SCIENTIFIC EVENTS

THE EXHIBITION OF THE ROYAL PHOTOGRAPHIC SOCIETY

THE Royal Photographie Society of Great Britain is holding its sixty-seventh annual exhibition in September and October of this year. This is the most representative exhibition of photographic work in the world, and the section sent by American scientific men heretofore has sufficiently demonstrated the place held by this country in applied photography. It is very desirable that American scientific photography should be equally well represented in 1922, and, in order to enable this to be done with as little difficulty as possible, I have arranged to collect and forward American work intended for the Scientific Section.

This work should consist of prints showing the use of photography for scientific purposes and its application to spectroscopy, astronomy, radiography, biology, etc. Photographs should reach me not later than Thursday, June 15. They should be mounted but not framed.

I should be glad if any worker who is able to send photographs will communicate with me as soon as possible so that I may arrange for the receiving and entry of the exhibit.

FRENCH EXCHANGE PROFESSORS IN ENGINEERING

THE *Pennsylvania Gazette* reports that Professor Jacques Cavalier, rector of the University of Toulouse, has begun his term at the University of Pennsylvania as the first exchange professor appointed by the minister of public instruction in France in accordance with an arrangement made by the committee of American universities on exchange with France of professors of engineering and applied sci-

ence. The plans made by the committee stipulate that the French exchange professor shall spend one month at each of the following universities: Columbia, Cornell, Harvard, Johns Hopkins, Massachusetts Institute of Technology, University of Pennsylvania and Yale, and that a representative of American technical schools shall spend a year visiting and lecturing before the chief French engineering and technical schools.

Professor Cavalier is an eminent scientist and well known as an investigator in the field of metallurgical chemistry. He was formerly professor of applied chemistry at the University of Rennes, and he is now rector of the University of Toulouse. During the war he was attached to the ministry of munitions. Since his appointment to the post of rector of the University of Toulouse he has devoted much of his time to questions related to technical education.

During his stay in America he hopes to thoroughly study the organization administration and methods of instruction in our own schools and place before men interested in technical education the principles underlying scientific education in France. It is believed that this exchange of professorships will serve to develop a cordial relationship between engineering and technical schools in both countries. Professor Cavalier will lecture before the staff and graduate students of the department of chemistry on questions related to his own investigations in applied chemistry, and he will also deliver three illustrated lectures in French at Houston Hall on Wednesdays, March 1, March 8 and March 15, on "The French universities," "Student life in France," and the "Evolution and development of the French universities." Both as a savant and scholar, Professor Cavalier is well equipped to speak on the advanced studies now carried on in French universities, as well as to discuss their organization.

The committee of American universities has appointed as its representative in France this year Professor Arthur E. Kennelly, professor at Harvard and the Massachusetts Institute of Technology. Professor Kennelly has met with so much success in his mission that the number
