# Introducing HADDOCK v3

# HADDOCK3's open-source repository

The screenshot shows the GitHub repository page for `haddocking/haddock3`. At the top, it indicates the repository is public and provides statistics: 13 Unwatch, 12 Fork, and 22 Star. Below this, navigation tabs include Code, Issues (43), Pull requests (4), Discussions, Actions, Projects (8), Security, Insights, and Settings. The repository is currently on the `main` branch, with 15 branches and 2 tags. A recent merge pull request #409 by `joaomcteixeira` is highlighted, with commit `31a55a5` from yesterday and 1,463 total commits. A file list shows folders like `.github`, `devtools`, `docs`, and `examples`, each with a brief description and update time. On the right, the 'About' section describes it as the official repo for the new modular BioExcel2 version of HADDOCK, with a link to [www.bonvinlab.org/software/haddock3](http://www.bonvinlab.org/software/haddock3). A QR code with a cartoon character is also present.

joaomc Teixeira Merge pull request #409 31a55a5 yesterday 1,463 commits

File	Description	Time
.github	add about CNS	2 months ago
devtools	removes prereqs env - not needed	5 months ago
docs	Merge branch 'testjobs' of https://github.com/joaomc Teixeira/haddock3 ...	2 days ago
examples	add integration tests scripts to tox lint	yesterday

About

The official repo of the new modular BioExcel2 version of HADDOCK

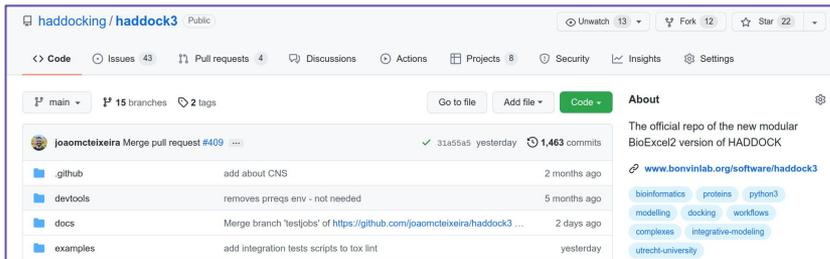

[www.bonvinlab.org/software/haddock3](http://www.bonvinlab.org/software/haddock3)

bioinformatics proteins python3  
modelling docking workflows  
complexes integrative-modeling

# How to start testing/using it

<https://github.com/haddocking/haddock3>

## Installation

Open a `terminal` window and navigate to the folder where you want to install HADDOCK3; for example: `software`. The current installation instructions are local and will affect only your user.

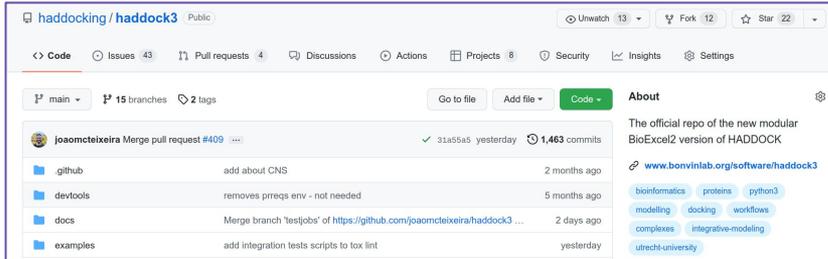

### 1 Clone this repository:

Mind the `--recursive` flag when cloning!

```
git clone --recursive https://github.com/haddocking/haddock3.git
cd haddock3
cd src/fcc/src
chmod u+x Makefile
make
cd -
```

By the end of the above commands, you should be back to the `haddock3` main folder.

## 2. Documentation

HADDOCK3-beta documentation is not yet hosted online. You need to generate it locally. First, install HADDOCK3 and activate the `haddock3` python environment as explained in the [installation instructions](#). Then, in your terminal window, run:

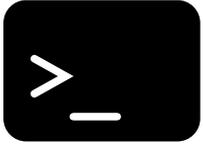

```
tox -e docs
```

*Ignore any warning messages.* After, use your favorite browser to open the file `haddock3-docs/index.html`. This will open a local webpage with the complete HADDOCK3 documentation. Navigate around, enjoy, and contribute.

# How to start testing/using it

# How to start testing/using it

```
$ haddock3 -h
```

# HADDOCK3 as a Python library

```
from haddock.clis.cli import main

main("path/to/my/file.cfg")
```

```
from haddock.modules.sampling.rigidbody import HaddockModule

rigidbody = HaddockModule(...)
print(rigidbody.params) # default parameters
rigidbody.updateparameters(sampling=10000)
rigidbody.run()
```

# Contribute

## Contributing to HADDOCK3

Welcome, we made many efforts to facilitate your contribution to this fantastic project. There

- you can improve tutorials and/or documentation
- improve the code itself (maybe you even found some bug 🐛?)
- improve error messages so they become clearer
- add a new simulation module altogether
- write more unittests (we dare you to do that 🤖)

Before attempting any development, please install HADDOCK3 following the instructions in the [INSTALL](#) file. Afterwards, follow the instructions in this file.

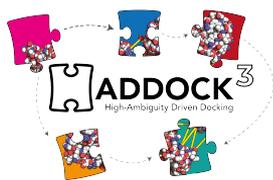

A screenshot of the HADDOCK3 3.0.0 documentation website. The page has a dark blue header with the text 'haddock3 3.0.0'. Below the header is a search bar labeled 'Search docs'. A dark sidebar on the left contains a list of navigation links: Installation, Installing third-party packages, Usage, Examples, Tutorials, Command-line interfaces, Modules, Testing, Contributing to HADDOCK3, Citing, and Library Reference. The main content area is white and features the heading 'Welcome to HADDOCK3 Documentation!' followed by the text 'You can read now through the contents below.' Below this is a 'Contents' section with a list of links: Installation, Installing third-party packages, Usage, Examples, Tutorials, Command-line interfaces, Modules, Testing, Contributing to HADDOCK3, Citing, and Library Reference.

# Future developments

1. pre-processing and cleaning of input PDBs (*almost implemented PR#144*)
2. Porting experimental restraints support from Haddock2 to Haddock3
3. Workflow branching and merge
4. Continue developing documentation and tutorials
