diocri, pervio ; aperturâ subhorizontali, transversè ovali ; peristomate subsimplice, reflexo, marginibus junctis.

Diam. 30, alt. 12 mill.

Island of Zebu.

This shell has been often mistaken for *H. Lasallii*, Eydoux, and is in many collections under that name ; but *H. Lasallii* is not this species. It is quite congruent with *H. meretria*, Sow.

Richard C. Griffith, Esq., in the Chair.

Mr. H. E. Strickland exhibited a species of *Corvus*, discovered by Capt. H. M. Drummond, 42nd R. H., which the latter gentleman proposes to name *Corvus collaris*. In size and form it is closely allied to the Common Jackdaw, *Corvus monedula*, but differs in the much lighter silvery grey of the cheeks, occiput and nape, which passes into a well-marked patch of pure white on each side of the neck. The black on the crown is of less extent than in *Corvus monedula*, and the lower parts are of a slaty grey.

Capt. Drummond states that in Macedonia and Thessaly this bird takes the place of *C. monedula*, which is common in the south of Greece, and does not there differ from the Jackdaw of Britain.
