# Different Types of Multiple Style Magic Squares of Order 32 

Inder J. Taneja

#### Abstract

Author worked on different kinds of magic squares. These include block-wise, bordered, blockbordered and block-wise bordered magic squares. The block-wise bordered magic squares are very much similar to bordered magic squares, where the numbers are replaced by blocks of magic squares. For details refer author's work. It brings multiples blocks of orders 4, 6, 8, 10, 12 and 14. This work brings different types of magic squares of order 32. It is a combination of block-wise, bordered, block-bordered and block-wise bordered magic squares. For previous works from orders 10 to $26,28,30,36$ and 40 refer author's work [32, 33, 34, 35, 36, 37]. It is revised and extended version of author's previous work with corrections. The previous work was only with 324 magic squares of order 32. Total there are 1309 different types of magic squares of order 32 given in this work. This paper is with few examples. The completed examples with pdf files are available at author's web-sites [3, 4].

## 1 Introduction

The magic sums of order $n$ of consecutive numbers from 1 to $n^{2}$ is given by

$$
\begin{equation*}
S_{n \times n}:=\frac{n \times\left(1+n^{2}\right)}{2}, n \geq 3 . \tag{1}
\end{equation*}
$$

This formula is applied to all order magic squares. Based on this formula we can easily check the possibilities of blocks of equal or unequal sums to construct block-wise magic squares. On the other side there are bordered magic squares. It is always possible to construct any order bordered magic squares, but the block-wise magic squares are not possible to construct always, for examples, magic squares of orders 10, 11, $13,14,17,19,22,23,26$, etc. These are the cases of orders known by $\mathbf{p}$ and $\mathbf{2 p}$, where $\mathbf{p}$ is a prime number. These types of orders are constructed as block-bordered magic squares. There are four different kinds of magic squares. These four types are block-wise, bordered,block-bordered and block-wise bordered magic squares. Below are few details of author's work on these four types:

1. Block-Wise: Below are two examples of block-wise magic squares of order 12 .

3. Block-Bordered: The block-bordered magic squares are magic squares where we are unable to work with block-wise magic squares. These magic squares are of orders $\mathbf{p}$ or $\mathbf{2 p}$, where $\mathbf{p}$ is a prime number. For example, magic squares of orders $10,11,13,14$, etc. In this case we write only external border and the inner parts are constructed as blocks. See below two examples of orders 10 and 14:

5. Block-Wise Bordered: The block-wise bordered magic squares are the extension of bordered magic squares. In case of bordered magic squares, the borders are formed by numbers, while in case of block-wise bordered magic squares the external borders are formed by blocks. This means, when we remove external border, we are always left with magic squares with sequential entries. The same happens with block-wise bordered magic squares. In this case, the blocks are multiples of orders $4,6,8$, etc. Sometimes, we call them as multiple blocks magic squares. See below the example of order 20 :

The author worked in this direction for the multiple blocks magic squares of multiples of orders 4, 6, $8,10,12$ and 14. For more details refer author's work [26, 27, 28, 29, 30, 31].

This work is a combination of above five items resulting in different types of magic squares of order 36. There are total 1949 magic squares of order 36. For previous works from orders 10 to 36 refer author's recent works [32, 33, 34, 35, 36, 37]. The table below give numbers of magic squares for the orders 10 to 40 .

| Order of Magic Square | Number of Magic Squares |

| Order 40 | $\mathbf{3 5 5 7}$ |

This work is a combination of above five items resulting in different types of magic squares of order 32 . There are total 1309 magic squares of order 32. Due to high quantity, only few examples are written. The other examples can be seen in two pdf files at author's web-sites [3, 4].

## 2 Magic Squares of Order 32

According to Equation (1), the magic sum of order 32 is given by

$$
S_{32 \times 32}:=\frac{32 \times\left(1+32^{2}\right)}{2}=16400 .
$$

We can write, $32:=2^{5}$. This gives the possibilities of blocks of order 4 . Below are few different ways of writing magic squares of order 32. It includes block-wise, bordered, block-bordered and mix-types. Total there are 324 examples, but due to space, only few examples are below. The other examples can be seen in an excel file attached with the work.
