V439 "1968 WEIGHT"

Weight

All analysis on the entire sample using 1968 data only should be based on data weighted by this variable to reduce the biases from differential sampling and response rates. However, it is possible to use the SRC cross-section sample only, without weights, since the response rates did not vary so much as to produce substantial biases. Cross-section sample is identified by values of V3 (Family number) less than 3000

ER30001 "1968 INTERVIEW NUMBER "

1968 Interview Number (1968 ID Number)

This variable is the 1968 family ID number. The combination of this variable and Person Number (ER30002) provides unique identification for each individual on the data file. Individuals associated with families from the Latino and Immigrant samples, added to the PSID in 1990/1992 and 1997/1999, and 2017 respectively, were assigned 1968 IDs so that they, too, have unique identifiers compatible with the PSID structure for the core (SRC and Census) sample.

For those sample members either not yet part of the family in 1979 but present by 1984 or who were main family nonresponse in 1979 and moved back into the panel in 1984, the most recent weight is brought forward to these positions. **ER30608        "RELATION TO HEAD        89"**

1989 Relationship to Head

Note that these relationships are those to the 1988 Head for any individual whose 1989 sequence number (ER30607) is greater than 50, that is, has moved out of the FU. Therefore, to select current Heads, the user must select those coded 10 in this variable whose sequence numbers (ER30607=01).

**ER30641      "INDIVIDUAL WEIGHT      89"**

1989 Individual Weight

This variable is nonzero only for sample members associated with a 1989 response family. Sample members born into the family in 1989 receive either the average of the Head's and spouse's weights or, in the event of a single Head, the child receives the Head's weight. For those sample members either not yet part of the family in 1979 but present by 1984 or who were main family nonresponse in 1979 and moved back into the panel in 1984, the most recent weight is brought forward to these positions. Refer to Section I, Part 5, of the guide to the 1993 family data, 93GUIDE.PDF, for details on the weights themselves.

Note that these relationships are those to the 1991 Head for any individual whose 1992 sequence number (ER30734) is greater than 50, that is, has moved out of the FU. Thus, for example, if the 1991 Head is no longer present at the time of the 1992 interview, his or her relationship to Head is coded 10; the new 1992 Head also is coded 10. Therefore, to select current Heads, the user must select those coded 10 in this variable whose sequence numbers (ER30734=01).

**ER30736      "AGE OF INDIVIDUAL      92"**

Age at the Time of the 1992 Interview

The values for this variable represent the actual age of the individual reported in years on his or her most recent birthday. **ER30803      "CORE IND WEIGHT      92"**

1989 Core Weight, Updated for 1992

This weight variable is to be used only for analysis of the core sample. If you wish to analyze both the core and Latino samples, then see ER30732. If you wish to analyze only the Latino sample, then see ER30804. This variable is nonzero only for sample members associated with a 1992 core sample response family. Sample members born into the family in 1992 receive either the average of the Head's and spouse's weights or, in the event of a single Head, the child receives the Head's weight. For those sample members either not yet part of the family in 1989 but present by 1992 or who were main family nonresponse in 1989 and moved back into the panel in 1992, the most recent weight is brought forward to these positions. Refer to Section I, Part 5, of the guide to the 1993 family data, 93GUIDE.PDF, for details on the weights themselves.

**ER33275      "CORE INDIVIDUAL LONGITUDINAL WEIGHT      95"**

1995 Core Sample Individual Longitudinal Weight

This individual weight was recalculated for Release 3. It is to be used only for analysis of the core sample. This variable is nonzero only for sample members associated with a 1995 core sample response family. For details on the construction of this weight, go to the PSID website, [psidonline.isr.umich.edu/](http://psidonline.isr.umich.edu/): select 'Data & Documentation', then select 'Sample Weights', then 'PSID Longitudinal Weights', and 'PSID Revised Longitudinal Weights 1993-2005'.

If you wish to analyze both the core and Latino samples, then see ER33277. If you wish to analyze only the Latino sample, then see ER33276. Refer to Section I, Part 5, of the guide to the 1993 family data, 93GUIDE.PDF, for details on these weights.

The range of possible values for this variable is .282-109.916.

