be stored with the data. Such data about the data is called metadata, and this set of questions are about this metadata.

[SEEK](#) is a webtool to store (meta)data and provenance. The public global instance [FAIRDOMHub](#) is free to users in Norway. SEEK can be integrated with the data storage and analysis platform for users in Norway [NeLS](#).

Data Stewardship for Open Science: [rhm](#)

External Links: [SEEK](#)

✓ *a. Explore*

3.a.1 Do suitable 'Minimal Metadata About ...' (MIA...) standards exist for your experiments?

External Links: [FAIRsharing repository of standards](#)

✓ *a. No*

Did you really check a service like fairsharing.org to verify this?

3.a.1.a.1 Do you have a good idea of what metadata is needed to make it possible for others to read and interpret your data in the future?

External Links: [FAIRsharing repository of standards](#)

✓ *b. Yes*

3.a.2 Do you know how and when you will be collecting the necessary metadata?

Often it is easiest to make sure you collect the metadata as early as possible.

External Links: [FAIRsharing repository of standards](#)

✓ *b. Yes*

3.a.3 Will you consider re-usability of your data beyond your original purpose?

Adding more than the strict minimum metadata about your experiment will possibly allow more wide re-use of

your data, with associated higher data citation rates. Please note that it is not easy for yourself to see all other ways in which others could be reusing your data.

✓ *b. Yes, I will document more metadata than needed for reproducibility*

3.a.3.b.1 How will you balance the extra efforts with the potential for added reusability?

✓ *a. I will see what I can do*

3.a.3.b.2 Do you need to exchange your data with others?

✓ *a. No*

3.a.4 Did you consider how to monitor data integrity?

Working with large amounts of heterogenous data in a larger research group has implications for the data integrity. How do you make sure every step of the workflow is done with the right version of the data? How do you handle the situation when a mistake is uncovered? Will you be able to redo the strict minimum data handling?

📖 Data Stewardship for Open Science: [spg](#)

✓ *a. Explore*

3.a.4.a.1 Will you be keeping a master list with checksums of certified/correct/canonical/verified data?

Data corruption or mistakes can happen with large amounts of files or large files. Keeping a master list with data checksums can be helpful to prevent expensive mistakes. It can also be helpful to keep the sample list under version control forcing that all changes are well documented.

✓ *a. No*

3.a.4.a.2 Will you define a way to detect file or sample swaps, e.g. by measuring something independently?

This will depend on the applied methods. Examples could include e.g. verifyBamID for known genotypes

✓ *a. No*

3.a.5 Do all datasets you work with have a license?

It is not always clear to everyone in the project (and outside) what can and cannot be done with a data set. It is helpful to associate each data set with a license as early as possible in the project. A data license should ideally be as free as possible; any restriction like 'only for non-commercial use' or 'attribution required' may reduce the reusability and thereby the number of citations. If possible, use a computer-readable and computer-actionable license.

✓ *a. No*

3.a.6 How will you keep provenance?

To make your experiments reproducible, all steps in the data processing must be documented in detail. The software you used, including version number, all options and parameters. This information together for every step of the analysis is part of the so-called data provenance. There are more questions regarding this in the chapter on data processing and curation.

✓ *a. All steps will be documented in an (electronic) lab notebook*

3.a.7 How will you do file naming and file organization?

Putting some thoughts into file naming can save a lot of trouble later.

✓ *a. Explore*

3.a.7.a.1 Did you make a SOP (Standard Operating Procedure) for file naming?

It can help if everyone in the project uses the same naming scheme.

✓ *a. No*

3.a.7.a.2 Will you be keeping the relationships between data clear in the file names?

Advice: Use the same identifiers for sample IDs etc throughout the entire project.

✓ *a. No*

3.a.7.a.3 Will all the metadata in the file names also be available in the proper metadata?

The file names are very useful as metadata for people involved in the project, but to computers they are just identifiers. To prevent accidents with e.g. renamed files metadata information should always also be available elsewhere and not only through the file name.

✓ *b. Yes, all metadata is also explicitly available elsewhere*

4 Please specify what data you will acquire using measurement equipment

You can use any name for the data set, make sure that it identifies the data set to yourself.

Questions

1 Will you collect or generate data about people?

✓ a. Yes

1.a.1 Will you collect and/or process personally identifiable data?

What is personally identifiable data?

Personal data is any information that can be connected to a person e.g. name, address, phone number, e-mail address, IP-address, car registration number, images, fingerprints, iris patterns, head shape (for facial recognition) and birth number, or through a combination of background information. Information about behavioral patterns may also be considered as personal data.

