

# **W0D SEQP Station “The Eclipse Dogs”**

**Our Antenna we used was a 135 foot All Band Doublet fed with 75 feet of 450 ohm window line. The antenna was put up in the trees to about the 50 foot level. We used a Johnson KW Matchbox for the antenna tuner.**

**The rig used was an Elecraft K3 with KPA-500 amplifier. We used 2 Honda EU2000i generators; one for the rig and one for the amp.**

**We were located at the Washington State Park, about 6 miles south of DeSoto, MO. We arranged to use a park pavilion on top of a hill. The general public was there to observe the eclipse and there were many questions about what we were doing and Ham Radio in general.**

**Operators were Mike, WB0SND and Derek, WB0TUA.**
