The Economic Journal

—"this great social malady, fatal corollary of capitalism arrived at its decline." The concluding lecture is devoted to "Social Superstructures"—that is, social phenomena which arise, immediately or indirectly, from the economic system—more especially moral and legal institutions. The systems of law and of morality that exist are explained as the product of the fundamental antithesis between individual and public interest characteristic of capitalistic society. Justice and morality are the interest of the economically stronger. As a curious instance of Professor Loria's reasoning, we may mention his economic explanation of the opposition in Italy to divorce. The only thing that will assure the triumph of this reform is the expansion of industry and national commerce. The evolution of art again "suit docilement des rapports économiques."

In a final word Professor Loria acknowledges the reaction of the facts derived from economic phenomena upon those phenomena themselves; but it is always the economic fact which constitutes the hidden source of all social phenomena; and it is political economy which is the mother-science of all the social sciences and of their *grande synthèse*—sociology. We are inclined to agree that sociology can only exist and can only "attain to the dignity of an exact science" by taking as its point of departure the analysis of the economic fact; but whether it is likely to end or to get very far with the conception of "historic materialism" pure and simple is another question. The theory, as stated by Professor Loria, seems strangely unequal to the subtlety of nature or to the complexity of life. But it goes without saying that it is stated with great spirit and with an enthusiasm which some critics might think worthier of a clearer cause.

SIDNEY BALL

Henry Sidgwick. A Memoir. By A. S. and E. M. S. (London : Macmillan, 1906. Pp. 633.)

HENRY SIDGWICK is remembered by economists as one who shed light upon their science not only directly, but also by reflection from other worlds of thought. In respect of this double service he may be compared with several of his predecessors in that illustrious line of English philosophy which he worthily continued. What he says of J. S. Mill as an economist is true of himself :—"He brought a higher degree of philosophical reflection to bear upon his exposition of the common doctrines of the science."

Among passages in the book before us which refer to Sidgwick's purely economic studies the following appears particularly interesting :—

“ I have been reading all kinds of things lately. I find out that political economy is what I really enjoy as an intellectual exercise. It is just at the right stage of scientific progress and there are not too many facts to be got up.”

We forbear to expatiate on the reflections which this confession suggests—how much can be effected by “ intellectual exercise ” without “ too many facts,” in the way of clearing away the illusions which beset our subject ; how little in the way of concrete constructions on the site thus cleared ; whether many students can be expected to “ get up ” more facts than sufficed Sidgwick.

Sidgwick wielded the purely deductive organism with considerable power. But he especially excelled in handling what he called the “ Art of Political Economy.” This part of his economic treatise, the great Third Book, is much indebted to his ethical philosophy. From the Methods of Ethics is borrowed the dialectic by which it is concluded that the principle of Distributive Justice affords no certain sound, no clear direction, unless it is informed by the superior principle of Greatest Happiness. The Methods of Ethics are also required in order to interpret the utilitarian first principle : to exhibit the implication that the sum-total of happiness is increased by increasing the number of a prosperous population, and the *primâ facie* presumption in favour of equally distributing the means of happiness—a presumption limited by laws of human nature very general and deep-seated. These sublime topics are not explicitly re-handled in the memoir. But if we obtain no further guidance in the arduous region of first principles, still our confidence in the guide is increased. The life of the philosopher is calculated to add authority to his teaching. We do not profess to analyse philosophically the grounds of such authority. The reader may be referred to the paper printed in an appendix to the Memoir, in which Sidgwick has discussed Authority as a source of belief. Perhaps the sources of primary belief are described more justly than philosophers are ready to admit in the lines “ which occurred to Sidgwick in sleep, or which at least he awoke thinking of,” beginning

“ We think so because other people all think so,”

and continuing,

“ or because we were told so and think we must think so.”

However that may be, it is safe to say that the perusal of this well-composed narrative and well-compiled correspondence will deepen in many minds their respect for the judgment of Sidgwick. Memoirs of great teachers or preachers sometimes counteract the effect of their writings, by the exhibition of pettiness in private life. But Sidgwick sustains our respect by a certain elevation of mind, the quality which he himself describes when, with reference to "reading and thinking," and "the ultimate good to be derived in indirect ways" from mental cultivation, he says—

"this world, our little petty interests, are 'too much with us,' and anything that lifts us out of them is a gain. Indeed, I estimate men a good deal by their capacity for this elevation, 'soaring.'"

His friends and the readers of his life may say of him what he says of a lost friend:—

"I never knew anyone more free from what Goethe calls 'was uns alle bündigt das Gemeine.' After conversing with him I always felt that the great realities of Life and Thought and Art, the true concerns of the human spirit, became more real and fresh and vivid to me."

Those whose study of Sidgwick is confined to his philosophical writings may fail to realise how deeply his thought was tinctured with the wisdom which is diffused through literature, how diligently he studied human nature in the school of those masters who, in the phrase of one of them, are better teachers of conduct than "Chrysippus and Crantor." Sidgwick's sympathetic interest in everything human extended even to the antiquities of economic history. We shall not attempt—it would be out of place here—to portray the varied talents and virtues which, known already to the readers and the friends of Sidgwick, awake new admiration as reproduced in this memoir. But we have thought it not irrelevant to adduce some illustrations of the encomium which has already been pronounced in the *ECONOMIC JOURNAL* by the very competent judge who wrote the obituary notice of Sidgwick. In that appreciative study Mr. Keynes sums up his impressions by

"saying that he regards Professor Sidgwick not merely as the most intellectually gifted man he has ever met, but also as preeminently realising Aristotle's conception of the *φρόνιμος*, the impersonation of the standard of reason."

