society
 art & design
 technology
 science
 innovation

accelerating knowledge into action

mission

physical and virtual space for interdisciplinary experimentation and innovation
 driven to accelerate knowledge into action
 open innovation methods and practices
 implementing the open innovation research infrastructure against a background of a RRI mission statement

services

knowledge design, exponential thinking,
 broker to unusual suspects and new actors
 concept, design and facilitation of
 challenge based innovation driven processes
 and application of open innovation

humanity centered design (HYCD)

according to frederico donelli (2019) - principles:
 design products that respect peoples wellbeing
 design products for people as members of the society
 design products to preserve the human side of the interaction between humans and machines

network thinking + we-culture

according to peter spiegel (2015)
 social innovation is next wave of revolution
 connectivity : decentralisation and interdependence
 in the center: we-q (we-qualities) rather than i-q
 following the concept of decentralised collaborative organization (primavera de filippi @ blackfeed 2017)

recognition

- best case example of the austrian government for open innovation
- nominated for falling walls scientific breakthrough finalist 2020

Ars Electronica Garden of ... Knowledge for Humanity
 Ars Electronica (AT) et al. (2021)

knowledge4 development

knowledge 4 development partnership

aiming to create, drive and implement the agenda knowledge 4 development and in doing so contribute to agenda 2030 and the sustainable development goals

garden of .. knowledge for humanity

framework
 ars electronica festival 2020: 11 virtual interventions and 1 face to face presentation in deep space, various of them with a participatory approach, e.g. co-design of the „museum of knowledge science“, speculative critical design with the community group „community creates mobility“, methodathon for the participatory furthered „algorithm inventarium“, open education with „exponential mindset“ etc.

results

- ongoing projects
 algorithm inventarium (AI+), PROVIDEDH
- tight collaboration with community creates mobility
- available on our k4h+ github, zenodo
