**and the UK**

# FAIR-IMPACT overall objective

## WHAT:

to realise a FAIR EOSC by supporting the implementation of FAIR-enabling practices across scientific communities and research outputs at a European, national, and institutional level;

## HOW:

- identifying current and emerging components for enabling FAIR (practices, policies, tools & technical specifications);
- translating viable solutions, guidelines and frameworks that have been developed for one domain or research output and supporting their application in others;
- taking the next step in implementation by defining the support, governance, and coordination mechanisms required to ensure the continuous function of FAIR-

# Overview of session

- The Danish strategy - process and timeline, John Renner Hansen, Professor, Niels Bohr Institute, UCPH, Chairperson for the Danish national FAIR strategy
- Strategic Motivation - the Danish Ministry of Higher Education and Science, Bjarke Stolze Kaspersen, Special Consultant, The Ministry Higher Education and Science
- The 17 action areas: what, why and how, Anne Sofie Fink Kjølgaard, of DeiC's data management team
- Status and hopes for the future, Professor John Renner Hansen, Niels Bohr Institute, UCPH, Chairperson for the Danish national FAIR strategy
- Discussion and questions, All
- Wrap up, Suzanne Dumouchel, Task lead in work package two, FAIR Impact

## Strategi for nationalt samarbejde om digital forskningsinfrastruktur

Anbefalinger fra strategigruppen

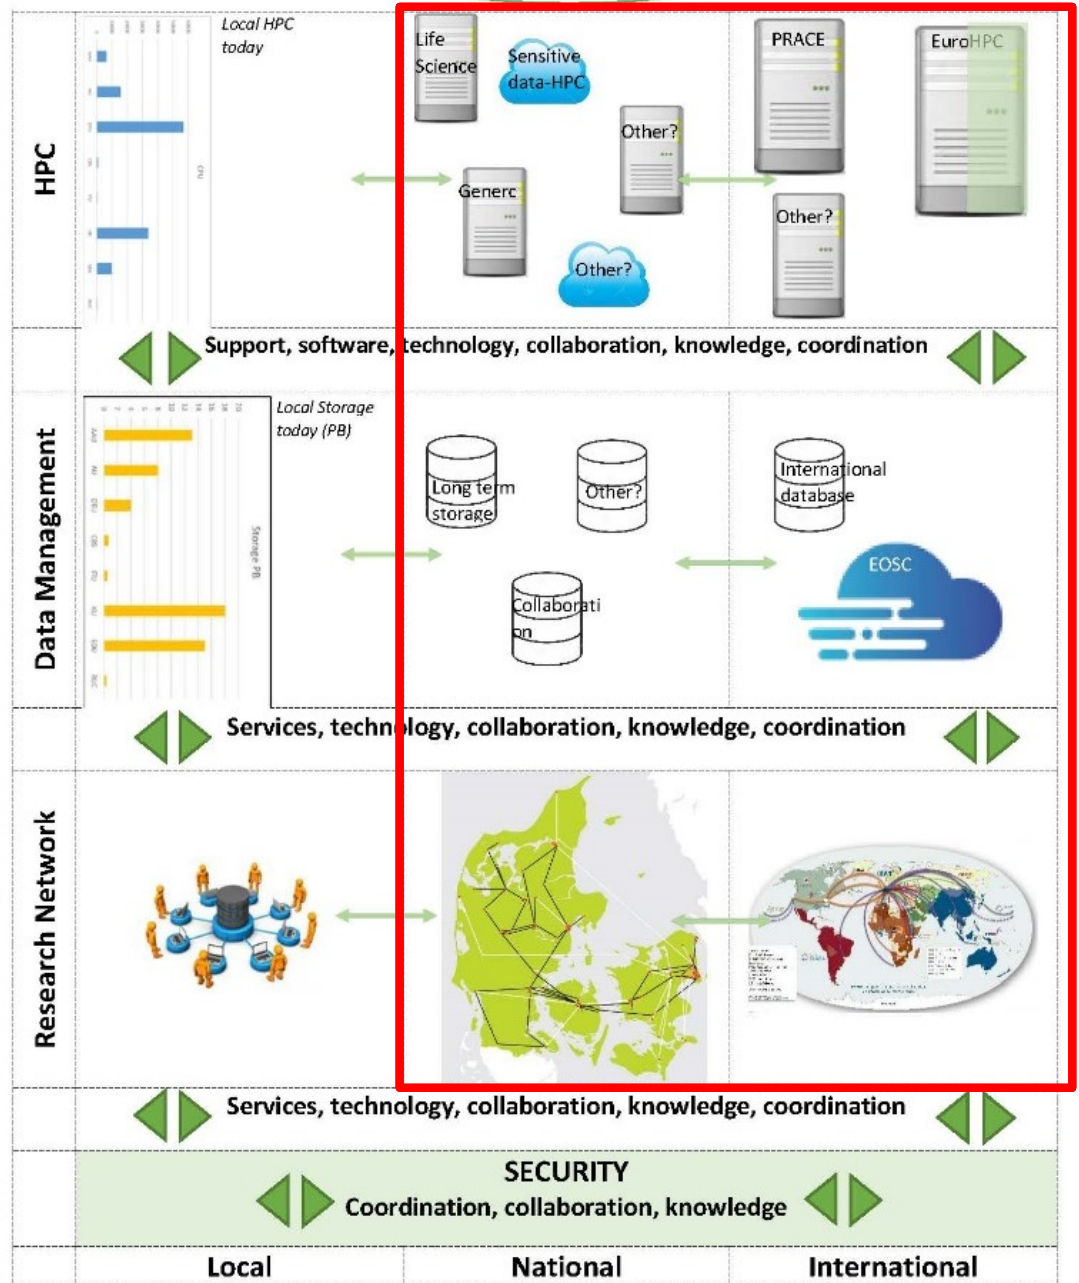

December 2018

Uddannelses- og Forskningsministeriet  
Styrelsen for Forskning og Uddannelse

**NEED?** **ARTS** **BUSINESS** **HEALTH** **TECHNOLOGY** **SCIENCE**  
 + OTHER COMMON NEEDS

*Article 10***Research data**

