PENNSYLVANIA STATE WEATHER SERVICE BULLETIN

FOR MARCH, 1888.

HALL OF THE FRANKLIN INSTITUTE,

PHILADELPHIA, March 31, 1888.

Observers are requested to note and report the effect of late frosts on fruits and small crops, also to be prompt in sending in their Weekly Crop Reports, which should always be mailed on Friday. On these should be entered the time of seeding, harvesting, etc. The practice of attaching to these reports brief newspaper clippings relative to crops is commendable. Particular attention should be paid to the measurement of rainfall and the recording of the time of beginning and ending. Instructions to observers should be closely studied and followed, to give the highest value to their reports.

Correspondence is requested with a view of establishing stations in the counties from which no reports are received.

The Committee on Meteorology of the FRANKLIN INSTITUTE,

W. P. TATHAM, *Chairman.*
