Product reference	Title
SST_BS_SST_L3S_NRT_OBSERVATIONS_010_013	Black Sea - High Resolution and Ultra High Resolution L3S Sea Surface Temperature
SST_BS_SST_L4_NRT_OBSERVATIONS_010_006	Black Sea High Resolution and Ultra High Resolution Sea Surface Temperature Analysis
SST_BS_SST_L4_REP_OBSERVATIONS_010_022	Black Sea - High Resolution L4 Sea Surface Temperature Reprocessed
SST_MED_SST_L3S_NRT_OBSERVATIONS_010_012	Mediterranean Sea - High Resolution and Ultra High Resolution L3S Sea Surface Temperature
SST_MED_SST_L4_NRT_OBSERVATIONS_010_004	Mediterranean Sea High Resolution and Ultra High Resolution Sea Surface Temperature Analysis
SST_MED_SST_L4_REP_OBSERVATIONS_010_021	Mediterranean Sea - High Resolution L4 Sea Surface Temperature Reprocessed

NRT: products within few hours, NRT replaced by consolidated (DT) product after few days

REP: consistent re-processed time series

L3S: daily (merged-multisensor) products; L4 analysis (no data gaps)

L3S and L4 includes two datasets:

- High Resolution (HR): $1/16^\circ$ (0.0625°) spatial resolution ;
- Ultra High Resolution (UHR): 0.01° spatial resolution

Main evolutions of CNR SST Products within CMEMS

- NRT products → ingestion of SLSTR data from Sentinel 3A/3B
S3A operational
S3B under testing
- REP products → move to ESA-CCI/C3S upstream data
planned for end of 2019

Use and impact of SLSTR3A on Mediterranean and Black Sea products

Product ID: SST_MED_SST_L3S_NRT_OBSERVATIONS_010_012,SST_MED_L4_NRT_OBSERVATIONS_010_004,
 SST_BS_SST_L3S_NRT_OBSERVATIONS_010_013, SST_BS_SST_L4_NRT_OBSERVATIONS_010_006

- SLSTR3A data are downloaded via CODA (Copernicus Online Data Access)
- **Both Single and Dual view**, L2, **quality level 5** data are used
- **Dual and Nadir View** data are **treated separately**
- Conversion from skin SST to depth SST
- **Dual View** is used as the **reference for bias adjustment** of other sensors
- Single View is given a low rank in the sensor hierarchy

Sentinel 3A SLSTR data are used operationally since 23 March 2018

Impact of SLSTR3A:

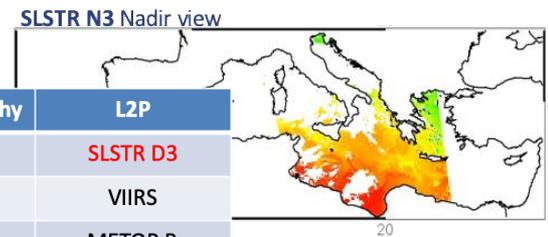

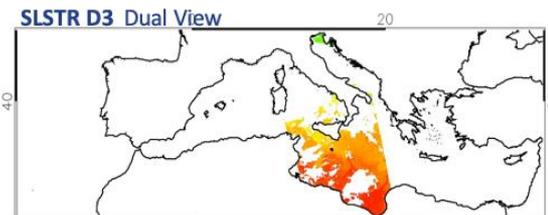

Assessments based on [comparison with fully independent in situ SST data](#)

- Validation period: July 2017 – March 2018
- Matchup Dataset: co-located (in space and time) satellite - drifter obs.

