Founding Reasons

- ▶ Make traditional resources more visible
- ▶ Provide key characteristics of resources
- ▶ Encourage human and machine assessment of these resources by applicability to semantic projects
- ▶ Promote information exchange and knowledge sharing

Hlava (2011): Developing an eclectic terminology registry

Collaborations

Inter-Active Terminology for Europe

View

Voting results

Abstract:

"In IATE you can find EU-specific terminology and jargon, as well as terms from all sorts of areas, such as law, agriculture, information technology and many others. IATE has 8.4 million terms, including approximately 540 000 abbreviations and 130 000 phrases, and covers all 23 official EU languages.

New terms are added every day and the contents are constantly updated. IATE plays a major role in ensuring the quality of the written communication of the EU institutions and bodies."

Alternative Title: IATE

Size: 8.4 million terms, including approximately 540 000 abbreviations and 130 000 phrases (2016-06)

Year of Creation: 1999

Author: Translation Centre for the Bodies of the European Union

VIAF: Translation Centre for the Bodies of the European Union[#]

Link: <http://iate.europa.eu>[#]

Topic: European Union

DDC: 001 Knowledge

ILC:

s: civil society, communities, groups, people t: governments, political power, political units, sovereign states

u: economies, economic systems v: technologies, technological systems, production systems

tUE: European Union, EU

Access: Free

Format: Online

Type: thesaurus

NKOS DC Application Profile

Zeng and Žumer (2015): Networked Knowledge Organization Systems Dublin Core Application Profile (NKOS AP) v0.2

- ▶ BARTOC is aligned with NKOS AP
- ▶ Some NKOS AP fields are not included or applicable [yet?]
- ▶ Additional constraints make sense

→ $\text{BARTOC RDF} \subset (\text{NKOS AP} \cup \text{Schema.org} \cup \text{FOAF})$

Metadata Schema Conversion

manual input → BARTOC database fields (Drupal)

⇒ Drupal → BARTOC RDFa (NKOS AP & schema.org)

⇒ Wrapper → JSKOS (SKOS & extensions)

Conversions don't preserve all information (\Leftrightarrow) but normalize

See Ledl and Voß (2016) for conversion details

- ▶ based on RDF (SKOS and DC Terms)
 - ▶ additional constraints for better normalization
 - ▶ support of mappings, concordances, and registries in addition to concept schemes and concepts
- ▶ based on JSON-LD
 - ▶ simplified and extended with closed world statements

Primary use case: **simple use in web applications**

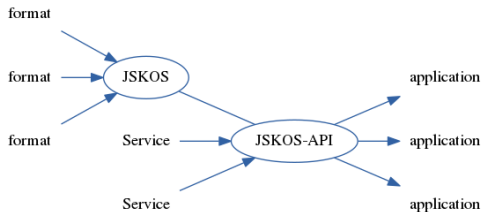

Specified at <https://gbv.github.io/jskos/>
