

Figure 2. Expected probability of each Conservation Unit achieving Green Status when Enabling Strategy 2 Governance Solutions is implemented. Each of the management strategies (1 – 11), the combined strategies (12, 13, ALL), and the Future Baseline scenario (15) are shown as points and ranges. Values are based on expert best guess and lower and upper estimates, averaged over number of experts who provided estimates for the strategy and Conservation Unit, and multiplied by the feasibility of each strategy being successful. The grey lines show the business as usual estimates lower lower, best guess, and upper estimates given a baseline of no new management; the green line indicates a 50–50 chance, blue indicates 60% and pink line indicates 70% chance of achieving Green Status.
