

Welcome, this is the report we created for your project.

We analysed the reviews that have been merged in the last year, focusing on which changes were applied to the code under review.

We found out that you successfully merged **28** reviews!

(please, note that we restricted the scope of our tool only to the Java files in your project)

ID: 17

Text / Instructions

Code changes happening during code review in your project

How does your code change thanks to the work your team puts during the reviews? The code changes that happen during the review process are, substantially, one of the main outcomes of the code review process. We call them *review changes*. How do these review changes look like in your project?

We could classify the review changes that happened during your code review process in two main categories:

- 1. **Functional** changes
- 2. **Evolvability** changes

1. Functional changes impact how the program functions. A reviewer may require a functional change to the code, for instance, to check how the variables or resources are used, as well as to improve an algorithm.

Here an example from your project:

```
31 */
32 public class ModelPathResourceSetInitializer implements IResourceSetInitializer {
33
34     @Override
35     public void initialize(ResourceSet resourceSet, IProject project) {
36         ModelPathDelegate modelPath = new ModelPathDelegate(project);
37         resourceSet.getLoadOptions().put(ResourceSetModelPathProvider.LOAD_OPT
38     }
```

```
31 */
32 public class ModelPathResourceSetInitializer implements IResourceSetInitializer {
33
34     @Override
35     public void initialize(ResourceSet resourceSet, IProject project) {
36         if(project != null) {
37             ModelPathDelegate modelPath = new ModelPathDelegate(project);
38             resourceSet.getLoadOptions().put(ResourceSetModelPathProvider
39         }
40     }
```

[Link to review](#)

2. Evolvability changes do not directly impact the functionality of a program, but make the software more maintainable and easier to evolve.

Examples of evolvability changes are reorganising the code, removing dead lines, and adding a comment.

ID: 19

Text / Instructions

Most of the changes that happen during the reviews in your projects are evolvability changes. For this reason, we further divided the **Evolvability** changes in **3 groups**:

2.1 Documentation: Changes that tackle any issue in the documentation of the code. They include changes to comments and names in the program.

An example from your project:

```
50 »      »      »      return super.open(platformURI, select);
51 »      »      »      else
52 »      »      »      return openExternalFile(uri);
53 »      »      »      }
54 »      »      »      }
55 »      »      »      public static URI getPlatformURI(URI uri) {
```

[Link to review](#)

2.2 Visual Representation: Changes that modify the layout of the code. In other words, any formatting that does not impact the compilation result.

An example from your project:

```
158 »      »      »      throw e;
159 »      »      »      }
160 »      »      »      }
161 »      »      »      }
162 »      »      »      /**
163 »      »      »      * Returns the name of this generator.
164 »      »      »      */
```

[Link to review](#)

2.3 Structure: Changes to the organisation of the code itself or how a particular solution is implemented (without having an effect on the functionality of the code).

```
84 »      »      »      URI uri = modelURIs.iterator().next();
85 »      »      »      //logger.logInfo("Loading " + uriString);
86 »      »      »      try {
87 »      »      »      if (loadModel(uri)) {
88 »      »      »      Resource resource = resourceSet.getResources()
89 »      »      »      System.out.println(resource.getURI());
90 »      »      »      for (EObject root : resource.getContents()) {
91 »      »      »      TreeIterator<EObject> it = root.eAllChildren();
92 »      »      »      while (it.hasNext()) {
```

[Link to review](#)

```
50 »      »      »      return super.open(platformURI, select);
51 »      »      »      else
52 »      »      »      return openExternalFile(uri);
53 »      »      »      }
54 »      »      »      }
55 »      »      »      /**
56 »      »      »      * Returns a platformURI which underlying file is accessible
57 »      »      »      */
58 »      »      »      public static URI getPlatformURI(URI uri) {
```

```
174 »      »      »      throw e;
175 »      »      »      }
176 »      »      »      }
177 »      »      »      }
178 »      »      »      /**
179 »      »      »      * Returns the name of this generator.
180 »      »      »      */
181 »      »      »      * Returns the name of this generator.
182 »      »      »      */
```

```
84 »      »      »      URI uri = modelURIs.iterator().next();
85 »      »      »      //logger.logInfo("Loading " + uriString);
86 »      »      »      try {
87 »      »      »      if (loadModel(uri)) {
88 »      »      »      Resource resource = resourceSet.getResources()
89 »      »      »      for (EObject root : resource.getContents()) {
90 »      »      »      TreeIterator<EObject> it = root.eAllChildren();
91 »      »      »      while (it.hasNext()) {
```

Visualising Review Changes Stats

This is a mock-up of our tool interface. Please take into account the space limitation; the following figure is meant to just give a general overview of the data. Our tool interface adds three new visualization on the bottom of the page.

The single graphs will be shown again with more details later in the report.

The graph in the bottom left shows the number of reviews merged per month.

The graph in the middle shows the amount of review changes according to the types we have presented before: Documentation (2.1), Visual representation (2.2), Structure (2.3) and Functional (1).

The graph in the bottom right shows the distribution of the review changes over the last year.
