eminently distinguishes it from the various year-books and compendiums of medical knowledge which pour in such a flood from the press at the present time.

The volume is copiously illustrated with handsome cuts. J. H. G.

A REFERENCE HANDBOOK OF THE MEDICAL SCIENCES, EMBRACING THE ENTIRE RANGE OF SCIENTIFIC AND PRACTICAL MEDICINE AND ALLIED SCIENCE. By VARIOUS WRITERS. A new edition, completely revised and rewritten. Edited by ALBERT H. BUCK, M.D. Vol. IV, New York: William Wood & Co., 1902.

THE last volume of the new edition of this invaluable publication covers from Ergot to Infiltrations. Its encyclopædic character renders it difficult to write an analytical review, the immenso number of articles making it impossible to review all of them. As of special importance, however, may be mentioned the article by Royal Whitman on Disabilities of the Foot and Congenital Dislocation of the Hip. The article on Fractures, by Edward L. Keyes, Jr., is exhaustive and presents the most recent views on the subject. Glanders is considered by W. T. Councilman. Goitre is ably treated of by Joseph H. Pratt. The article on Wounds of the Heart, by Dr. Roswell Park, is worthy of the high standing of its author. Several biological questions of great interest are discussed, namely, Heredity, by Adami, and Evolution, by Bigelow.

In reviews of the previous volumes of this revised edition of this encyclopædia reference has been made to the fact that all of the articles have not only been revised but practically rewritten, so that the views presented are in accord with the very latest advancement in medical science.

The present volume contains quite a number of excellent colored plates, and, like the others, it is profusely illustrated with excellent pictures. F. R. P.

ESSENTIALS OF OBSTETRICS. By CHARLES JEWETT, A.M., M.D., Sc.D. 12mo., pp. 386. New York and Philadelphia: Lea Brothers & Co., 1901.

THIS is the best epitome of obstetrics with which we are familiar. It is sufficiently illustrated to make clear its text. Its contents are well selected, and attention drawn to salient features by judicious paragraphing and heavy type. It can be recommended to students and practitioners, and to lecturers who need to review salient points of obstetrics in preparing their instruction. E. P. D.
