

# Spectra-trait PLSR example using leaf-level spectra and leaf nitrogen content (Narea, g/m<sup>2</sup>) data from eight different crop species growing in a glasshouse at Brookhaven National Laboratory

Shawn P. Serbin, Julien Lamour, & Jeremiah Anderson

2022-03-14

## Overview

This is an R Markdown Notebook to illustrate how to load an internal dataset (“ely\_plsr\_data”), choose the “optimal” number of plsr components, and fit a plsr model for leaf nitrogen content (Narea, g/m<sup>2</sup>)

## Getting Started

### Load libraries

```
list.of.packages <- c("pls","dplyr","here","plotrix","ggplot2","gridExtra","spectratarait")
invisible(lapply(list.of.packages, library, character.only = TRUE))

## 
## Attaching package: 'pls'
## The following object is masked from 'package:stats':
## 
##     loadings

## 
## Attaching package: 'dplyr'
## The following objects are masked from 'package:stats':
## 
##     filter, lag

## The following objects are masked from 'package:base':
## 
##     intersect, setdiff, setequal, union

## here() starts at /Users/sserbin/Data/GitHub/spectratarait

## 
## Attaching package: 'gridExtra'
## The following object is masked from 'package:dplyr':
## 
##     combine
```

## Setup other functions and options

```
### Setup options

# Script options
pls::pls.options(plsralg = "oscorespls")
pls::pls.options("plsralg")

## $plsralg
## [1] "oscorespls"

# Default par options
opar <- par(no.readonly = T)

# Specify output directory, output_dir
# Options:
# tempdir - use a OS-specified temporary directory
# user defined PATH - e.g. "~/scratch/PLSR"
output_dir <- "tempdir"
```

## Load internal Ely et al 2019 dataset

```
data("ely_plsr_data")
head(ely_plsr_data) [,1:8]

##   Species_Code      Common_Name C_N_mass   C_g_m2 H20_g_m2 LMA_g_m2   N_g_m2