Sensitive personal data is information relating to racial or ethnic origin, political, philosophical or religious beliefs, that a person has been suspected, charged or convicted of a crime, health, sex life, and union membership.

Read more about personal and sensitive data at the [Data Inspectorate](#) and at the [NSD - Data Protection Services](#).

Sensitive data has to be stored and analysed using appropriate measures and infrastructure. (such as [TSD](#)) - You can apply for quotas through: contact@bioinfo.no

✓ a. Yes

🔗 External Links: [See also](#)

Answers

1.a.1.a.1.b.5.b.1 Data controller

GDPR Article 4 (7): “‘controller’ means the natural or legal person, public authority, agency or other body which, alone or jointly with others, determines the purposes and means of the processing of personal data; [...]” For cross-border collaborative projects the controllers of different datasets should be identified. Also, if joint controllership is considered, make sure that all parties understand their obligations, and it is probably good to define the terms for this in an agreement between the parties.

🔗 External Links: [Art. 4 - GDPR Definitions](#)

Answers

1.a.1.a.1.b.5.b.1.b.1 List the data controller(s)

✓ .

1.a.1.a.1.b.5.b.1.b.2 Is there more than one controller of the personal data in the dataset?

✓ c. Needs to be investigated

1.a.1.a.1.b.6 What is the legal basis for processing the personal data?

GDPR - Article 6 (1) lists under what conditions the processing is considered lawful. Of these, *Consent* or *Public interest* are relevant when it comes to research. You should determine what legal basis (or bases) you have for processing the personal data in your project. Traditionally, consent has been the basis for processing personal data for research, but under the GDPR there cannot be an imbalance between the processor and the data subject for it to be considered to be freely given. In some countries the use of consent as the legal basis for processing by universities for research purposes is therefore not recommended. In those cases, public interest should probably be your legal basis. Note that if your legal basis for processing is consent, a number of requirements exists for the consent to be considered valid under the GDPR. Consents given before the GDPR might not live up to this. Also note that even if public interest is the legal basis, other laws and research ethics standards might still require you to have consent from the subjects for performing the research. Please consult with the Data Protection Officer of your organisation on which legal basis to apply to your data.

🔗 External Links: [Art. 6 GDPR - Lawfulness of processing](#)

✓ b. Consent

1.a.1.a.1.b.6.b.1 Are consents in compliance with the GDPR?

✓ a. Yes

1.a.1.a.1.b.7 What are the exemptions for the prohibition for processing of special categories of data (such as health and genetic data)?

Processing of certain categories of personal data is not allowed unless there are exemptions in law to allow this. Among these categories (“sensitive data”) are “[...] data revealing racial or ethnic origin, [...] genetic data, [...] data concerning health”. Most types of personal data collected in biomedical research will fall under these categories. Article 9 (2) lists a number of exemptions that apply, of which consent and scientific research are most likely to be relevant for research. Please consult with your Data Protection Officer of your organisation.

🔗 External Links: [Art. 9 GDPR - Processing of special categories of personal data](#)

✓ c. Needs to be investigated

1.a.1.a.1.b.8 Have data processing agreements been established between the data controller(s) and any data processors?

A data processing agreement has to contain the obligatory clauses specified in Art 28.3 of the GDPR. The agreement should also regulate the use of any sub-processors.

🔗 External Links: [Art. 28 - GDPR Processor](#)

✓ a. Yes

1.a.1.a.1.b.8.a.1 List Processors

Answers

1.a.1.a.1.b.8.a.1.b.1 Processor

✓ .

1.a.1.a.1.b.8.a.1.b.2 Agreements

✓ .

1.a.1.a.1.b.9 Have Data Protection Impact Assessments (DPIA) been performed for the personal data?

List DPIAs done and for which parts of the data. *Note:* All Nordic Data Protection Authorities have identified that most types of research projects on health or genetic data require a DPIA.

Where a type of processing is likely to result in a high risk to the rights and freedoms of natural persons, the controller shall, prior to the processing, carry out an assessment of the impact of the envisaged processing operations on the protection of personal data, a so called Data Protection Impact Assessment (DPIA) - Article 35. To clarify when this is necessary, the Data Protection Authorities (DPAs) in [Denmark](#), [Finland](#), [Norway](#) and [Sweden](#) have issued guidance of when an impact assessment is required. Large-scale processing of sensitive data such as genetic or other health related data is listed by all DPAs as requiring DPIAs. The French DPA has made a [PIA tool](#) (endorsed by several other DPAs) available that can help in performing these impact assessments. Please also consult your Data Protection Officer of your organisation.

