

Replication files for the paper

**THE DIFFERENTIAL IMPACT BY GENDER OF THE COVID-19
PANDEMIC ON THE LABOR OUTCOMES OF OLDER ADULTS**

by

Domenico Depalo
(Bank of Italy)

Santiago Pereda-Fernández
(Universidad de Cantabria)

These files should work after adjusting the *globals* in **1_master.do**.

We put all the material in a folder named *replication*. This folder contains three subfolders: *data*, *dofiles*, *results*. The first subfolder contains the data, the second the dofiles, and the third the results. The organization of the folder should look like:

Replication

data

dofiles

results

Please, notice that we use data from the “Survey of Health, Ageing and Retirement in Europe” (SHARE). **We can NOT share these data**, but you can visit the website <https://share-eric.eu/> and get all the necessary information to obtain them. We can NOT help in this step. **The data may be subject to revisions in the future. If so, the replication package would produce slightly different results.** If you are interested in the replication of the results in the paper, once you have your own access to SHARE data, drop us a line and we will share the version that we used.

Should you have comments, questions, critiques, please drop a line to