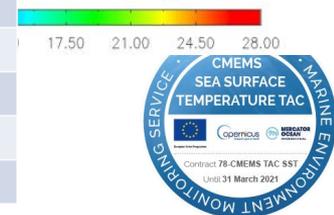

Validation showed a minor (though statistically significant) improvement

MED L3S	MBE (°C)	STDDEV (°C)	RMSE (°C)	N_MUP
Upgrade to SLSTR	-0.15 ± 0.01	0.43 ± 0.01	0.46 ± 0.01	7694
Ref. L3S	-0.24 ± 0.01	0.43 ± 0.01	0.49 ± 0.01	7579

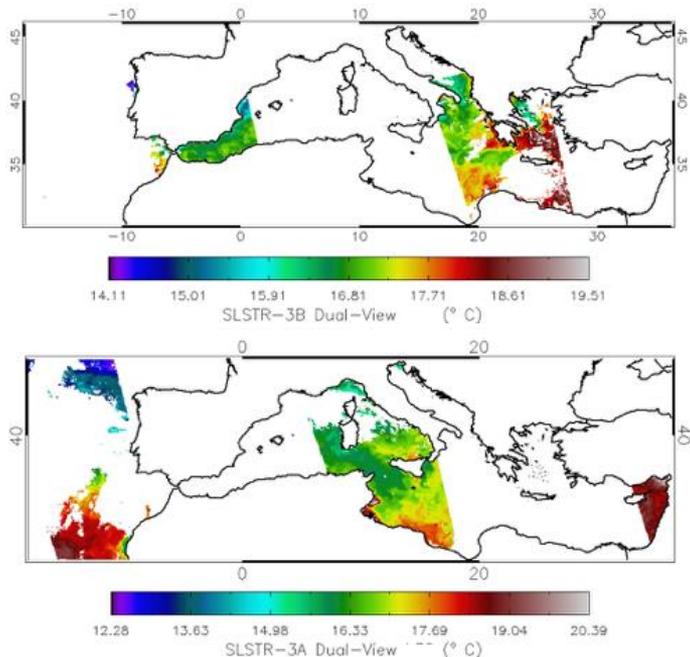

MED L4	MBE (°C)	STDDEV (°C)	RMSE (°C)	N_MUP
Upgrade to SLSTR	-0.09 ± 0.01	0.41 ± 0.01	0.42 ± 0.01	10617

7	SEVIRI

Preliminary assessment of SLSTR3B on Mediterranean and Black Sea products

- Testing is underway for Sentinel 3B SLSTR
 - Expect to introduce this operationally in November
- Very preliminary comparison between L3C built using only SLSTR-3B/-3A Dual-View (March-April) shows slightly worse RMSD
- Coverage is clearly doubled compared to only Sentinel 3A SLSTR

MED L3C	MBE (°C)	STDDEV (°C)	RMSE (°C)	N_MUP
SLSTR-3A	0.09 ± 0.02	0.29 ± 0.02	0.30 ± 0.02	892
SLSTR-3B	0.07 ± 0.03	0.34 ± 0.03	0.35 ± 0.03	630

CNR REP SST products developments already carried out in 2019

Extension of MED/BS (P3, P6) time series with interim REP data for 2018. Since the CCI data were not yet available at this stage, the products will be extended to 2018 by including bias adjusted UHR NRT L3S data as input.

CNR REP SST products developments planned before the end of 2019

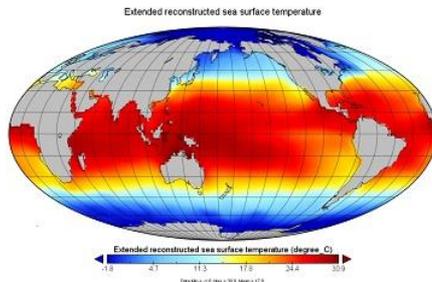

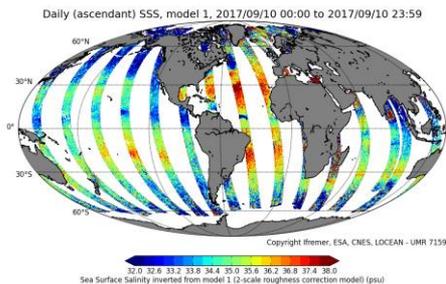

Product reference	Update Title	PU
SST_BS_SST_L4_REP_OBSERVATIONS_010_022	Reprocessing with ESA-CCI	CNR
SST_MED_SST_L4_REP_OBSERVATIONS_010_021	Reprocessing with ESA-CCI	CNR

Mediterranean/Black Sea (P3/P6) reprocessing with ESA-CCI and regular updates with C3S data. A new reprocessing will be completed, producing daily fields from 1982 to present. The reprocessing will use the SST CCI satellite products for the first part of the record and SST products from C3S for the yearly updates.

