

Mapping

Original name	CT	LC
maize	1200	11

Validity time

The validity time is estimated from attribute `export_end_date`. This highlights end date of a year defined from February to February which most overlaps with the observation. This period definition was introduced by CropHarvest. We took the year of the end date and combined it with the local crop calendar to estimate a date. For maize we took 1 April 2020.

IRR

No information on irrigation status

Filtering

Dataset is a subset of a larger dataset. In this case filtered on data set is Zimbabwe and points.

Correction

No correction was required.

Geometry transformations

No geometry transformation was performed

Spatial accuracy

No information on the GPS accuracy. The spatial accuracy was randomly checked. We did not find any issues.