1. Member States shall support the availability of research data by adopting national policies and relevant actions aiming at making publicly funded research data openly available ('open access policies'), following the principle of 'open by default' and compatible with the FAIR principles. In that context, concerns relating to intellectual property rights, personal data protection and confidentiality, security and legitimate commercial interests, shall be taken into account in accordance with the principle of 'as open as possible, as closed as necessary'. Those open access policies shall be addressed to research performing organisations and research funding organisations.
2. Without prejudice to point (c) of Article 1(2), research data shall be re-usable for commercial or non-commercial purposes in accordance with Chapters III and IV, insofar as they are publicly funded and researchers, research performing organisations or research funding organisations have already made them publicly available through an institutional or subject-based repository. In that context, legitimate commercial interests, knowledge transfer activities and pre-existing intellectual property rights shall be taken into account.

## Strategi samarbejde forskning

Anbefalinger fra

December 2018

DeiC har her haft en central rolle i forhold til koordinere politikker og principper på data management-området. DeiC og Danmarks Elektroniske Fag- og Forskningsbibliotek formulerede i 2014 i fællesskab en national Data Management Strategi for at fremme og koordinere arbejdet på data management-området. Der blev samtidig oprettet et nationalt Data Management Forum, hvis formål er at være i dialog med de aktører, der understøtter forskernes data management-arbejde. De nationale midler til data management-området fra DeiC og Danmarks Elektroniske Fag- og Forskningsbibliotek udløber ved udgangen af 2018.