Usage of SST L4 data within multivariate SSS processing chain

MULTIOBS_GLO_PHY_NRT_015_001/ MULTIOBS_GLO_PHY_REP_015_002 :
 Global Multi-Year and Near-Real-Time Sea Surface Salinity and Density L4 dataset

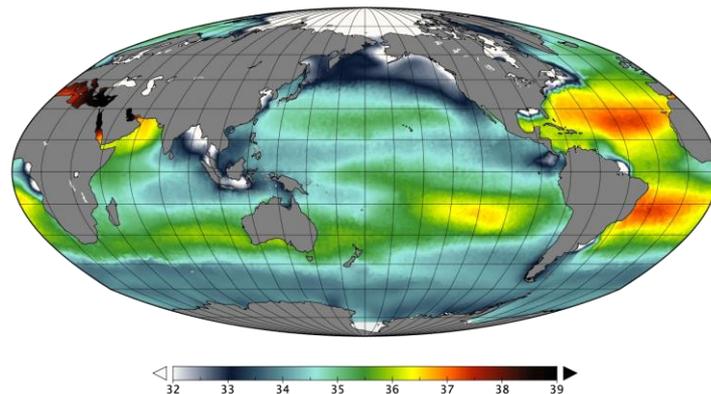

Multivariate Optimal
 Interpolation
 algorithm

The SSS-SSD optimal interpolation is based on a multidimensional (space/time/thermal) covariance model, using Reynolds L4 in input
 Plan to move to OSTIA REP L4 based on ESA-CCI/C3S in future updates

sea surface salinity (2019-03-29)

Input data stream:

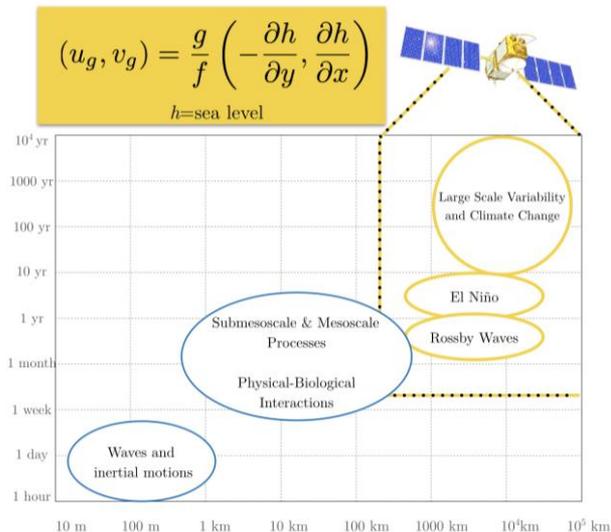

Quality controlled in situ SSS/SST used in **ARMOR3D**
 SMOS – L2Q daily from **CATDS**

Background:

output of first round of OI starting from in situ input data
 and monthly climatology built from sss-ssd-rep (previous version)

Consistent NRT/REP data online since April 2019

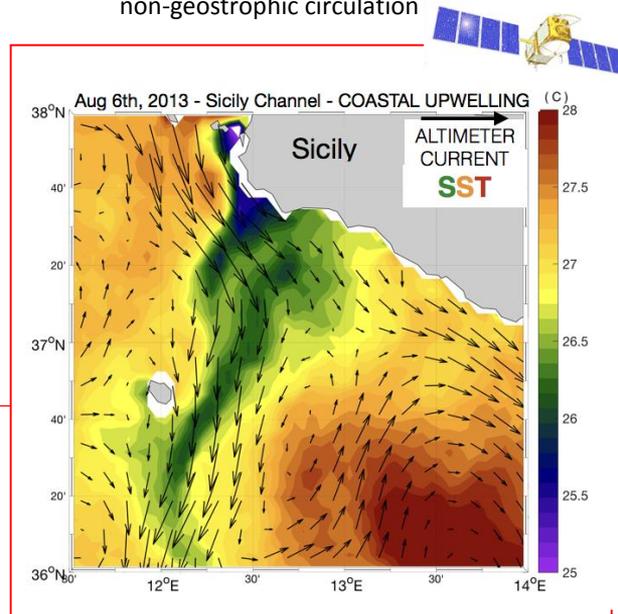

Optimization of the altimeter-derived currents: regional application, MED SEA - context

