

Librarians as Partners in Citizen Science: Drivers and Barriers

Collaboration and participation perspectives for open research in the Baltics:
researchers, citizens, and librarians as partners

October 25, 2022

Svea Kaseorg

University of Tartu Library, Estonia

Erasmus+ KA2 Strategic Partnerships program

Project number: 2021-1-EE01-KA220-HED-000031125

Funded by
the European Union

Introduction

University libraries:

- foster Open Science within their organizations
- act as educators
- provide space, information, training opportunities for the society

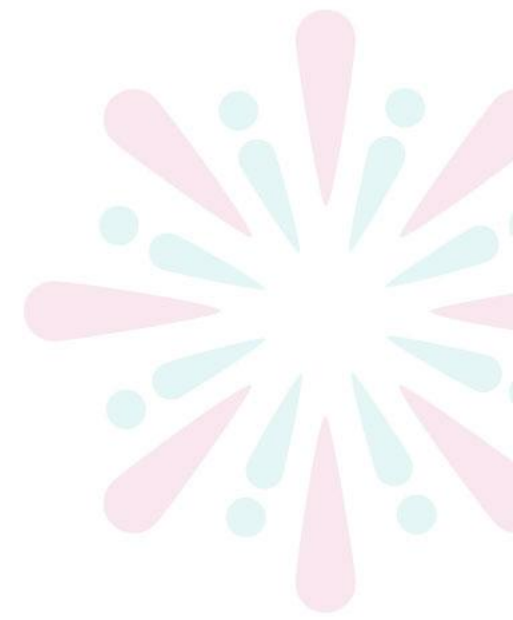

Yet,

- little to no collaborative projects
- no well established link between Open Science and civic engagement

Funded by
the European Union

Research questions

- What are the current drivers that could enable academic libraries to take part in citizen science projects?
 - What are the current barriers that have not enabled academic libraries to take part in citizen science projects?
 - How to further develop collaboration between academic libraries and civic engagement?
- 
- A large, stylized starburst graphic in the bottom right corner, composed of numerous teardrop-shaped segments in shades of pink and teal radiating from a central point.

Methodology

Three online roundtables with

- librarians (23)
- researchers (19)
- students (20)
- Thematic analysis of interviews

the European Union

Main themes

- Personal experience with citizen science
 - The drivers of civic engagement in academic libraries
 - The barriers of civic engagement in academic libraries

Library's role

- Librarians - could be both
- Scientists - potential as initiators
- Students - had no certain opinion

Main drivers

- Data management skills
- Digital literacy skills
- Large network
- Library as a physical meeting place
- Internal repositories
- Established and trusted communication channels

Photo by Gabriela Urm

“So I believe that libraries are and always were /.../ like a bridge between researchers, between students, between university administration's, like a bridge. So I believe that academic libraries could also aid in extending communication to the public.”

Main barriers

- Lack of knowledge about CS
- Lack of knowledge about libraries' services and potential
- Not enough visibility of CS projects
- Lack of workforce
- Not a priority for universities
- Lack of experience and specific skills
- Lack of ideas

„The barrier is the engagement of the universities itself. Because we still are a part of universities. So our works are priorities, I mean, dictated by the priorities of the university.“

Funded by
the European Union

Guidelines

- Train the staff of research libraries on data collection, management, and curation
 - Establish new positions in research libraries focused on citizen engagement
 - Appoint a liaison person at the research library who is responsible for uniting citizen scientists with the university faculty
 - Stress the need for stronger support from the universities
 - Establish a central platform which unites information about how to participate, which skills are needed and which projects are looking for volunteers
- 

Thank you!