Desuden er der under Rigsarkivet et særligt initiativ kaldet Rigsarkivet Sundhed, som er etableret med henblik på at sikre indsamling, bevaring og formidling af forskningsdata inden for sundhedsområdet.

På det europæiske niveau har Europa-Kommissionen har taget initiativ til etableringen af European Open Science Cloud, hvor ambitionen er at tilvejebringe et åbent og sikkert virtuelt miljø for Europas forskere og andre til at lagre, finde, tilgå og genbruge data efter de såkaldte FAIR-principper. Europa-Kommissionen har foreløbigt øremærket omkring 1,4 milliarder kroner til formålet. European Open Science Cloud stiller store krav til, hvordan data beskrives og lagres, og forudsætter en væsentlig grad af koordinering både på nationalt og europæisk plan. Der stilles desuden i dag krav om, at forskning finansieres via det nuværende rammeprogram for forskning og innovation, Horizon 2020, som standard skal stille forskningsdata til rådighed for genbrug af andre forskere. Kravet forventes videreført i det kommende rammeprogram, Horizon Europe.

### Det nationale samarbejde skal

#### Bidrage til en national strategi baseret på FAIR-principperne

Der er pt. ingen FAIR-politik i Danmark, og set i lyset heraf fremstår de lokale danske anstrengelser som relativt ukoordinerede. Det er ligeledes indtrykket, at universiteterne og øvrige relevante aktører har meget forskellige udgangspunkter og modenhed i forhold data management generelt og i særdeleshed i forhold til FAIR-principperne. En national, koordinerende strategi vil både understøtte det danske kodeks for integritet i forskningen fra 2014 og vil sætte samlet retning på FAIR i Danmark. Det nye nationale samarbejde skal have en væsentlig rolle i dette arbejde, i et tæt samarbejde med en bred skare af interessenter såsom, Uddannelses- og Forskningsministeriet, universiteterne, sektorforskningsinstitutioner, bevaringsinstitutioner, Danmarks Elektroniske Fag- og Forskningsbibliotek, offentlige og private fonde og andre ministerier (for eksempel Erhvervsministeriet og Sundheds- og Ældreministeriet).

#### Styrke lokal og national lagringskapacitet

Behovsanalysen udtrykker et klart behov for øget lagringskapacitet, samt styrket koordinering, herunder behov for bedre mulighed for at arbejde og dele data på tværs af datalagre nationalt og internationalt. Hvorvidt data lagres lokalt eller nationalt er mindre vigtigt. Det vigtigste er, at data lagres i en koordineret og sammenhængende løsning, hvor data kan tilgås på tværs af organisatoriske og tekniske løsninger. Det foreslås herunder, at der indgås dialog med private kommercielle datacentre i Danmark med henblik på afdækning af synergimuligheder.

The national cooperation (new DeiC) must contribute to a national strategy based on the FAIR principles.

A national, coordinating strategy will both support the Danish Code of Integrity in research from 2014 and will set overall direction for FAIR in Denmark. The new national collaboration must have a significant role in this work, in close collaboration with a wide range of stakeholders such as the Ministry of Education and Research, universities, sector research institutions, conservation institutions, Denmark's Electronic and Research Library, public and private foundations and other ministries (for example The Ministry of Business and the Ministry of Health and the Elderly).

DeiC was formally asked i 2020 to lead the process towards a Danish strategy for FAIR data management.