The altimeter system allows to monitor the large-scale geostrophic component of the sea-surface currents:
 Incomplete description of the Mediterranean Sea surface circulation
 Rossby deformation radius ~10-20 km

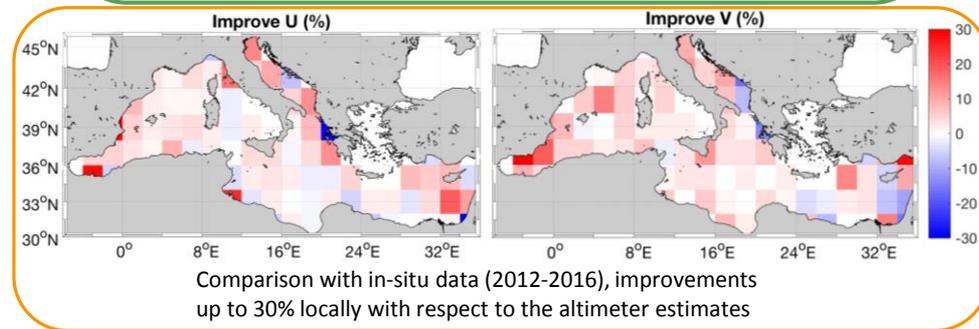

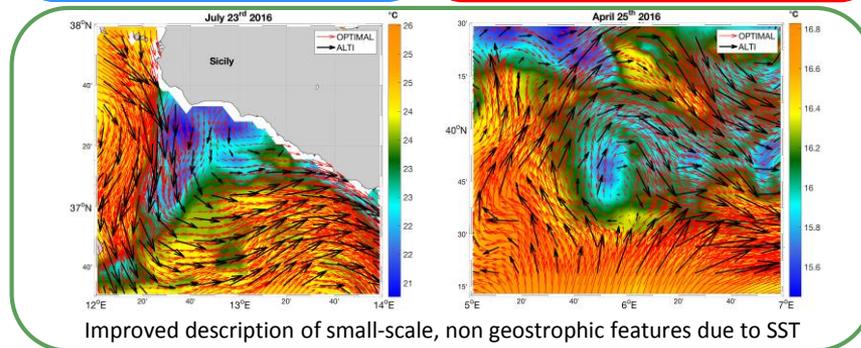

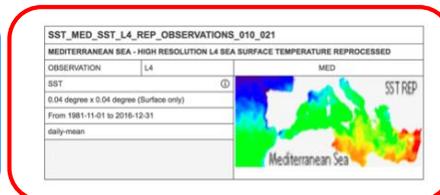

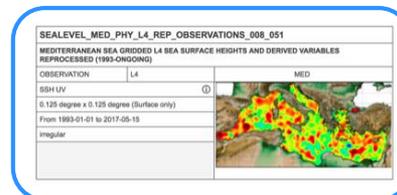

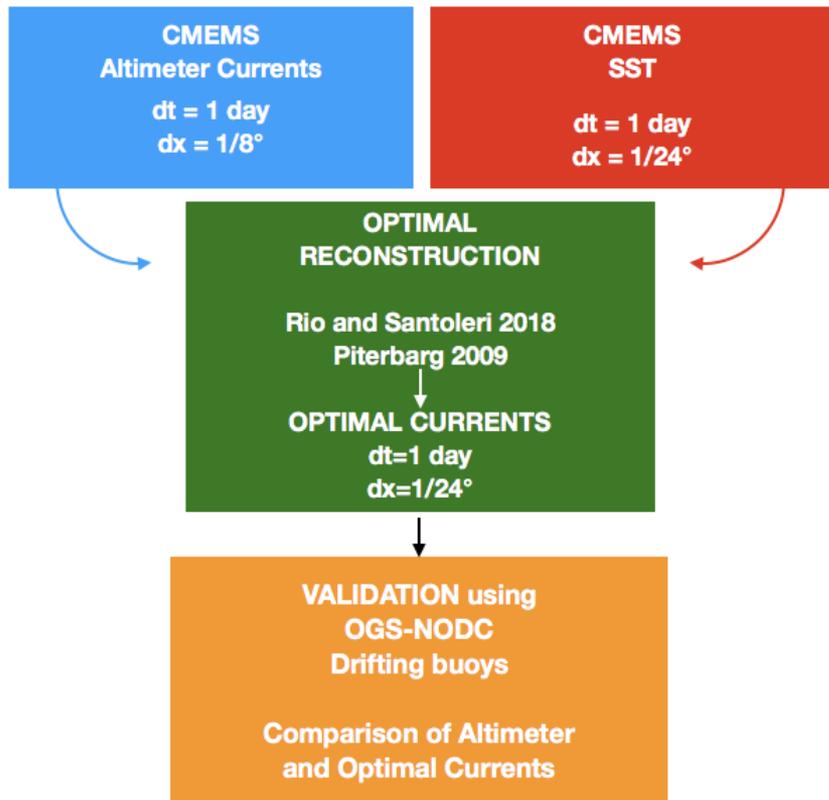

Example of the Altimeter system in non-geostrophic circulation

New methodologies have to be explored to go beyond the altimeter system limitations
We rely on the patterns of a high-resolution surface tracer: Sea-Surface Temperature

CNR Coordinates the C3S_511 Service on the Scientific Quality Assessment and Report for ECVs

In partnership with:

