Israel is the world leader in the rate of vaccination, and the agreement with Pfizer will help continue to effectively vaccinate any interested individual.

In light of the success of the vaccination campaign in Israel and the high response of the public to get vaccinated, and in order to avoid a shortage of vaccines in Israel, the Ministry of Health asked Pfizer to advance the delivery of the vaccinations.

We are pleased to announce that an agreement has been signed with Pfizer to advance vaccine shipments starting in January.

The Israeli health system is one of the leaders in the world, thanks to the professional mechanisms of the HMOs, hospitals, laboratories and MDA. We continuously monitor the results of the vaccination campaign. Monitoring includes general data on epidemic morbidity - number of confirmed cases, critically ill, deaths and number of vaccinated individuals. This knowledge is important for understanding "real-world" data concerning the effect of the vaccine on coping with the epidemic.

This data is shared with the public on a daily basis, and the same information will be passed on to Pfizer.

Israel is the world leader in the rate of immunization. The agreement with Pfizer will help us continue to effectively vaccinate anyone who is interested in it and get back to the desired routine soon.
