

occur, where we may feel reasonably sure of success, we shall be in better shape to send insects of this character in a manner most likely to enable them to reach their destination with the least number of fatalities while in transit. It is by this continually doing something that we are some day enabled to accomplish much.

THE LINNÆAN GENUS GRYLLUS—ADDITIONS AND CORRECTIONS.

Quite recently I was kindly informed by Mr. S. H. Scudder, that in my paper on the divisions and species of the original genus *Gryllus* (CANAD. ENT., XXXIII., pp. 118-121), I had overlooked the fact that Fieber's paper had appeared in *Lotos* in 1853. With the information furnished by Mr. Scudder, I examined the work, and found that *Mecostethus* appeared in the May number, on page 99, and *Pachytylus* and *Psophus* in the June number, on pages 121 and 122, respectively. This fact further clinches the Linnæan *Locusta* on Fischer's *Stenobothrus*.

The date given for Thunberg's *Gomphocerus* is erroneous, and should be 1815, while the original spelling of Bolivar's "*Humbella*" is *Humbe*.

JAMES A. G. REHN, Philadelphia.

ERRATUM.—Page 129, line 15, for "*Ziphidium*" read *Xiphidium*.

Mailed June 3rd, 1901.
