

The KI4MZC SEQP station was a KX3 to a dipole, N1MM logger, and battery power, set up outside. The antenna was a cobra dipole at about 50 feet high and about 100 feet in length oriented approximately North-South with 450-ohm (window) transmission line that fed directly into the Kx3, using a BNC to binding post adapter. No external tuner. Battery was Bienno 20Ah Li Fe Po.