DLR ETHZ LMU UCL UVB CLU-SRL CSIC IOP-PAN ENEA

OBJECTIVE: Address the quality assessment of observed ECV products in Climate Data Records for C3S and compare with existing independent CDRs.

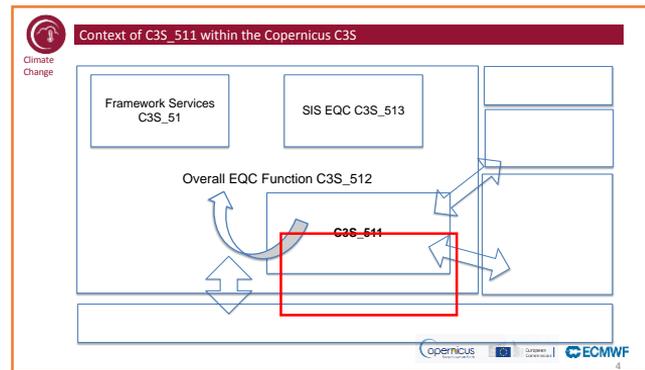

- CDS dataset are singularly assessed by providers with different approaches, methods.
- Datasets have a different degree of maturity

C3S_511 reviews independently and provides a uniform assessment of all ECVs (Atmosphere – Ocean – Land)

What they can be used for ...

Which climate applications may benefit of such data

Under the form of synthetic and appealing reports on quality and applicability

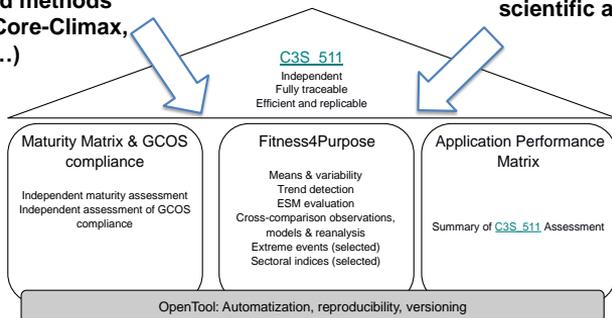

SST evaluation is part of the game
 C3S_511 evaluates all the SST dataset available on the CDS (SST-CCI, C3S, ERA5, ORA5,..)