🔗 External Links: [Art. 35 GDPR - Data protection impact assessment](#), [Datatilsynet: When must an impact assessment be carried out?](#), [The open source PIA software helps to carry out data protection impact assesment](#)

✓ a. Yes

1.a.1.a.1.b.9.a.1 DPIA

✓ -

1.a.1.a.1.b.10 What technical and procedural safeguards have been established for processing the data?

To ensure that the personal data that you process in the project is protected at an appropriate level, you should apply technical and procedural safeguards to ensure that the rights of the data subjects are not violated. Examples of such measures include, but are not limited to, pseudonymisation and encryption of data, the use of computing and storage environments with heightened security, and clear and documented procedures for project members to follow.

✓ .

1.a.1.a.1.b.11 What happens with the dataset after project completion?

The GDPR states that the processing (including storing) of personal data should stop when the intended purpose of the processing is done. There are, however, exemptions to this e.g. when the processing is done for research purposes. Also, from a research ethics point of view, research data should be kept to make it possible for others to validate published research findings and reuse data for new discoveries. This is also governed by what the data subjects have been informed about regarding how you will treat the data after project completion. The recommendation is to deposit the sensitive data in the appropriate controlled access repositories if such are available, but this requires that the data subjects are informed and have agreed to this. Other considerations

✓ a. The dataset will be deleted

1.a.1.a.1.b.12 Are there other relevant national legislation considerations that has to be taken into account?

🔗 External Links: [Lov om helseregistre og behandling av helseopplysninger \(helseregisterloven\)](#), [Lov om medisinsk og helsefaglig forskning \(helseforskningsloven\)](#), [Forskrift om organisering av medisinsk og helsefaglig forskning](#), [Merknader til forskrifter til Helseforskningsloven](#), [Veileder til Helseforskningsloven](#), [Forskrift om befolkningsbaserte helseundersøkelser](#), [Lov om helsepersonell mv \(helsepersonelloven\)](#), [Lov om pasient- og brukerrettigheter \(pasient- og brukerrettighetsloven\)](#), [Lov om legemidler mv \(legemiddelloven\)](#), [Forskrift om klinisk utprøving av legemidler til mennesker](#), [Norm for helsedata](#), [Lov om humanmedisinsk bruk av bioteknologi mm \(bioteknologiloven\)](#), [Lov om arkiv \[arkivlova\]](#), [Lov om organisering av forskningsetisk arbeid \(forskningsetikkloven\)](#)

✓ c. Needs to be investigated

1.a.1.a.1.b.13 Are there other Terms & conditions for data access (in particular if presenting obstacles for cross-border processing of health data)?

E.g. register data access policies (requirement of PI in the same country, moving data to other secure services)

✓ a. Yes

1.a.1.a.1.b.13.a.1 Which?

✗ This question has not been answered yet!

1.a.2 Other comments regarding processing of personal data

✓ .

2 Will the RI follow any institutional policies, codes of conducts or other ethical guidelines?

Each researcher has an independent responsibility for making sure that the research is being carried out in accordance with general scientific and ethical principles and guidelines. For an overview of general and subject-specific research ethics guidelines, see the [Norwegian National Research Ethics Committees](#). Note that in multidisciplinary projects it may be relevant to look to guidelines for several subject areas. In addition, the [Research Ethics Act](#) applies to all research in Norway. Also, check which guidelines apply to your institution.

✓ a. Yes

2.a.1 Provide names and links below.

✓ <https://hunt-db.medisin.ntnu.no/hunt-db/privacy>

3 Other ethical / legal issues.

V. Processing data

In the processing phase, the data will be undergoing the mostly automated steps for processing, before the analysis and interpretation.

Questions

1 Will you be providing the data to the user through a shared working space ?

Will you be using a working space that is shared between all the people working on the data in the project? Sometimes such a system is called a *Virtual Research Environment*.

Tags: *Science Europe DMP*

✓ a. No

1.a.1 Are data that users store themselves adequately backed up and traceable?

Tags: *Science Europe DMP*

✓ b. Yes, protected against both equipment failure and human error

2 Data storage systems and file naming conventions

It is a good idea to pre-define how data will be organised in the project work space, and to set conventions for how any data files and folders will be named.

Tags: *Science Europe DMP*

✓ a. Explore

2.a.1 Are you using a filesystem with files and folders?

