PhD in Political Science, Research Head at the InterAgency Institute

INFORMATION TRANSFERRING IN THE BENEFIT OF POLICY BUILDING

ENDORSE.

THE EUROPEAN DATA CONFERENCE ON REFERENCE DATA AND SEMANTICS

Purpose and Ideas

- The purpose of this research is to show how practitioners (actors) interaction may add to semantics and interoperability.
- The main conceptual premise is based on the belief that policy building and policy effectiveness is dependent on the various forms of training and interacting.
- Training and interaction may be political assets to permit not only policy incremental enhancement, but policy compliance.
- Strategic level policies may connect to micro-policies, both through guiding institutions and ways to refill the strategic level with insights from the bottom side.
- Peace and security within the Eurozone are qualified by those concept and terms engagements, as to permit policy reflexive building accordingly.

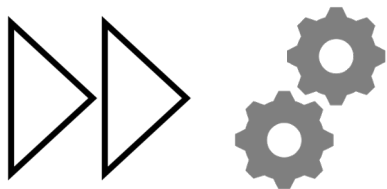

DIGITALIZATION AS INFORMATION
TRANSFERRING
(transparency and citizen´s participation)

Procedures

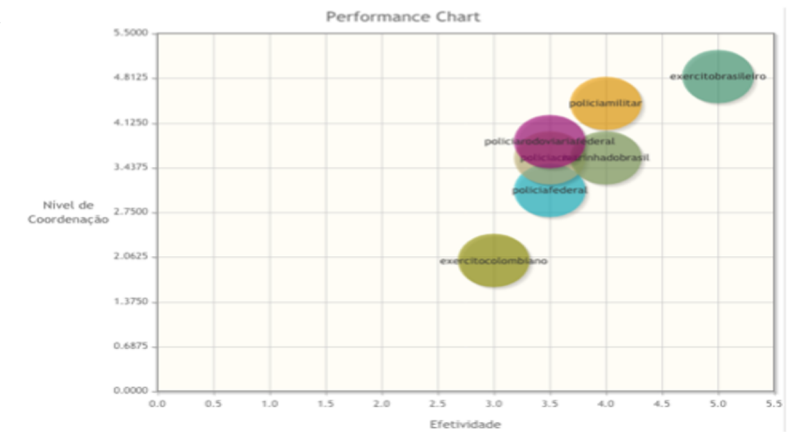

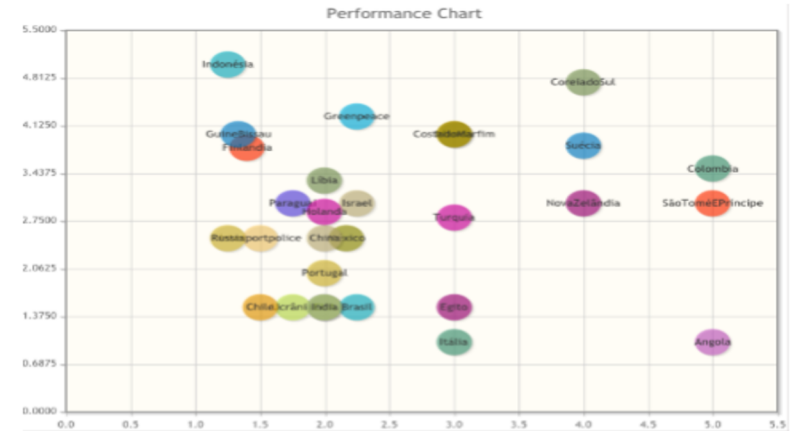

Training tools to detect good practices

The link between interoperability and semantic is about policy building in benefit of interoperability/interagency schemes, as it is dependent on the way semantic frameworks are proposed.

Agreeing on the various forms of naming tools, concepts, or behaviour, and creating ways that semantic develop in an incremental way, so it can adhere positively to complex networks.

AJAPT - Agent Joint Assessment Planning Tool

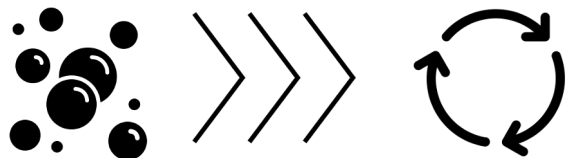

ESCO Method: crossing positive experiences

Adds from ESCO:

- # Semantic interoperability is seemed like an active part of the integration process.
- # Online consultation, and permanent portal feeder.
- # Tree pillars (skills, occupations and qualifications) to connect CONCEPTS to TERMS. Linkages in between them are important assets.
- # skills conceptualisation is also formed by social interaction, attitudes and values.

Adds to ESCO:

- #ESCO as the language for the European labor market and the education/training sector: validation is optional and dependent on the employment services.
- # skills conceptualisation is also formed by social interaction, attitudes and values but they are not connected to other social policies. APIs and the development of specific tools (like AJAPT) may permit it.
- # Metadata schema: qualifications based on variables like NUTS (NUTS2021 Eurostat). Limited crossed data.

Case: Borders and Integration Policies

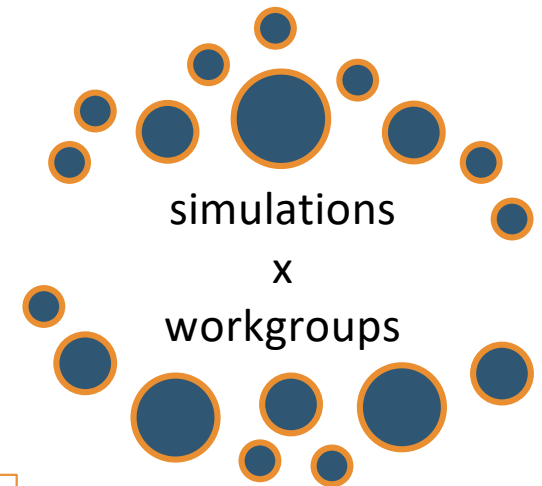

Outcomes

How it advances knowledge in the field or benefits society?

Qualifying operators to enhancing, collaborating, and building metadata promotes semantic efforts to an upper level of information, that can be used by practitioners, politicians, and agents in a favourable way for incremental policy building.

Observing practices from the micro-experiences

Network and Policy Transferring and Diffusion

Common Security and Defence Policy (CSDP) as an “integral part of the EU's comprehensive approach towards crisis management”.

Thank you!