C3S_511 QA framework: How we build the EQC functions

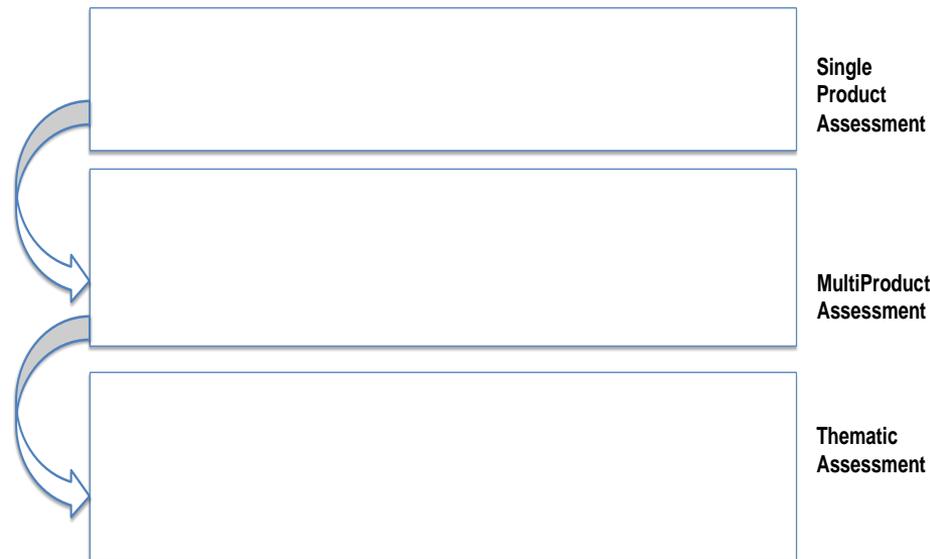

Bringing Climate Science to Users

Implement and adapt EU-
framework Quality
functions and methods
(QA4ECVs, Core-Climax,
GAIA-CLIM ...)

Apply state-of-the-art
scientific analysis

Develop functions for an open-
source software package

First step focus on:

- Definition of the framework
- single product assessment (V1) for selected variables and datasets

Title

Sea level daily gridded data for the Black Sea from 1993 to present

Sea level anomaly is the height of water over the mean sea surface in a given time and region. Up-to-date altimeter standards are used to estimate the sea level anomalies with a mapping algorithm dedi...

“Single Product Report on ECV – Sea Surface Temperature from ESA-CCI of the Climate Data Store”

Issued by: CNR / Andrea Pisano, Francesca E. Leonelli, Chunxue Yang, Salvatore Marullo, Rosalia Santoleri, Bruno Buongiorno Nardelli

Date: 26/10/2018

Ref: C3S_D511.5.1a_201810_SP-QB release for SST ECV

products_ESACCI_SST_v1.0

Official reference number service contract: 2017/C3S_511_CNR/SC1

General Description

The ESA-CCI Sea Surface Temperature (SST) Level 4 (L4) product (version 1) provides daily global spatially complete SST fields at 0.05° spatial resolution, covering the period from 1st September 1991 to 31st December 2010. The ESA-CCI SST L4 product is built by interpolating reprocessed satellite data from (A)ATSR and AVHRR sensors with the OSTIA (Operational SST and Sea Ice Analysis) system [1] and are designed to represent the daily average SST at the nominal depth of 20 cm. The main characteristics of this product are its homogeneity and stability through the time series, its independence from in situ data and uncertainty estimates associated to each SST value, making this product suitable for climate applications [2, 7]. Detailed information on the ESA-CCI SST L4 product can be found in the algorithm theoretical basis document [3], product user guide and specification document [4, 5] and validation and climate assessment results [6, 7] as well as file format specification [8].