Are some of the data in the project stored in a filesystem with files and folders?

Tags: *Science Europe DMP*

✓ b. Yes

2.a.1.b.1 Will you use a folder for each sample/subject?

Tags: *Science Europe DMP*

✓ a. No

2.a.1.b.2 Will you use a (sub)folder for each (repeated) analysis?

Tags: *Science Europe DMP*

✓ *a. No*

2.a.1.b.3 Will you use a (sub)folder for each step in the analysis workflow?

Tags: *Science Europe DMP*

✓ *a. No*

2.a.1.b.4 What appointments have you made about the naming of files?

Make sure names are relatively short, and avoid spaces and special characters. You can use underscore characters, and consider using unique identifiers for the samples/experiments. You can consider to add versioning using the date in YYYYMMDD format.

Tags: *Science Europe DMP*

✓ .

2.a.2 Will you be storing data in an "object store" system?

Tags: *Science Europe DMP*

✓ *a. No*

2.a.3 Will you use a relational database system to store project data?

Tags: *Science Europe DMP*

✓ *a. No*

2.a.4 Will you use a graph database for data in the project?

Tags: *Science Europe DMP*

✓ *a. No*

2.a.5 Will you be storing data in a triple store?

Tags: *Science Europe DMP*

✓ *a. No*

3 Workflow development

It is likely that you will be developing or modifying the workflow for data processing. There are a lot of aspects of this workflow that can play a role in your data management, such as the use of an existing work flow engine, the use of existing software vs development of new components, and whether every run needs human intervention or whether all data processing can be run in bulk once the work flow has been defined.

✓ *a. This has been arranged*

4 How will you make sure to know what exactly has been run?

✓ *a. Explore*

4.a.1 Will you keep results together with all processing scripts or workflows including documentation of the versions of the tools that have been run?

✓ *b. Yes*

4.a.2 Will you make use of the metadata fields in your output data files to register how the data was obtained?

File formats like VCF (for genetics) and TIFF (for images) have possibilities to document metadata in the file header. It is a good idea to use work flow tools that use these fields to document what was done to obtain the data.

✓ *b. Yes*

4.a.3 Will you use a central repository for all tools and their versions as used in your RI/for each user project?

Especially if analysis and processing of data in the project is done on multiple different computers by different people, it is a good idea to have your own repository of tools and their blessed versions.

📖 Data Stewardship for Open Science: [p2q](#)

✓ *b. Yes*

4.a.4 Will you use a central repository for reference data used at your RI?

Especially if analysis and processing of data in the project is done on multiple different computers by different people, it is a good idea to have your own repository of reference data versions.

📖 Data Stewardship for Open Science: [p2q](#)

✓ *b. Yes*

4.a.5 Will you make use of standard workflow engines and automatic workflows for all data analysis at your RI?

It is much easier to guarantee consistency and reproducibility if all data processing is done using automated work flows, especially if the workflow engine automatically keeps adequate provenance data.

✓ *b. Yes*

4.a.6 Are all software tools in the workflow professionally maintained, with version control?

Will you be able to find and reproduce exactly which version was used for any analysis? Not only for the major tools in the workflows, but also for all 'glue' code and small tools you created especially for the project?

✓ *b. Yes*

5 How will you validate the integrity of the results?

✓ *a. Explore*

5.a.1 Will you run a subset of your jobs several times across the different compute infrastructures you are using?

There are surprisingly many complications that can cause (slight) inconsistencies between results when workflows are run on different compute infrastructures. A good way to make sure this does not bite you is to run a subset of all jobs on all different infrastructure to check the consistency.

✓ *b. Yes*

5.a.2 Will you be instrumenting the tools into pipelines and workflows using automated tools?

Surrounding all tools in your data processing and analysis workflows with the 'boilerplate' code necessary on the computer system you are using is tedious and error prone. Especially if you are using the same tools in multiple different work flows and/or on multiple different computer architectures. Automated instrumentation, e.g. by using a workflow management system, can prevent many mistakes.

✓ *b. Yes*

5.a.3 Will you use independently developed duplicate tools or workflows for critical steps to reduce or eliminate human errors?

Validation of results without a golden standard is very hard. One way of doing it is to develop two solutions for a problem (two independent workflows or two independently developed tools) to check whether the results are identical or comparable.

✓ *b. Yes*

5.a.4 Will you run part of data sets repeatedly to catch unexpected changes in results?

Running a small subset of the data repeatedly can be useful to catch unexpected problems that would otherwise be very hard to detect.

