The graph displays the daily number of cases over a 12-month period. The y-axis is scaled from 0 to 100 in increments of 20. The x-axis marks the months of October 1971, January 1972, April 1972, July 1972, and October 1972. The data points, represented by blue 'x' marks, show a period of low activity (near 0 cases) from October 1971 until late November 1971. A sharp increase begins in late November, reaching a peak of about 80 cases in early January 1972. This is followed by a period of fluctuation with peaks around 60 cases in late January and early February, and another peak of about 70 cases in late March. A significant decline starts in early April, returning to the baseline of near-zero cases by mid-May 1972, where it remains until October 1972.
