

YH System: Morality and own choices
Copyright: All rights reserved: Kubilay Bora Övün

This I already explored enough, but this can also be repeated here. Choices are bound directly to morality and higher forms of morality (supra morals - supmor).

As such it is important to look at the path of supmors to the DoC (decisions of change).

DoC0 —> supmor 0

The will to have a safety in values of higher forms than morality. This is how this starts. If others try to take away your values, you need to fight first for such, instead to wrongly succeed in a corrupted society. Safety of values and will is of crucial importance for the fundament of all other choices.

DoC1 —> supmor 1

Attention is used to form the self control as you do for higher forms of values than even morality.

DoC2 —> supmor 2

Logical allocations (Zuordnungen) should be done to make knowledge accordingly to higher values - higher than even morality.

If in science they follow moral nihilism and moral relativism with claims of, you shall not follow morals as you serve the industry and objective values do not exist - this in itself breaks morality and the second level of objective ways to use for morals and higher values. This was taught repeatedly to some sort at my university at psychology - while this university is seen as one of the top in its field in germany.

DoC3 —> Supmor 3

Systematizations are done to acknowledge properly accordingly to morality and higher values than morality. As it can be seen, this system I made does exactly that and proven already in the mini system.

Some but make systems, that serve to acknowledge good as bad and bad as good. For example: claims of determism of intellect by logically wrong conclusions of methological unfit testings to claim wild non sense to make it look like, they know genes determine your intellect. And then they claim it hierarchical - intelligence and do not look and compare intelligence and intellection as an ability to depict truth. As my work is the top - my intellection is as such the top of the world.

And they abused my work for an AI that was mine. They stole it for their greed and to dumb down humanity.

DoC4 —> supmor 4

The environmentalization - as to make a good environment is the choice needed to get to have success in a certain environment. If others but try to destroy your good you do and not let you - you still did the good environmentalization and may need to fight for it to happen and work out, if your work is worth for it to be defended to happen and fought for. This still counts as wanting to do it the proper way and doing it. The fault is then on others.

DoC5 —> Supmor 5

Possibilitization as to make good possibilities an option to use, is necessary to have carefreeness. This choice is needed then different forms of possibilities that opened up are there to be carefree of not necessarily going for one of the possibilities, while preferably all are used the good way if it can be or such which is of most importance.

For example the most important possibility in my life to work for and to try to make happen is that of getting together and being together with my wife.

DoC6 —> Supmor6

To materialize as a choice is needed to give something. And that on a good way. To just give, what other's do while being exploited is not really giving nor really gifting. This also includes to give of worth that I made to the public. It is not giving actually, but sharing what is exploited.

What happens if such rise who take and present it as theirs? They are not the ones able to materialize the good - but fake as if. And when they rise by rising the demands also to materialize good increases. And if they cannot fulfill it neither - especially not by just being copying frauds, in a desperate society, who just want sexism to go on and wise to be shown by the wrong people. Especially such will not be capable to fulfill their responsibilities and worsen it all by being fakers in power who drag down the entire world.

DoC 7—> supmor 7

If you realize by the means of your own perspective and person, you can also make agreements accordingly to what you realized into the world - which is further than just materializing it, but like finishing it properly. The YH system in itself is a finished work that I made. Others cannot make agreements on my behalf. Such agreements are about the good that you can realize, that you can make an agreement about, so the good is made as a mean to regard for.

DoC8 —> Supmor 8

The change of perspectives for realizing also for someone else or with them, can help to direct yourself and also others differently, while regarding morals and higher values.

DoC9 —> Supmor 9

The collective perspective to be realized with choosing for values, can lead to independency of such collective, but in regards to higher values.

This is not a trivial thing. Psychology relies on moral nihilism and moral relativism, to claim determinism by genes and environment - like it was before by racism - and doing work as demanded by the industry. This but also means, that they make the norm accordingly to how they dictate it to others. But lets just go one step back here. Here they claim health of the mind dependent on how you fit to the norm of society, and as such dependent on statistics of how the mass is. But if collective realization is done by objective values, then you have good actually - and objective values, that others need to do as such independence of an arbitrary mass and such norms by such.