The strategy is considered the Danish policy with respect to article 10

# The national strategy for data management based on the FAIR principles

## Contents

Preface .....	2
Introduction .....	1
1.1 Purpose and vision .....	1
1.2 Background .....	2
1.3 Scope .....	3
1.4 The value of open and FAIR data .....	4
1.5 Target group and structure .....	5
2 Principles for a data management practice that supports FAIR .....	6
2.1 Data management must support the FAIR principles and opportunities for data sharing and re-use. ....	6
2.2 The relevance and weighting of the individual FAIR principles vary between research areas and must be defined within these .....	6
2.3 It must be possible to preserve all types of research output and file formats of relevance to the research in the short term and the long term .....	6
2.4 Data management is a continuous process throughout the course of the research project .....	7
2.5 Relevant technical infrastructure and tools must be offered to all researchers, regardless of academic, professional, and institutional affiliation .....	7
2.6 The necessary help and knowledge resources must be accessible regardless of academic, professional, and institutional affiliation .....	7
3 Actions for the establishment of a data management practice that supports the FAIR principles .....	8
3.1 FAIR data management is a change of practice in many academic fields .....	8
3.2 Expert groups are supported in defining their own implementation of FAIR principles .....	9
3.3 Supporting preservation of research data in both the short term and the long term .....	10
3.4 Support research requirements for documentation throughout the research process .....	12
3.5 Establishment of technical infrastructure that supports data management and accessibility of FAIR data ..	13
3.6 Establishing a knowledge infrastructure that provides help and knowledge resources for data management and FAIR .....	14
4 Funding .....	16
4.1 Principles for distribution of expenses on data management and physical data repositories in connection with externally funded research projects .....	16
4.1.1 Research funding .....	16
4.1.2 The institutions' obligations .....	16
4.1.3 Funding of and responsibility for establishment of the basic e-Infrastructure .....	16
4.1.4 Expenses for Data Management and physical data repositories .....	17
4.2 Principles for establishment of cost level and allocation in one of the two categories .....	20
4.2.1 The research-funding foundations' requirements for handling of research data .....	20

- > The strategy was accepted by the Ministry for Higher Education and Research October 2021. It contains 3 main themes:
  - Principles for data management that supports FAIR
  - Efforts to establish a data management practice that supports the FAIR principles
  - Financing FAIR activities
  
- > The Agency (UFS) established a reference group
  - Term of reference defines 13 + 1 focus areas to be addressed by working groups.

**Next presentation:**

Strategic Motivation - the Danish Ministry of Higher Education and Science,

**Bjarke Stolze Kaspersen**, Special Consultant, The Ministry of Higher Education and Science

# Strategic motivation and focus areas

**Bjarke Stoltze Kaspersen – Special Advisor, PhD**

Danish Agency for Higher Education and Science

# Outline

- Background:
  - Open Data Directive
  - A national strategic plan
- The EOSC link
- A variety of cases
  - The Danish participation in international research infrastructures
  - Danish National Partnership for Health data

# The national Danish FAIR strategy

- Danish implementation of the Open Data Directive. A national policy for FAIR\* data management.
- The national strategy was launched in 2021.
- Important aspect of motivation is a growing awareness of the potential benefits of FAIR data management for research and society:  
*Examples:  
Healthcare and Life science, green transition, research infrastructures etc.*

\***F**indable, **A**ccessible, **I**nteroperable and **R**eusable

# Reference Committee and working groups

- A key element: A national reference committee and a number of working groups.
- The ministry and the reference committee are not responsible for the implementation of the strategy.
- The reference committee coordinates implementation in order to support a common national approach to FAIR data management across Danish universities and funding organizations.

# European Open Science Cloud

- The Danish FAIR data management strategy and the link to the EOSC
- EOSC post 2027
  - Governance models
  - Funding
- Enabling a 'web of FAIR data and service' for science.
- Enabling Open Science policies and the uptake of Open Science practices.

# FAIR data policies and RI's

- **Integration of the Danish strategy on FAIR data management across policy areas – for example membership of European research infrastructures**
- **EU research infrastructures and the development of the EOSC**
  - High level EU Presidency conference (Sweden 2023)

# Danish joint goals across research facilities

# National Danish Partnership for Health Data

- **A national partnership with representatives from Danish ministries, industry, research institutions etc.**
- **FAIR data management is at the core of fulfilling the potential of research, innovation, development of personal medicine etc.**