Temporal Resolution

Daily

Spatial Coverage

Global

Temporal Coverage

09/1991-12/2010

Variables

Sea Surface Temperature [K]

Format

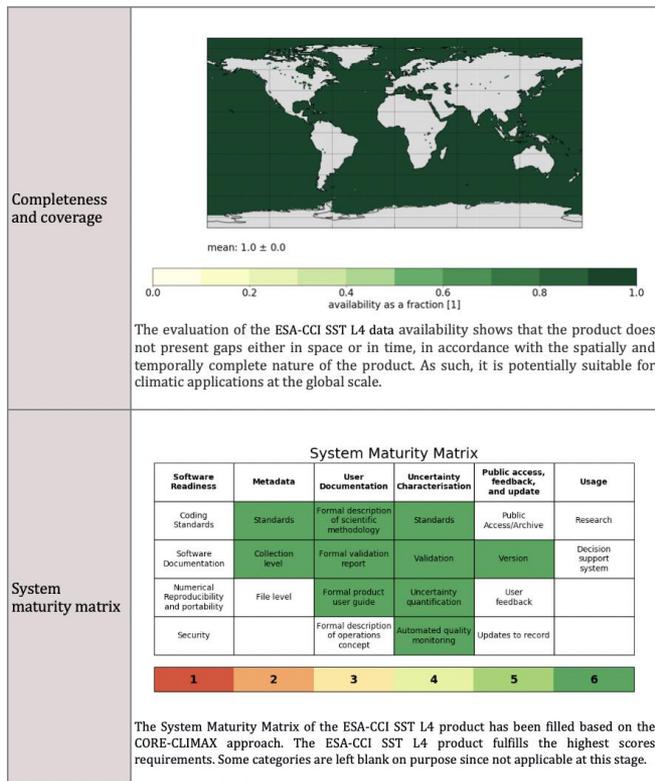

NetCDF – CF Convention compliant

Comments

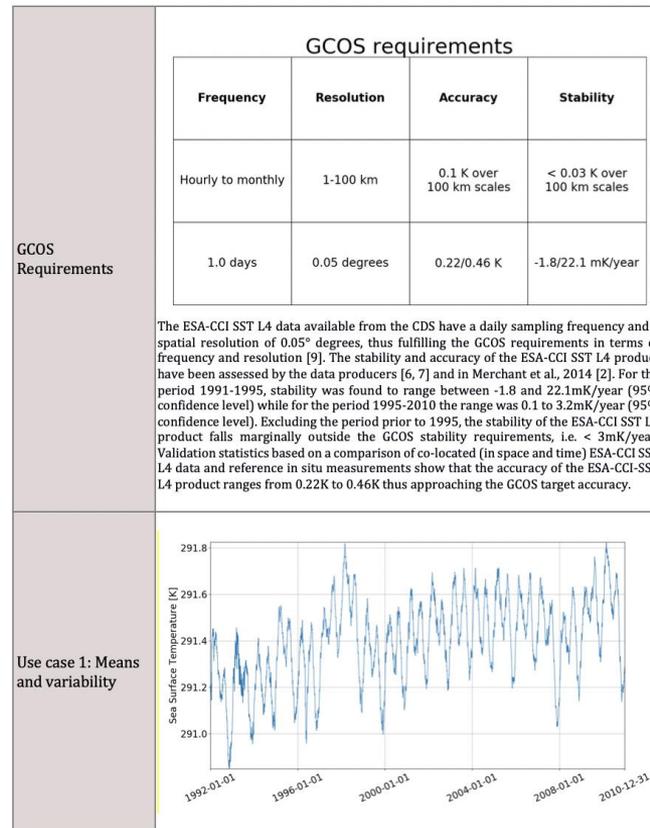

The evaluation of the ESA-CCI SST L4 product has been carried out using the ESMValTool (version 1) software, which first requires data to be in a CMOR (Climate Model Output Rewriter) format. Since the ESA-CCI SST L4 data in the CDS are not fully CMOR compliant, we had to carry out the cmorization of data using NCO and CDO operators. Then, since ESMValTool v.1 handles only a limited amount of memory volume, we had to downgrade the input CMOR data from 0.05° to 1° spatial resolution while maintaining the original daily temporal resolution. Finally, since ESMValTool handles only complete years, the year 1991 has been excluded from the evaluation.