📖 Data Stewardship for Open Science: [egv](#)

✓ *b. Yes*

6 Do you need to do compute capacity planning?

If you require substantial amounts of compute power, amounts that are not trivially absorbed in what you usually have available, some planning is necessary. Do you think you need to do compute capacity planning?

✓ *b. Yes*

Standardized computing workflows and multiple tier storage is provided through [NeLS](#)

You can directly apply for big scale e-infrastructure resources in Norway at [Sigma2](#)

6.b.1 Do you know how much CPU power, memory and I/O band width a typical analysis will take?

Did you run pilot jobs? Do you know this information from comparable projects? Did you test whether the work scales up as you expected if you run more than one job?

✓ *a. No*

6.b.2 What type of compute architecture is most suitable for your work? Will you have that available?

✓ *c. We will use cloud computing*

6.b.3 Is there sufficient experience with the chosen computer in the RI, and sufficient time to support the RI partners/users?

[ELIXIR-Norway](#) provides support through its helpdesk and the option for collaborations on bigger projects

✓ *d. We have sufficient knowledge in the project*

6.b.4 Have you arranged with the provider when will you need the compute capacity?

Do you need the compute capacity also for development? Can you start developing locally and start with a deployment test later?

🔗 External Links: [NeLS](#), [Sigma2](#)

✓ *b. Yes*

6.b.5 Is all required compute capacity available close to the project working storage area?

✓ *b. Yes*

6.b.6 Will different groups work on different parts of the workflows at your RI? Will parts of the computing be done on 'local' infrastructure to the RI?

✓ *a. All steps of the workflow will be performed at central computing locations*

7 Is the risk of information loss, leaks and vandalism acceptably low?

There are many factors that can contribute to the risk of information loss or information leaks. They are often part of the behavior of the people that are involved in the project, but can also be steered by properly planned infrastructure.

🏷 Tags: *Science Europe DMP*

✓ *a. Explore*

7.a.1 Do RI members store data or software on computers in the lab or external hard drives connected to those computers?

When assessing the risk, take into account who has access to the lab, who has (physical) access to the computer hardware itself. Also consider whether data on those systems is properly backed up

🏷 Tags: *Science Europe DMP*

✓ *a. No*

7.a.2 Do RI members carry data with them?

Does anyone carry project data on laptops, USB sticks or other external media?

🏷 Tags: *Science Europe DMP*

✓ *a. No*

7.a.3 Do RI members store project data in cloud accounts?

Think about services like Dropbox, but also about Google Drive, Apple iCloud accounts, or Microsoft's Office365

✓ *a. No*

7.a.4 Do RI members send project data or reports per e-mail or other messaging services?

✓ *a. No*

7.a.5 Do all data centers where RI data is stored carry sufficient certifications?

🏷 Tags: *Science Europe DMP*

✓ *b. Yes*

7.a.6 Are all RI web services addressed via secure http (https://)?

Tags: *Science Europe DMP*

✓ *b. Yes*

7.a.7 Have RI members been instructed about the risks (generic and specific to the project)?

RI members may need to know about passwords (not sharing accounts, using different passwords for each service, and two factor authentication), about security for data they carry (encryption, backups), data stored in their own labs and in personal cloud accounts, and about the use of open WiFi and https

Tags: *Science Europe DMP*

✓ *b. Yes*

7.a.8 Did you consider the possible impact to the RI or organization if information is lost?

Tags: *Science Europe DMP*

✓ *b. Yes; the effect is small*

7.a.9 Did you consider the possible impact to the RI or organization if information leaks?

Tags: *Science Europe DMP*

✓ *c. Yes; the risk is acceptably low*

7.a.10 Did you consider the possible impact to the RI or organization if information is vandalized?

Tags: *Science Europe DMP*

✓ *b. Yes; the effect is small*

7.a.11 Are personal data sufficiently protected?

Tags: *Science Europe DMP*

✓ *d. Yes, all data will be anonymized as early as possible*

Please note that GDPR law in Europe specifies that data is only anonymous as long as nobody in the world has enough information to re-identify the subject.

8 Do you have a contingency plan?

What will you do if the compute facility is down?

✓ *a. We will wait until the problem is fixed*

9 Will you version datasets?

[SEEK](#) which is used in [FAIRDOMHub](#) and can be used together with [NeLS](#) supports versioning by default.