That Aristotelian character, it will be remembered, is the one of which it is written that we ought to defer even to the undemon-

strated dicta and opinions of the wise, who have a power of mental vision acquired by experience.

A conspicuous feature in Sidgwick's philosophy was the blending of practical wisdom with speculative doubt. He who reduced so many provinces of conduct under the sovereignty of the Utilitarian first principle still hesitated to complete the unification. It appears from the Memoir that this speculative doubt was never removed. We are here not entirely unconcerned with this scruple about first principles, so far as the Art of Political Economy involves the postulate that

"the ultimate criterion of the actions of government generally is their tendency to increase human happiness" (Sidgwick, *Politics*, ch. iii., § 3).

But let it be granted that conduciveness to general happiness is the end of political action; that in choosing between alternative policies the main question before the political economist is, which "may be expected to lead to most happiness so far as this depends on the production and distribution of the produce of industry?" (*Political Economy*, Book III., ch. vii., § 1).

There still may be hesitation as to the means conducing to that end. For

"we can no longer use the comparatively exact measurements of economic science, but only those more vague and uncertain balancings of different quantities with which the politician has to content himself" (*Ibid.*, ch. i., § 1).

Again and again, as each practical problem comes up for consideration, Sidgwick insists on this limitation of our faculties:—

"there is, I think, no theoretical solution: it can only be settled by a rough practical compromise" (*Ibid.*, ch. ii., § 2).

"It seems hardly possible to frame the regulations on any other principle than that of carefully balancing opposite expediences" (*Ibid.*, § 6).

Other philosophers formally admit, but are apt to forget in practice, that probability is the guide of life. To follow the better course and yet continue to see the indications which pointed in other directions was the peculiar virtue of Sidgwick. The editors' testimony as to this peculiarity—the testimony of a brother and a wife—deserves attention.

"He always had a vivid perception of the other side of a question, and was eager to take into account what was valid in an opponent's position, so that in practical affairs he generally acted consciously on a balance of advantages, not on any overpowering conviction that the course he adopted must certainly be right; there was no element

of fanaticism in anything he did, and his temperament was not a sanguine one. The result was not indecisiveness in action. When he took up any matter—for instance, the education of women—he worked at it with a deliberate zeal and unwavering, single-minded, self-devotion, which made up for lack of enthusiastic and unhesitating conviction; but he worked without the stimulus which this gives; and perhaps his balanced temperament prevented his being a very inspiring leader, except to those who knew him well.”

Sidgwick's scepticism has more than once taken the form of refusing to submit to a general rule which purports to render the appeal to experience superfluous. Of this character is the limitation which he imposes on the principle of *laissez faire*. Limitation we say advisedly, not abrogation, of the general principle, to which he still leaves considerable authority.

“ This conception of the single force of self-interest, creating and keeping in true economic order the vast and complex fabric of social industry, is very fascinating. . . . And I believe that the conception contains a very large element of truth ” (*Political Economy*, Bk. II., ch. ii., § 1).

So with respect to one particularly important infraction of *laissez faire*, protection of native industry, we read :—

“ I do not mean to say that the broad general argument for industrial liberty has lost its force. I have already expressed the contrary opinion, but I think that in the natural development of economic theory it has come to be recognised as merely a first approximation to the truth ” (*Political Economy*, Bk. III., ch. v., § 1).

The main consideration which turned the balance in Sidgwick's judgment, making him “ decidedly opposed ” to the policy of Protection, is thus expressed :—

“ I do not think we can reasonably expect our actual governments to be wise and strong enough to keep their protective interference within due limits ” (*Ibid.* We have not room for the corroborating context.)

It may be asked now : Does Sidgwick hold the balance fairly between general and specific evidence when the two conflict? Some prejudice may perhaps be excited by his procedure in a case which is somewhat parallel, though in *aliâ materiâ*, his investigation of spiritualistic phenomena. He may seem ready to admit shreds of evidence in defiance of common sense. The Memoir certainly shows him pursuing “ psychical research ” more persistently than might have been expected; but it also shows that he was by no means deficient in what Gibbon, with reference

to a well-attested marvel, calls a "general antidote" against credulity. Altogether, on the question, which does not admit of a precise answer, what comparative weight should be assigned to particular pieces of evidence and to experience massed in generalisations, it would be hard to show that Sidgwick deviated from the standard of reason. The refined argument that "temporary protection is in certain cases defensible in pure economic theory" (*loc. cit.*), is far removed from vulgar fallacies; a philosophical curiosity about telepathy and hypnotism does not imply belief in popular superstitions and the common ghost.

All that we learn about the personality of Sidgwick confirms our deference to his practical wisdom. A peculiar weight attaches to his judgments on the human side of economic problems. He teaches with authority that the Art of Political Economy aims at a maximum of happiness, by means in the choice of which we have often to be content with a balance of probabilities. Whenever he himself strikes the balance he thereby contributes a datum of some moment to the deliberations of his followers. Great weight accrues to the scale which preponderates in the well-balanced mind of Sidgwick.
