VIII.—Description of a new Tailed Batrachian from Corea.

By G. A. BOULENGER.

Hynobius Leechii, sp. n.

Palatine teeth forming a **V**-shaped figure, which is broader than long; the length of one of the series, from anterior to posterior angle, equals one half of the width of the tongue. Head depressed, a little longer than broad; snout short, rounded. Body thrice and two thirds the length of the head; the distance from snout to gular fold contained nearly thrice in the distance from latter to cloaca. Limbs not meeting when adpressed; fifth toe well developed. Tail nearly as long as the distance between gular fold and vent, thick, compressed, not keeled, with vertical grooves, obtusely pointed posteriorly. Skin smooth; thirteen costal grooves; a vertebral groove. Blackish brown, above speckled with pale brownish; upper surface of tail pale brownish, with a few black dots.

	millim.
Total length.....	83
From snout to cloaca	47
Head.....	10
Width of head	8.5
Fore limb.....	12
Hind limb.....	14
Tail	36

A single specimen formed part of a small collection of Batrachians made at Gensan, Corea, and presented to the Natural-History Museum by J. H. Leech, Esq. The other species are: *Rana esculenta*, var. *japonica*, *Bufo vulgaris*, and *Hyla arborea*, var. *Savignyi*.

Finding that the name *Anaides*, given by Baird in 1849 to a genus of Plethodontine newts (cf. Cat. Batr. Caud. p. 52) is preoccupied (Westwood, 1841), I propose to change it to *Autodax*.

 IX.—On the Genus *Hindia*, Duncan, and the Name of its Typical Species. By GEORGE JENNINGS HINDE, Ph.D., F.G.S.

DR. RAUFF'S* able paper on this genus, a translation of which by Mr. W. S. Dallas appeared in the September number

* "Ueber die Gattung *Hindia*, Dunc.," Sitzungsab. der Niederrh. Gesell. zu Bonn, Sitzung vom 10. Mar. 1886.