[NeLS](#) can also be used with [Git Large File Storage \(LFS\)](#)

External Links: [FAIRDOMHub](#), [SEEK](#), [NeLS](#), [Git Large File Storage \(LFS\)](#)

✓ *b. No*

VI. Interpreting data

The interpretation of the data consists of the last steps of processing (often with manual interventions), visualisation, and data integration. In this chapter many questions about data interoperability will come up.

1.a.1 List the data formats you will be using for data integration

Answer some questions for each

Answers

1.a.1.b.1 Data format:

✓

1.a.1.b.2 How is the data structured in general?

✓ d. We have made other arrangements

1.a.1.b.2.d.1 Describe how?

✓ .

1.a.2 Will you/your users be using a workflow for data integration, e.g. with tools for database access or conversion?

📖 Data Stewardship for Open Science: [qqb](#)

✓ b. Yes

1.a.3 Will you/your users use a 'linked data' approach?

🔗 External Links: [Linked data \(wikipedia\)](#)

✓ a. No

2 Will you/your users be using common or exchangeable units?

✓ b. Yes

3 Will you/your users be using common ontologies?

✓ *a. No*

4 Will there be potential issues with statistical normalization?

✓ *b. Yes*

5 Will you/your users be integrating different data sources to get more samples or more data points?

✓ *b. Yes*

5.b.1 Have these been collected with sufficiently identical protocols?

✓ *b. Yes*

6 Will you/your users be integrating different data sources in order to get more information for each sample or data point?

✓ *b. Yes*

6.b.1 Did you already select the variables on which you will join the data sets?

✓ *b. Yes*

6.b.2 Will you make sure that you do not inadvertently create a biased subset?

Some parameters you select on may have been collected only for a subset of the subjects or data points. An obvious example is if you match on secondary education type, you will bias to people over 18 years old because younger people do not have this field. In many cases the selection bias may be a lot less obvious and special measures exist to verify that the diversity of the sample is not reduced by the integration step.

✓ *b. Yes*

6.b.3 Could the coupling of data create a danger of re-identification of anonymized privacy sensitive data?

✓ *b. Yes*

Plan either preventative or corrective measures

6.b.4 Did you make a conscious decision to be either accurate or complete?

If the coupling parameters are lenient, you will find more connections than when they are strict. But you may find that they are less accurate. This is a balance.

✓ *b. We can balance the two*

7 Do you/your users have all tools to couple the necessary data types?

✓ *b. Yes*

8 Will you/your users be doing (automated) knowledge discovery?

 Data Stewardship for Open Science: [bzu](#)

✓ *b. Yes*

VII. Preserving data

In this chapter, issues regarding data publication and long term archiving are addressed.

Questions

1 Will you /your users be archiving data (using so-called 'cold storage') for long term preservation already during the RI runtime/project?

Much of the raw data you have will need to be archived for your own later use somewhere. This is often done off-line on tape, not on the disks of the compute facility. Please note that this does not refer to the data publication.

📖 Data Stewardship for Open Science: [kjp](#)

✓ *b. Yes*

1.b.1 Is the archived data changing over time, needing re-archival?

📖 Data Stewardship for Open Science: [tgk](#)

✓ *a. No*

1.b.2 Will the archive be stored on disk or on tape?

Data stored though [StoreBioinfo](#) and [NIRD](#) is backed up on disk.

🔗 External Links: [NeLS](#), [NIRD](#)

✓ *b. Tape*

1.b.3 Will the archive be stored in a remote location, protecting the data against disasters?

Data stored though [StoreBioinfo](#) or [NIRD](#) is geo replicated.

🔗 External Links: [NeLS](#), [NIRD](#)

✓ *b. Yes*

1.b.4 Will the archive need to be protected against loss or theft?

✓ *b. Yes*

1.b.4.b.1 Will the archive be encrypted?

✓ *c. Yes*

1.b.4.b.1.c.1 Is it clear who has access to the key? Also in case of a required data restore?

✓ *b. Yes*

1.b.4.b.2 Is it clear who has physical access to the archives?

✓ *b. Yes*

1.b.5 Will your project require the archives to be available on-line?

☰ Data Stewardship for Open Science: ybd

✓ *a. No*

1.b.6 Has it been established who has access to the archive, and how fast?

✓ *b. Yes*

1.b.6.b.1 Has it been established who can ask for a restore?

✓ *b. Yes*

1.b.6.b.2 Is the data voluminous?

✓ *a. Yes*

1.b.6.b.2.a.1 If the data is voluminous, will your RI/the users be able to cope with the time needed for a restore?