# The FAIR Strategy: Status and challenges

- **From the ministry's point of view:**
  - Significant progress across Danish universities
  - A number of "use cases" support the concrete implementation of the strategy
  - Ongoing close dialogue with university management
  - Important to address the timeline of the implementation of the strategy at the national level

**Thank you!**

# Supporting FAIR adoption at the national level: Denmark

National Strategy for Data Management based on the FAIR Principles - *Working groups and action areas: What, why & how?*

Anne Sofie Fink, Head of DeiC Data Management  
11th of October, 2023

# The reference committee and the six working groups (2023-24)

The **reference committee** consists of university management from all 8 Danish universities, management from research funding agencies and management from the Danish Ministry of Education and Science.

The **working groups** consist of researchers, data managers, IT developers as well as research support staff from all the universities and research performing and supporting organisations.

The groups consist of 8-10 individuals.

- Working group A: *Policies, tools and research support for FAIR data management*
- Working group B: *Establishing FAIR infrastructure and longterm preservation*
- Working group C: *FAIR financial plan*
- Working group D: *Plan for increasing FAIR competencies and knowledge*
- Working group E: *Security aspects for cooperation on FAIR data*
- Working group F: *Value of data*

# Action areas for working group A: 'Policies, tools and research support for FAIR data management'

1. How do the **different academic disciplines** work **with implementation of the FAIR principle** in **research practice**? For example, in their subject-specific workflows, tools, etc., possibly with inspiration from/in collaboration with international research environments?
2. What **policies** as well as **motivating and supporting efforts** exist to **support access to and re-use of research data**, including the use of **Persistent Identifiers (PID)** for digital research objects (data, software, instruments, publications, etc.)?
3. Describe **best practices** for data governance and **policies/guidelines** for **maintaining overall responsibility for data** even after researchers have left the institution and/or project funding has ended.

# Action areas for working group B: 'Establishing FAIR infrastructure and longterm preservation'

4. What **infrastructure** is available for **long-term preservation (10+ years)** for research data of all kinds at the **national level**, and how is coherence and cooperation ensured for longterm preservation, between the research institutions, DeiC and the Danish National Archives?
5. How can **services for data management plans** continue to be developed nationally and internationally, made machine-readable and used in connection with the notification of research data to the Danish National Archives?
6. How do the research institutions work with **security infrastructure** (Authentication, Authorization and Accounting Infrastructure, AAAI) specifically and especially for sensitive data, with the perspective that this can be **made FAIR, too**.

## Action areas for working group C: 'FAIR financial plan'

7. EU programs (for instance Horizon Europe) require grant recipients to **develop data management plans in connection with applications**. To what extent can national research foundations benefit from following this practice?
8. Can research data that forms the basis of published research **results be required to be made available** according to the FAIR principles, after the end of the project with at least metadata and a Persistent Identifier (PID), even when the data is not openly available?
9. Which **expenses for data management can be included in budgets?**

# Action areas for working group D: ‘Plan for increasing FAIR competencies and knowledge’

10. What **competence profiles** have the research institutions set up for the **Data Stewardship research support function** for researchers? How have the research institutions **built the Data Stewardship research support function for researchers**?
11. To what extent is there interest in developing and offering the **research support function collaboratively at the national level**? For instance under a central or decentralized **national competence centre**.
12. Is there interest at the research institutions in **national coordination of FAIR research data management courses** (not research support)? Could a possible national collaboration include agreements on division of labour, specialisation, and a collaborative national offer of educational courses – for instance in the form of a competence center under the auspices of DeIC? Courses would encompass a range of academic levels, including bachelor's to continuing education for academic staff.
13. How are **incentive structures or merit recognition** currently used, nationally or internationally for FAIR data management practices at the research institutions?