Release Number

May 2008: Variables ER16467 to ER16517, formerly available separately, have now been incorporated into this file, with new variable names. Variable ER16518 has been recalculated. Variable ER16519, a family cross-sectional weight, has been added.

November 2013: Added generated variables such as Family Composition Change (ER13008A), Births to HD/WF/OFUM (ER16517A-ER16517H), Region where HD grew up (ER16431A), HD Geographic Mobility (ER16431B), Interview length (ER13005B), mode of interview (ER13005C), and calls for interview (ER13005D). Also we have brought forward the background section for old Heads and Wives in section KL. Corrected data for Beale Rural-Urban Code (ER16431) although this variable will now be suppressed on the public release file.

February 2014: For Release 6 we have added one new variable Collapsed Beale (ER16431C). Additionally we have completed contingency corrections for a handful of cases for the family level T-2 variables ER16221-ER16223 ER16230-ER16245 after further cleaning of corresponding individual level T-2 variables.

January 2016: For Release 7 we have added one new variable Splitoff Indicator (ER13005E). Additionally we have corrected the top code values for A20 and A21 (ER13041 and ER13042) to match the codebook description. We have corrected the bottom code for H14/H38 (ER15544/ER15652) and H17/H41 (ER15547/ER15655) for both Head and Wife/"Wife" where 1 means one cigarette or fewer per day.

November 2017: For Release 8, we have added 25 generated food security variables (ER14331A-ER14331Y). The food security variables were put through the same imputation and calculation process as was completed on the 2015 data to produce food security scale score and category. We have also added the aggregated consumption variables (ER16515A1-ER16515D6). These variables were previously released on a supplemental file.

**ER33501 "1999 INTERVIEW NUMBER"**

1999 Interview Number (1999 ID Number)

The values for this variable represent the 1999 interview number of the family in which this individual was included in 1999. We interviewed a total of 6,997 families in 1999, 70 of whom were Immigrant "recontacts"--that is, who were eligible but nonresponse for the 1997 Immigrant sample or who were ineligible in 1997 but became eligible by 1999. This group of 70 families is referred to as the Immigrant recontact sample.

- 0 This individual was main family nonresponse by 1999 or mover-out nonresponse by 1997; from Latino sample (ER30001=7001-9308); from Immigrant 2017 sample (ER30001=4001-4462)

1999 Combined Core-Immigrant Sample Individual Longitudinal Weight

This individual weight was recalculated for Release 3. This weight variable enfolds the Immigrant recontact sample begun in this wave and also includes the 1997 Immigrant sample. Values are nonzero for sample members associated with either a 1999 core or 1999 Immigrant response family. No weight variable exists for analysis of the core or the Immigrant samples separately.

The range of possible values for this variable is .287-167.679.

**Non-comparability Notes Appendix**

- F-g** Field widths differ. Truncation of some variables in this list may be necessary. See codebooks.
- F-j** There was a greater possibility of double counting of food subsidies for total food expenditures in earlier years, which was largely eliminated beginning in 1972 with revised question formats. Since 1979 (reflected in 1980 and later years' data), food stamps have cost nothing, so errors should be negligible.
- F-pp** These variables are coded directly from Wives/"Wives" questionnaires, asked in 1976 and 1985, and reported by Wives/"Wives" themselves.
- F-y** Note that the weight variables are not comparable across waves. Three types of weights (core only, Latino only and combined core-Latino) were created beginning in 1990 because of the addition of the Latino sample. Be sure to select the proper weight for the sample being analyzed. For a discussion of weights, see Section I, Part 5 of the most current) Documentation or the User Guide. Weights for all years were retroactively recalculated in 1989.
- I-f** The 1983 and later years' codings of relationship to head are much more detailed than in previous years. We hope some day to recode relationship to head for 1968-1982 in the same detail.
- I-j** Categories differ; see codebook for details.
- I-k** Field width differs.
- I-l** Note that the weight variables are not comparable across waves. Three types of weights (core only, Latino only and combined core-Latino) were created for 1990 through 1995 because of the addition of the Latino sample. Beginning in 1993, weighting philosophy for recontacts changed. See Section I, Part 5 of the 1993, the 1990 and the 1992 documentation or the User Guide for further information and details. Weights were retroactively recalculated for all years in 1989.