✓ *a. Yes*

1.b.6.b.3 Has authority over the data been arranged for when the RI/or a user project is finished (potentially long ago)? Is there a data access committee?

Consider who would decide on this when people or the PI leaves the project/institute.

✓ *a. No*

1.b.7 Has it been established how long the archived data need to be kept? For each of the different parts of the archive (raw data / results)?

Deposition repositories can be an option for storage of these.

☰ Data Stewardship for Open Science: kdp

✓ *b. Yes*

1.b.8 Will the data still be understandable after a long time?

See also all questions about keeping metadata and data formats. Make sure the metadata is kept close to the data in the archive, and that community supported data formats are used for all long term archiving.

☰ Data Stewardship for Open Science: zmu

✓ *b. Yes*

2 Specify details of data types which will be produced at your RI

It is useful to think about a data types as some collection of data that will be ending up in the same place.

Tags: *maDMP, Science Europe DMP*

Answers

No answer items

3 Will any of the repositories you use charge you/your users for their services?

Tags: *Science Europe DMP*

✓ *a. No*

4 Did you budget for the time and effort it will take to help user to prepare the data for publication?

Tags: *Science Europe DMP*

✗ **This question has not been answered yet!**

5 Will you be making sure that blocks of data deposited by you or by the users in different repositories can be recognized as belonging to the same study?

✗ **This question has not been answered yet!**

6 Are there any recurring fees to keep data or documents available?

Are you using any commercially licensed products to keep data, software or documents available, for which a regular fee must be paid?

✓ *b. Yes*

Make sure this will be kept running by the department or institute. It is best to also have a backup plan, being able to move data and documents to a different place if a service is discontinued. For this, you may need to arrange permission from all project partners beforehand.

7 Will you be archiving your data after the RI runtime in 'cold storage'?

Will you be storing (in cold storage) copies of your own data for a longer period after the project has ended? Possibly as a continuation of archival as part of data storage strategy during the project? Data archival is distinct from data publishing, an archive is usually limited in who can access the data.

Data Stewardship for Open Science: [*fxe*](#)

✓ *b. Yes*

7.b.1 Will data formats of data in cold storage be upgraded if they become obsolete?

✓ *a. No*

7.b.2 Will data be migrated regularly to more modern storage media (e.g. newer tapes)?

✓ *a. No*

8 Will you also publish data if the results of your study are negative/inconclusive or unpublishable?

Even if you do not obtain the results you had foreseen from your own study, the data can still be valuable for reuse in another context. Also, publishing the data can avoid that someone else collects a similar data set with a similar negative result.

✓ *a. No*

9 Specify a list of software packages you will be publishing

Specify a short name for each software package.

✗ This question has not been answered yet!

10 How will you be making sure there is good provenance of the data (and analysis)?

Data analysis is normally done manually on a step-by-step basis. It is essential to make sure all steps are properly documented, otherwise results will not be reproducible.

Tags: *Science Europe DMP*

✓ *b. We use an electronic lab notebook*

11 Will reference data be created?

Will any of the data that you will be creating form a reference data set for future research (by others)?

Data Stewardship for Open Science: [rbz](#)

✓ *a. No*

12 How will you document your/the user data?

For reusability, the data should be well documented. In this section of the questionnaire you can specify what kinds of documentation you will be providing.

Tags: *Science Europe DMP*

✓ *a. Explore*

12.a.1 Will you be documenting the data with Dublin Core metadata?

Dublin Core is a standard documenting domain independent aspects of a resource; including who has created it, audience, function, formatting and licensing. Does your documentation follow the Dublin Core standard?

Tags: *Science Europe DMP*

External Links: [Dublin Core Metadata Terms](#), [Dublin Core Initiative](#)

✓ *a. No*

12.a.2 Will you be documenting the data with W3C PROV provenance?

The W3C Prov standard documents processes (workflow) that were used to produce a resource. This can be used to document e.g. the software (including version) and parameters you use to analyze the data. Will your documentation follow the W3C Prov standard?

Tags: *Science Europe DMP*

External Links: [W3C Prov primer](#)

✓ *a. No*

13 Will you do systems biology modeling (for users)?

✓ a. No

14 Will you do structural modeling?

✓ a. No

VIII. Giving access to data

This chapter deals with the information needed by people who will re-use your data, and with the access conditions they will need to follow.