## Action areas for working group E: 'Security aspects for cooperation on FAIR data'

14. What **requirements** must be made for **security** in connection with the **storage and sharing of data**?
15. In light of research groups' needs to be able to **work nationally and internationally with sensitive data**, which requires strong and flexible governance, which national and international solutions/services can support this need?
16. Can a better understanding of the **spectrum of data sensitivity** be provided? This means not only sensitive personal data, but also agreements, dual use pre-print, IPR, etc., including the researchers' own criteria for how the sensitivity of their data can be understood

## Action areas for working group F: 'Value of Data'

17. What **criteria for data value (curation) and economic models** do local, national and international data storage services use to assess **data preservation rationale, economics and sustainability?**

# Addressing the action areas: *what, why & how*

- *The action areas address the current status of FAIR data management in Denmark*
- *They have been chosen with regards to what we already know about FAIR in Denmark (report from 2022)*
- *Implementation of FAIR research data management in Denmark is not widespread (yet), and the strategy is a way to assess how far universities and research foundations have come, while or before actual implementation of FAIR research data management happens..*

## Report from working group A:

### *'Policies, tools and research support for FAIR data management'*

**Goal:** Build a catalog with examples of data management plans (DMPs), as well as best practices for describing metadata. Good, concrete examples - "use cases" - are collected from at least two different professional groups ...

#### **Use Case:**

Billings urban Drainage data <https://zenodo.org/record/7433401#.Y5nJnC0623U>

RustWatch <https://zenodo.org/record/7437351#.Y5nJ9i0623U>

Research Infrastructure AnaEE Denmark <https://zenodo.org/record/7437335#.Y5nKMC0623U>

FAIR in Register Based Research <https://zenodo.org/record/7437322#.Y5nKsS0623U>

**Goal:** Establish a national Data Stewardship Group where the cooperation aims at defining particularly high Data Stewardship level within generic DS competence, as well as creating an organization that can lift projects and initiatives for data stewards nationally.

**Recommendation:** Need for a national collaboration with a mandate to create projects that support a common understanding/anchoring: competence development, FAIR workflows, Common governance, Data steward organization, RDM/FAIR support, incentive etc.

## All universities have a data management policy (From WG-B)

They include the following elements:

- > Refers to the "Danish Code of Conduct for Research Integrity" and has FAIR as the central concept
- > Emphasizes that data should be made publicly available, unless it conflicts with legislation, ethical considerations, contractual conditions and the like.
- > Emphasizes that data must be stored securely and responsibly.
- > Determines the main responsibility for the infrastructure for storage at the institutions, while the responsibility for knowing about the infrastructure and using it lies with the management of the individual faculty/department/centre/department
- > Data must be stored for a minimum of 5 years or in accordance with subject-specific traditions and best practice.

