Sonnenfinsterniss 1896 Aug. 8.

Nach einem weiteren Telegramm von Herrn E. Lindemann ist in Nowaja Semlja die Finsterniss beobachtet worden. Die Witterung war ferner günstig in Stockholm, Upsala und Leipzig; an allen drei Orten wurde der Austritt beobachtet. In Jena starker Nebel, in Pola Regen, in St. Beatenberg (Schweiz), woselbst sich zur Zeit Herr Dr. B. von Engelhardt aufhält, ganz trübe.

Kr.

Requests to Astronomers.

Mr. John Dickerman is engaged in computing the orbit of Swift's comet 1895 II, and would be exceedingly obliged for copies of any observations of it not heretofore published in the Astronomische Nachrichten, or in the Astronomical Journal. Such data may be sent to him at the Chamberlin Observatory, University Park, Colorado, U. S. A.

As the observatory is young, its library is meager, and donations of publications of other observatories are

urgently requested. Star catalogues are especially needed, and the undersigned will be glad to learn of any copies of modern catalogues which the observatory may acquire by purchase or gift. Publication No. I has already been issued, and its distribution awaits the completion of No. II, the manuscript for which is now in hand. Though University Park is within the city of Denver, it has a special post-office, so that all mail-matter should be addressed as above.

University Park, Colo., 1896 June.

Herbert A. Howe.

Mars. Herr J. Ritchie jr. telegraphirt aus Boston: »Ganges was observed doubled by Percival Lowell, Arizona, August 16.«