1 Will you be working with the philosophy 'as open as possible' for your data/your users data?

Tags: *Science Europe DMP*

Data Stewardship for Open Science: [jvm](#)

✓ b. Yes

2 Are there potential copyright and Intellectual Property Rights (IPR) issues?

✓ a. Yes

2.a.1 How will you manage copyright and Intellectual Property Rights (IPR) issues?

✓ .

3 Can all of your data at your RI become completely open immediately?

Tags: *maDMP, Science Europe DMP*

✓ a. No

3.a.1 Are there legal reasons why (some of your) data can not be completely open?

Tags: *maDMP, Science Europe DMP*

✓ b. Yes

3.a.1.b.1 Are there privacy reasons why data can not be open?

Tags: *maDMP*

✓ *b. Yes*

3.a.1.b.1.b.1 Are there restrictions on where the data need to be stored?

Tags: *maDMP*

✓ *c. Yes, they must stay in the same country*

3.a.1.b.1.b.1.c.1 Are you going to use a national platform for your data?

External Links: [NSD Archive](#), [EGA](#), [HUNT DB](#)

✓ *c. HUNT DB*

3.a.1.b.1.b.2 Could pseudonymization be used to make the data more openly available?

Legally, pseudonymous data (which means that someone has the key to reverse the process) is still considered privacy sensitive information. However, the EU is working on special cases where the data can still be opened as long as the key availability is sufficiently limited.

Tags: *maDMP*

✓ *a. No*

3.a.1.b.1.b.3 Could anonymization be used to make the data more openly available?

Different anonymization techniques exist. Disadvantage of anonymization is that data integration becomes virtually impossible, but it may be the only way to open up your data for other research

Tags: *maDMP*

✓ *a. No*

3.a.1.b.1.b.4 Could you use data aggregation to make the data openly available?

Aggregated data, where typically at least 15 individuals are in any data point, are considered sufficiently anonymous. This is an alternative way of making data openly available for future research

Tags: *maDMP*

✓ *b. Yes*

3.a.1.b.2 Are there IP reasons why data can not be open?

✓ *b. Yes*

3.a.1.b.2.b.1 Is it clear who owns data and documents?

✓ *b. Yes*

3.a.1.b.2.b.1.b.1 Who will own the intellectual property rights (copyrights) of the data that you will collect or create?

✓ .

3.a.1.b.2.b.2 Will someone be given decision power to move documents or data to a new place after the project has finished?

In one case in the past, all documents that had been assembled by a project in a documentation system had to be deleted because not a single person could decide to move them to a new platform when the

documentation system was going off-line.

✓ *b. Yes*

3.a.1.b.3 Will you/your users be allowing authenticated access to the data?

Tags: *Science Europe DMP*

✓ *b. Yes*

3.a.1.b.3.b.1 Where will the data be stored?

External Links: [The European Genome-phenome Archive \(EGA\)](#)

✓ *a. In a domain repository (like EBI's EGA) that arranges restricted access*

3.a.1.b.3.b.2 Who will take care of authentication of potential users?

✓ *b. We will use a single sign-on system such as FEIDE or ELIXIR-AAI*

3.a.1.b.3.b.3 Who will take care of authorization of potential users?

Tags: *Science Europe DMP*

✓ *c. We will make use of an existing data access committee*

3.a.1.b.3.b.3.c.1 Which existing Data Access Committee?

Tags: *Science Europe DMP*

✓ *Ethical Committees (REK)*

3.a.1.b.3.b.4 Are the criteria for application to access the data openly available (e.g . are there well described conditions for access (i.e. a machine readable license)?

✓ *b. Yes*

3.a.1.b.3.b.5 Has auditing for the re-use been arranged?

✓ *b. Yes*

3.a.2 Are there business reasons why (some of) the data at your RI can not be completely open?

Tags: *Science Europe DMP*

✓ *c. Yes, other business reasons*

3.a.2.c.1 What other business reasons are there not to open all data immediately?

Tags: *Science Europe DMP*

✓ *consent and laws for health information.*

3.a.3 Are there other reasons why (some of) the data at your RI can not be completely open?

Tags: *Science Europe DMP*

✓ *b. Yes, papers need to be submitted first*

3.a.4 Will you use a limited embargo?

Tags: *Science Europe DMP*

✓ *c. Yes, data that is not legally restrained will be released after a fixed time period, unconditionally*

3.a.4.c.1 What embargo period are you using?

After what period will restrictions on the reuse of data (except ethical and legal restrictions) fall away?

Tags: *Science Europe DMP*

✓ *3 year.*

4 Will there be valorization or translational returns of the data generated at your RI?

✓ *a. No*