## WG-B: *'Establishing FAIR infrastructure and longterm preservation'*

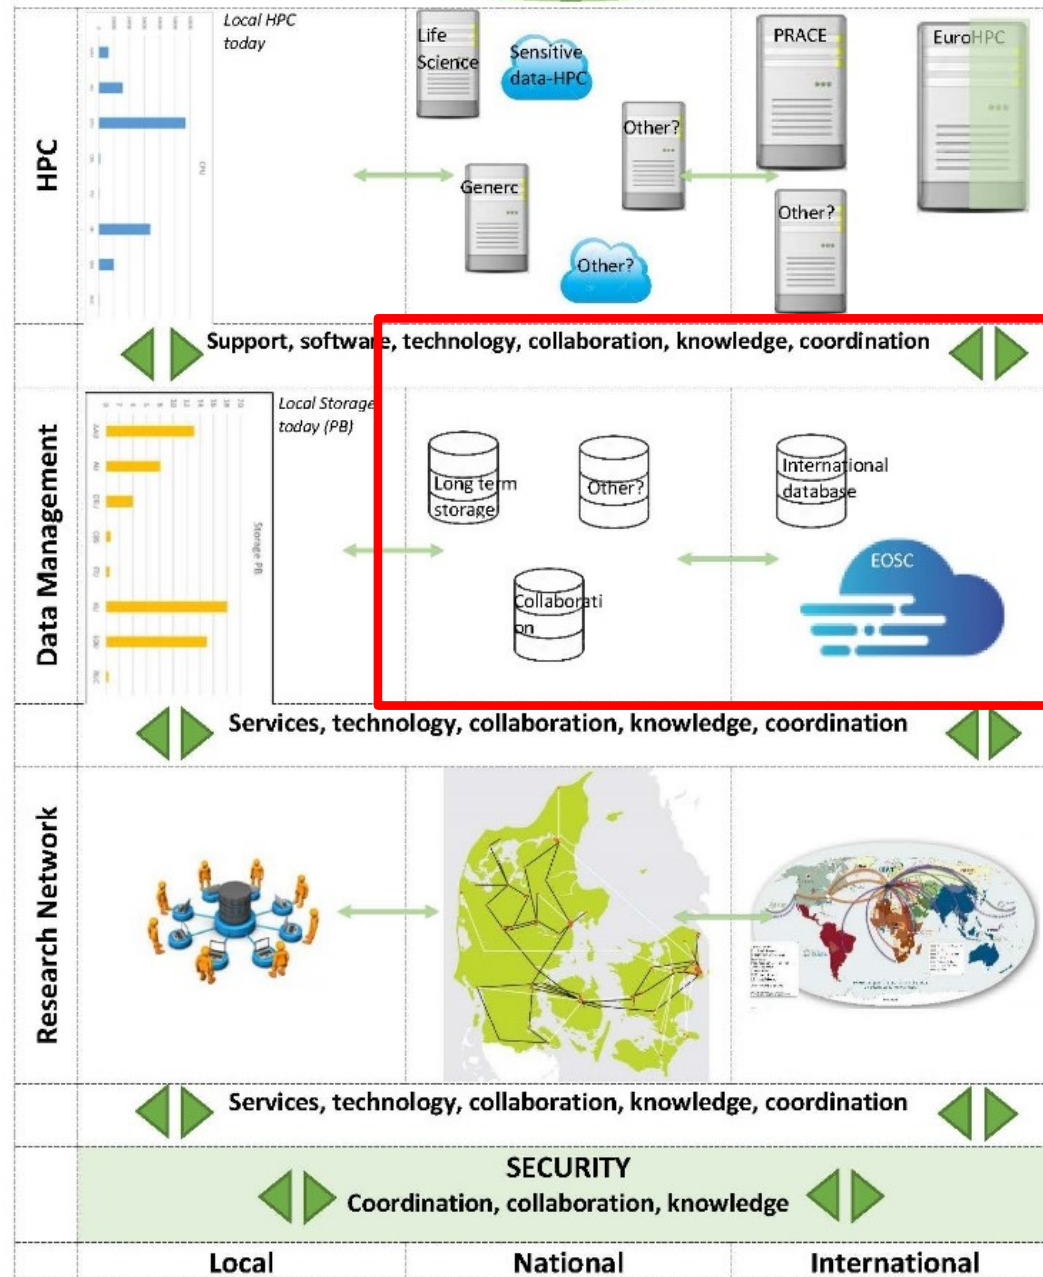

Goal: Through stakeholders and ongoing activities, to describe the status of methods and infrastructure for long-term preservation and initiate a discussion of how to coordinate at the national level. Long-term conservation focuses here on shorter conservation horizons, such as the practices used by the institutions when it comes to archiving data.

### Recommantations:

- > The focus of further work should therefore initially be a closer examination of whether these projects will cover the current unaddressed needs for data storage in the 5-15 year horizon.
- > The concrete possibilities for conservation in the time perspective of 5-15 years should be investigated
- > How is funding secured for infrastructure and related processes?
- > There is a need for a more general political position on preservation beyond the 5 years Support and recognition of already existing initiatives for medium-long-term preservation of data must be ensured
- > A national roadmap for long-term preservation (5-15 years) should be drawn up

**NEED?** **ARTS** **BUSINESS** **HEALTH** **TECHNOLOGY** **SCIENCE**  
 + OTHER COMMON NEEDS

A national data storage system is being tested by friendly users. Ready 2024-Q2.