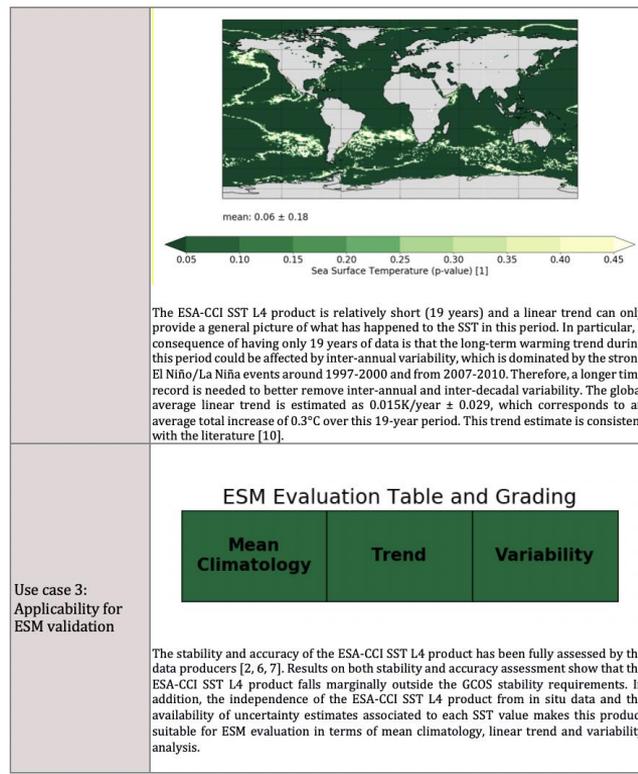

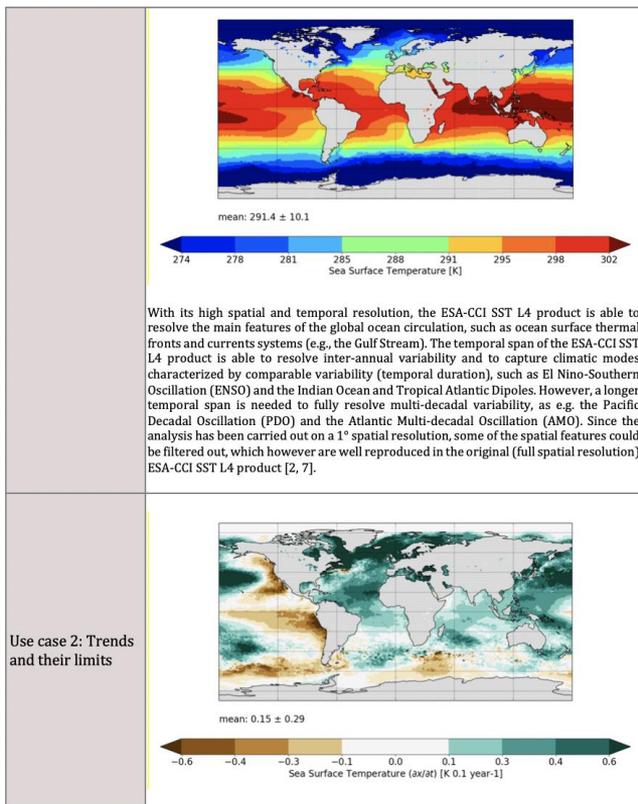

2. Executive summary

2.1 Basic evaluation

2.2 Fitness for Purpose

First Version of the SST report. New version next year

SPQB already DELIVERED to ECMWF and will be available soon to the users:

Atmospheric ECVs

Temperature, dataset: ERA5

Wind, dataset: ERA5

Humidity, dataset: ERA5

Ozone, dataset: ESA-CCI, 4 different products:

1. GOME-type Total Ozone ECV– column
2. OZONE LMZ-MERGED - profiles
3. OMI-AURA Profiles
4. IASI-B Tropospheric column

Methane, dataset:

Oceanic ECVs

SST, datasets: ERA5 & ESA-CCI

Sea level, dataset: C3S (altimeter), ORA5

Surface current: ORA5

Surface fluxes: ERA5

surface salinity: ORA5

Land ECVs

SoilMoisture: ERA5

albedo:

Glaciers: Randolph Glacier Inventory, CGLS

Surface ECVs

Surface temperature: ERA5

Wind: ERA5