Trusted repository based on Harvard Dataverse ready when storage system is ready

## ***WG-B: 'Establishing FAIR infrastructure and longterm preservation'***

Goal: Based on a catalog of existing DMP templates, to discuss the possibilities for a coordinated effort to develop and adapt templates.

In a survey organized in collaboration with Working Group A, researchers from seven institutions stated that the template(s) for data management plans that are recommended can be found on DMPonline.

Recommendations:

DMPonline be further promoted as a catalog of active DMP templates and that the institutions should use DMPonline and update, deactivate and share DMP templates through it - until a better alternative exists.

(The Danish version of DMPonline changed name 1<sup>st</sup> October to DeiC DMP)

## **WG-C: 'FAIR financial plan'**

### Goals:

To get an overview of the typical activities and related expenses, necessary to comply with the requirements for organizing research data according to the FAIR principles.

That an overview is created of what each individual fund currently has in terms of policy and/or initiatives that promote FAIR

That a common understanding of the barriers is achieved, e.g. the costs that apply to FAIR and the need for incentives to promote FAIR

That proposals are drawn up across the funds for a joint description of the barriers, e.g. the costs that apply to FAIR and the need for incentives to promote FAIR. Based on this, the foundations can draw up their own policy and practice in the area.

## WG-D: 'Plan for increasing FAIR competencies and knowledge'

### Goals:

To select an already existing framework for FAIR RDM which is recommended to form the starting point for the realization of competence development within FAIR RDM at the individual research institutions.

To achieve consensus on the concept of 'competence development' across research institutions

Prepare proposals for institutions on the use of the chosen framework in the work with competence development at different levels, including proposals for methods for systematic evaluation of goals and efforts aimed at this competence development

Conclusion: There is no common, overarching competence framework for FAIR RDM in Denmark. The working group recommends the *FAIR Competence Framework for Higher Education* (FAIR4HE: <https://doi.org/10.5281/zenodo.4562088> and <https://doi.org/10.5281/zenodo.5665492>) to describe the competencies within FAIR RDM.

## **WG-D: ‘Plan for increasing FAIR competencies and knowledge’**

### **Incentives and barriers for researchers:**

The Working Group recommends creating positive incentives for researchers to cultivate FAIR data practices, for example with the help of success stories such as Working Group A's use cases. It is important to concretize and translate the FAIR principles into a language that takes greater account of the traditions found in certain subjects, perhaps particularly within parts of the social and human sciences.

### **National network for FAIR RDM competence development:**

The working group assesses that there is currently no need to create more professional networks. The National Research Data Management Network can be used as a forum to strengthen and provide content for the national collaboration and promote FAIR RDM competence development in Denmark. The future establishment of a national competence center for data management must also be discussed under the auspices of the National RDM Network based on the results from the Skills4EOSC project.

## **WG-E: 'Security aspects for cooperation on FAIR data'**

### Goal:

Develop a catalog of events and behaviors that can help define the concerns that need to be addressed before data is shared. This is thought broadly in relation to abuse, which goes against the research's basic premise of benefiting society and individuals.

### Considerations:

It is important to get the professional environments at the universities involved to map how data can be misused.

That it should be investigated whether a profile can be made for special subjects, methods or data types that can be used to map when the protection of data requires a high level of **governance**. The **development** of the right governance must ensure that the persons who **gain access** to data are identified and that the use of data is managed in relation to the risk profile of the data accessed.

The universities' ability to deliver a high level of data security is strategically important

> **Action areas for working group F: ‘Value of Data’**

*17. What criteria for data value (curation) and economic models do local, national and international data storage services use to assess data preservation rationale, economics and sustainability?*
